## **Management Of International River Basins And Environmental Challenges:**

**Management of International River Basins and Environmental Challenges**, 1994      **The Ganges Water Diversion: Environmental Effects and Implications** M. Monirul Qader Mirza, 2006-02-03 This book deals with environmental effects on both sides of the border between Bangladesh and India caused by the Ganges water diversion This issue came to my attention in early 1976 when news media in Bangladesh and overseas began publications of articles on the unilateral withdrawal of a huge quantity of water from the Ganges River through the commissioning of the Farakka Barrage in India I first pursued the subject professionally in 1984 while working as a contributor for Bangladesh Today Holiday and New Nation During the next two decades I followed the protracted hydro political negotiations between the riparian countries in the Ganges basin and I traveled extensively to observe the environmental and ecological changes in Bangladesh as well as India that occurred due to the water diversion The Ganges one of the longest rivers of the world originates at the Gangotri glacier in the Himalayas and flows across the plains of North India Eventually the river splits into two main branches and empties into the Bay of Bengal The conflict of diversion and sharing of the Ganges water arose in the middle of the last century when the government of India decided to implement a barrage at Farakka to resolve a navigation problem at the Kolkata Port      **The Law of Non-navigational Uses of International Watercourses** Nahid Islam, 2010-01-01 Presentation de l'auteur Despite Asia's large share of global water resources and the importance of its water for sustaining one of the largest agrarian populations in the world Asia's trans boundary water resource management regimes are poorly developed There are only two working international regimes in South and South east Asia the Mekong and the Indus regimes The remaining international watercourses in Asia are used by riparian countries in a self interested manner without much consideration for the interests of other states or for the environment These national interests do not often represent the interests and needs of the local people This book is divided into three Parts Part I discusses the different contexts of law making in the industrialized west and in agrarian societies in Asia as well as the changing context of law making following the emergence of the concept of sustainable development Part II discusses the regime of international watercourses Part III of the book presents two case studies in Asia the Mekong and the Ganges The main argument is that in the absence of public participation in decision making and resource management the basin states revert to using the watercourses according to the principles of the classical regime The result so far has been unsustainable development environmental degradation and growing poverty of local user communities      **Water Scarcity and Conflict in African River Basins** Mahlakeng Khosi Mahlakeng, 2023-03-31 The book presents a critical and comparative analysis of the hydropolitical landscape of African transboundary river basins which for much of the past century have been affected by water scarcity River and lake basins can become a source of tension and conflict due to a complicated mix of environmental demographic diplomatic historical and geopolitical factors This book however specifically focuses on the important and often under looked role played by

scarcity in generating or exacerbating conflicts in shared river basins Asserting that transboundary river basins tie states into a web of interdependence this book raises awareness of how water scarcity or the depletion of water resources complicates this relationship as nations are forced to look beyond their own borders to meet the demand for water to satisfy multiple needs Taking a comparative approach it examines three shared basins the Orange Senqu the Nile and the Niger River basins While situated in different regions all three basins are marked by serious environmental challenges that are detrimental to combustible hydropolitics over such shared water resources and they provide fascinating insights into the links between climate variability and change water resources human security conflict adaptation and regime capacity Overall this book argues that conflict over transboundary resources can be prevented given the establishment of norms rules and the role of external actors that help regulate state behaviour and control their impacts This book will be of great interest to students and scholars of water resource management hydropolitics environmental conflict resource scarcity and international relations It will also be of interest to policymakers involved in transboundary water resource governance

River Basin Organizations in Water Diplomacy Anoulak Kittikhoun, Susanne Schmeier, 2020-11-19 Will tensions and disputes among states sharing international water courses and lakes turn into active conflicts Addressing this question the book shows that these concerns are more prominent due to the locations and underlying political dynamics of some of these large rivers and the strategic interests of major powers Written by a combination of leading practitioners and academics this book shows that states are more prone to cooperate and manage their transboundary issues over the use of their common water resources through peaceful means and the key institutions they employ are international river basin organizations RBOs Far from being mere technical institutions RBOs are key mechanisms of water diplomacy with capacity and effectiveness varying on four key interrelated factors their legal and institutional development and the influence of their technical and strategic resources The basins analyzed span all continents from both developed and developing basins including the Columbia Great Lakes Colorado Senegal Niger Nile Congo Jordan Helmand Aral Sea Mekong Danube and Rhine Contributing to the academic discourse on transboundary water management and water conflict and cooperation the book provides insights to policy makers on which water diplomacy engagements can be successful the strengths to build on and the pitfalls to avoid so that shared water resources are managed in a cooperative sustainable and stable way

