Environmental Assessment of Socioeconomic Systems D. Burkhardt, 2013-03-09 Neglect of the relation between the socio economic system and its natural environment has had detrimental consequences in the past for example the pollution of the natural environment water air and soil by producing using and consuming the products of our industrialized economy the foreseeable exhaustion of natural resources by continuing the increase of industrial production Most of the recent activities both in research and in administration against these impacts have been technically oriented with the aim of stimulating and introducing new technologies of production and new products to diminish the environmental pollution But these efforts which are of course necessary cannot be successful in approaching the aim which should and must in the long term view be defined as the development of society in balance with the natural environment Therefore in addition to an assessment of technologies emphasis should be put on an assessment of socio economic systems On different levels individual and social preferences determine quantities and qualities of production and consumption using economical values e.g. market prices as regulators Following this argumentation an environment assessment of activities against pollution has especially to consider the social response to environmental impacts Of course this topic must be a subject of interdisciplinary research The challenge concerned in this context is to increase the knowledge of the relationship between social economic and technical subsets **Sustainable Development of Energy, Water and Environment Systems** N.H.
