Management And Disposition Of Excess Weapons Plutonium:

Management and Disposition of Excess Weapons Plutonium National Academy of Sciences, Committee on International Security and Arms Control, Panel on Reactor-Related Options for the Disposition of Excess Weapons Plutonium, 1995-08-06 Within the next decade many thousands of U S and Russian nuclear weapons are slated to be retired as a result of nuclear arms reduction treaties and unilateral pledges Hundreds of tons of plutonium and highly enriched uranium will no longer be needed for weapons purposes and will pose urgent challenges to international security This is the supporting volume to a study by the Committee on International Security and Arms Control which dealt with all phases of the management and disposition of these materials This technical study concentrates on the option for the disposition of plutonium looking in detail at the different types of reactors in which weapons plutonium could be burned and at the vitrification of plutonium and comparing them using economic security and environmental criteria Management and Disposition of Excess Weapons Plutonium National Academy of Sciences, Policy and Global Affairs, Office of International Affairs, Committee on International Security and Arms Control, 1994-02-01 Within the next decade many thousands of U S and Russian nuclear weapons are slated to be retired as a result of nuclear arms reduction treaties and unilateral pledges A hundred tons or more of plutonium and tons of highly enriched uranium will no longer be needed The management and disposition of these fissile materials the essential ingredients of nuclear weapons pose urgent challenges for international security This book offers recommendations for all phases of the problem from dismantlement of excess warheads through intermediate storage of the fissile materials they contain to ultimate disposition of the plutonium **Storage and Disposition of Weapons-usable Fissile Materials**, 1996 **Electrometallurgical Techniques for DOE Spent Fuel Treatment** National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Board on Chemical Sciences and Technology, Committee on Electrometallurgical Techniques for DOE Spent Fuel Treatment, 2000-08-11 The Committee on Electrometallurgical Techniques for DOE Spent Fuel Treatment was formed in September 1994 in response to a request made to the National Research Council NRC by the U S Department of Energy DOE DOE requested an evaluation of electrometallurgical processing technology proposed by Argonne National Laboratory ANL for the treatment of DOE spent nuclear fuel Electrometallurgical treatment of spent reactor fuel involves a set of operations designed to remove the remaining uranium metal and to incorporate the radioactive nuclides into well defined and reproducible waste streams Over the course of the committee s operating life this charge has remained constant Within the framework of this overall charge the scope of the committee s work as defined by its statement of task has evolved in response to further requests from DOE as well as technical accomplishments and regulatory and legal considerations As part of its task the committee has provided periodic assessments of ANL s R D program on the electrometallurgical technology Electrometallurgical Techniques for DOE Spent Fuel Treatment assesses the viability of electrometallurgical technology for treating DOE spent nuclear fuel and monitors the

scientific and technical progress of the ANL program on electrometallurgical technology specifically within the context of ANL's demonstration project on electrometallurgical treatment of EBR II SNF. This report evaluates ANL's performance relative to the success criteria for the demonstration project which have served as the basis for judging the efficacy of using electrometallurgical technology for the treatment of EBR II spent nuclear fuel. It also addresses post demonstration activities related to ANL's electrometallurgical demonstration project and makes related recommendations in this area.

Transparency in Nuclear Warheads and Materials Nicholas Zarimpas, 2003. These studies address the technical means and procedures for establishing transparency in nuclear warheads and materials in the nuclear weapons states. **Hearings on National Defense Authorization Act for Fiscal Year 1995--S. 2182 (H.R. 4301) and Oversight of Previously Authorized Programs Before the Committee on Armed Services, House of Representatives, One Hundred Third Congress, Second Session** United States. Congress. House. Committee on Armed Services. Military Application of Nuclear Energy Panel, 1994. *Weekly Information Report*, 1995-05. Nuclear Energy David Bodansky, 2007-06-25. This second edition represents an extensive revision of the first edition though the motivation for the book and the intended audiences as described in the previous preface remain the same. The overall length has been increased substantially with revised or expanded discussions of a number of topics including Yucca Mountain repository plans, new reactor designs, health effects of radiation, costs of electricity and dangers from terrorism and weapons proliferation. The overall status of nuclear power has changed rather little over the past eight years. Nuclear reactor construction remains at a very low ebb in much of the world with the exception of Asia while nuclear power's share of the electricity supply continues to be about 75% in France and 20% in the United States. However, there are signs of a heightened interest in considering possible nuclear growth. In the late 1990s the U.S. Department of Energy began new programs to stimulate research and planning for future reactors and many candidate designs are now contending at least on paper to be the next generation leaders. Outside the United States the commercial development of the Pebble Bed Modular Reactor is being pursued in South Africa; a French-German consortium has won an order from Finland for the long-planned EPR European Pressurized Water Reactor and new reactors have been built or planned in Asia. In an unanticipated positive development for nuclear energy the capacity factor of U.S. reactors has increased dramatically in recent years and most operating reactors now appear headed for 20-year license renewals. **The Future of U.S. Nuclear Weapons Policy** National Academy of Sciences, Committee on International Security and Arms Control, 1997-06-17. The debate about appropriate purposes and policies for U.S. nuclear weapons has been under way since the beginning of the nuclear age. With the end of the Cold War the debate has entered a new phase propelled by the post-Cold War transformations of the international political landscape. This volume based on an exhaustive reexamination of issues addressed in *The Future of the U.S. Soviet Nuclear Relationship* NRC 1991 describes the state to which U.S. and Russian nuclear forces and policies have evolved since the Cold War ended. The book evaluates a regime of progressive constraints