Environmental Challenges and Governance Sacchidananda Mukherjee, Debashis Chakraborty, 2015-03-02 The economies located in East South and Southeast Asia have witnessed an interesting growth sustainability trade off over the last decades While growth considerations have paved ways for deepened ties with growing trade investment waves and increasing population pressure necessitated exploitation of hitherto unutilized natural resources focus on environmental sustainability has been a recent consideration The growth impetus still playing a key role in these economies it becomes imperative that the countries effectively address the key sustainability concerns e g air and water pollution land degradation loss of

biodiversity climate change issues like CO2 emissions etc But how prepared is the governance mechanism of these countries covering not only the legislative and administrative framework but also involvement of the judiciary presence of spirited civil society and active engagement of stakeholders in policy framing dialogues to rise up to these challenges The book seeks an answer to this question through the environmental governance mechanism and natural resource conservation policies in three vibrant regions within Asia A holistic development dimension of sustainable development path emerges through discussion of policies adopted by developed Japan South Korea upper middle China Malaysia developing India Indonesia Philippines Sri Lanka Thailand and least developed countries Bangladesh Myanmar Nepal

*River Basins and International Relations* Christian Ploberger, 2023-06-08 This book argues that river basins represent a particular structural setting in international relations with the potential for generating a dynamic of cooperation among the involved countries The volume applies the concept of regional cooperation to international river basins to highlight their relevance as a particular space in international relations emphasizing both the inter connectivity and transnationalism of international river basins It addresses the challenges related to resource distribution between up and down stream countries showcasing a variety of examples of cooperation and conflictual relations within various international river basins Case studies are drawn from across the globe and include the Mekong the Indus the Euphrates Tigris and the Danube international river basins Each chapter outlines the different aspects which support or undermine cooperation in each case taking into consideration key areas surrounding resource sharing national development environmental considerations and national security This book will be of great interest to students and scholars with an interest in international river basins regional cooperation water resource competition international relations and environmental politics

A. Salman,2009 This book deals with the evolution and context of the Bank policy for projects on international waterways It starts with a brief description of how the Bank faced the challenges stemming from such projects and the different approaches deliberated by the Bank that led to the issuance of the first policy in 1956 The Book then reviews the

implementation experience and analyzes the principles and procedures as well as the main features of each of the policies issued in 1956 1965 and 1985 The principles of international water law prevailing at each stage of the policy updates are examined and

**Report of the International Consultations on Partnership in the Water Sector for Cities in Africa** United Nations Centre for Human Settlements, United Nations Development Programme, 1997

**Challenges to International Waters** United Nations Environment Programme, Global International Waters Assessment, 2006 The GIWA Final Report provides a comprehensive review of the most important findings from the GIWA regional reports It summarises the major transboundary concerns and their environmental and socio economic impacts To better understand these concerns and develop solutions to address them the Report identifies the root causes and draws policy relevant conclusions It also outlines knowledge gaps which impede the sustainable management of international waters

**Environmental Concerns and Sustainable Development** Vertika Shukla, Narendra Kumar, 2019-07-03 The prevailing global environmental crisis is primarily because of non standardized parameters for environmental regulation Unplanned expansion of economic activities consideration for environmental conservation and several associated problems are emerging due to degradation in quality of ambient environment such as clean air safe drinking water and quality of food particularly in developing nations Due to poor casual execution of EIA protocol newly developing countries are preferred destination for establishing pollution emitting industries which results in degradation and depletion of natural resources Lack of environmental policy intervention is another major attraction for establishing such industries in these nations In order to ensure sustainable development the highest priority issues include the monitoring and eradication of environmental problems which arise due to economic development Initiation of any form of economic development primarily results in loss of forests and thus biodiversity followed by deterioration in quality of air and contamination of natural resources The worst impact of non standardized economic development is the contamination of air water and soil Sustainable development ensures responsible interface with the environment to minimize the depletion or degradation of natural resources and ensure long term environmental quality It involves integrated approaches in understanding the importance of environmental management systems and policy inventions leading to improved environmental performance The present book is proposed to address the environmental concerns associated with economic development and approaches involved to attain sustainable economic development which include monitoring of the quality of air deforestation quality of water resources soil erosion and degradation of the natural environment

*Africa Water Atlas* United Nations Environment Programme, 2010 This Africa Water Atlas is a visual account of Africa s endowment and use of water resources revealed through 224 maps and 104 satellite images as well as some 500 graphics hundreds of compelling photos plus a brief profile of the water situation in every country These visual elements vividly illustrate a succinct narrative describing and analysing Africa s water issues and exemplifying them through the judicious use of case studies The Atlas tells the paradoxical story of a continent with adequate renewable water resources

but unequal access because the water is either abundant or scarce depending on the season or the place it explores the opportunities to develop Africa's untapped water resources and human capacities to deliver safe drinking water and sanitation services to achieve the water related Millennium Development Goals As well as hydropower and irrigation services that help support livelihoods and boost economic development

**Proceedings of The 3rd International Conference on Climate Change and Ocean Renewable Energy** Joan Cecilia Casila, Anupam Khajuria, Saim Memon, 2025-08-19 This book promotes policy frameworks and economic models facilitating large scale ocean renewable energy deployment Renewable energy refers to power generated from naturally replenished resources like sunlight wind rain tides waves and geothermal heat These sources are abundant and sustainable on a human timescale making them crucial in addressing global energy needs According to BP's 2018 Energy Outlook renewable energy is set to grow fivefold by 2040 contributing about 14% of global primary energy This growth is pivotal as climate change driven by rising global temperatures poses severe risks to humans and ecosystems The transition to renewable energy including biofuels offers a critical solution to mitigate these impacts By reducing reliance on fossil fuels we can help slow the progression of climate change In the past renewables were seen as costly but advancements in clean energy technology are making them more affordable This cost reduction is accelerating the global shift toward renewable energy promoting sustainable economic growth and reducing environmental harm caused by fossil fuel dependency The future of energy lies in harnessing these renewable resources

International Law and the Resolution of Central and East European P. Williams, 2000-07-18 This book takes an interdisciplinary approach to the question of what role international law plays in promoting a resolution of Central and East European transboundary environmental disputes The author examines a wide variety of environmental disputes in Central and Eastern Europe with particular emphasis on the Gabčíkovo-Nagymaros Project dispute between Slovakia and Hungary and melds international legal theory and international relations theory to develop an analytic framework for understanding the role of law and assessing its future application

**Transboundary Water Issues in Israel, Palestine, and the Jordan River Basin** David B. Brooks, Julie Trottier, Giulia Giordano, 2019-10-11 This book highlights the search for permanent freshwater agreements between Israel Palestine and the western portions of Jordan and underscores the benefits of shared water management among the three countries Throughout the book efforts are made to share transboundary water in ways that are simultaneously physically feasible ecologically sustainable and socially equitable Thanks to the Peace Treaty between Israel and Jordan the management of shared water resources has been working well though future relationships are uncertain at present However the current arrangements for Israel and Palestine are at best inadequate and in some cases counterproductive In closing the book argues that trilateral agreements on water can and should be concluded now before seeking to resolve the full range of issues that remain uncertain in a Final Status Agreement between Israel and Palestine

Managing and Transforming Water Conflicts Jerome Delli Priscoli, Aaron T. Wolf, 2010-02-04 What is the one thing that no

one can do without Water Where water crosses boundaries be they economic legal political or cultural the stage is set for disputes between different users trying to safeguard access to a vital resource while protecting the natural environment Without strategies to anticipate address and mediate between competing users intractable water conflicts are likely to become more frequent more intense and more disruptive around the world In this book Delli Priscoli and Wolf investigate the dynamics of water conflict and conflict resolution from the local to the international They explore the inexorable links between three facets of conflict management and transformation Alternative Dispute Resolution ADR public participation and institutional capacity This practical guide will be invaluable to water management professionals as well as to researchers and students in engineering economics geography geology and political science who are involved in any aspects of water management