for future U S nuclear weapons policy that includes further reductions in nuclear forces changes in nuclear operations to preserve deterrence but enhance operational safety and measures to help prevent proliferation of nuclear weapons In addition it examines the conditions and means by which comprehensive nuclear disarmament could become feasible and desirable *SIPRI Yearbook 2008* Stockholm International Peace Research Institute,2008 The 39th edition of the SIPRI Yearbook analyses developments in 2007 in Security and conflicts Military spending and armaments Non proliferation arms control and disarmament The SIPRI Yearbook contains extensive annexes on the implementation of arms control and disarmament agreements and a chronology of events during the year in the area of security and arms control **Nuclear**

Energy: Promise Or Peril? C R Hill,A L Mechelynek,Georges Ripka,B C C Van Der Zwaan,1999-08-16 Nuclear energy will inevitably become an important issue worldwide in the 21st century It pollutes the environment with consequences that are highly controversial and it generates plutonium the essential component of nuclear weapons At the same time it is a realistic alternative to at least some of the expected huge increase in global demand for fossil fuel burning which itself is a major source of environmental pollution and not least of greenhouse gases This invaluable book attempts to provide for the non technical reader an objective and critical account of the main issues involved The authors are authorities in their own fields and their contributions have been read in manuscript discussed and criticised by a wider international group of experts Thus whilst much of its contents may arouse controversy the book should be an excellent starting point for informed public discussion of a vitally important topic *Energy and Water Development Appropriations for 2008: Secretary of the Dept. of Energy ... 8. Toxic Waste and Environmental Policy in the 21st Century United States Dianne Rahm,2017-08-24 A major problem confronting the United States in the 21st century is the 20th century's legacy of toxic waste. The weapons that fought the Cold War, the facilities that manufactured those weapons, and the factories that fueled a prosperous economy left behind a trail of pollution. Seven previously unpublished essays examine the problem of toxic waste in the United States: what is being done about it and what should be done about it. W. Henry Lambright and Agnes Gereben Schaefer, Dianne Rahm, Sevim Ahmedov, Charles Davis, Robert A. Simons, and Kimberly Winson, Santa Falcone, and Toddi A. Steelman and JoAnn Carmin write about such issues as community-based environmental management, regional EPA offices, and the regulation of hazardous wastes, brownfields, nuclear and chemical weapons, destruction, environmental contamination, and the nuclear weapons complex, the privatization of nuclear waste, clean up, and WIPP, Yucca, and hazardous waste transport. The future of humanity demands careful thought about these matters. Instructors considering this book for use in a course may request an examination copy here.

Nuclear Safeguards, Security and Nonproliferation James Doyle,2011-04-08 With an increase of global security concerns over potential terrorist acts, the threat of WMDs, and increasing political issues with nations seeking nuclear capability, the need to track, detect, and safeguard nuclear material globally has never been greater. *Nuclear Safeguards, Security and Nonproliferation* is a comprehensive reference that covers cutting-edge technologies used to track and safeguard nuclear material. It is a contributed volume with sections contributed by scientists from leading institutions such as Los Alamos National Labs, Sandia National Labs, Pacific Northwest Nuclear Labs, and Texas A M University and the Monterey Institute of International Studies. The book is divided into 3 sections and includes 30 chapters on such topics as the security of nuclear facilities and material, the illicit trafficking of nuclear materials, improvised nuclear devices, how to prevent nuclear terrorism, international case studies of security at nuclear facilities, and illegal nuclear trade activities. Specific examples of the complex issues surrounding the technology and policy for nuclear material protection, control, and accountability are provided. Specific cases include analysis of the timely issues in the nuclear programs of countries such as North Korea, Iran, and Kazakhstan, among others. *Nuclear Security* is a must-have volume for the dozens of private and public organizations involved in driving Homeland Security domestic and international policy issues relating to nuclear material security, non-proliferation, and nuclear transparency. Written by some of the world's top scientists, including members of the Nuclear Division of Los Alamos National Labs, U.S.A., this timely discussion of current international nuclear security issues includes case studies on Iraq, Iran, and North Korea. The book takes a global perspective on nuclear security and non-proliferation, detailing the little-known, real-world technologies used to secure, detect, and track nuclear material.
