Management Of Irrigation And Drainage Systems:

Management of Irrigation and Drainage Systems Hector M. Malano, Paul van Hofwegen, 1999-01-01 This monograph provides an overview of the principles required for a service orientation in the management of irrigation and drainage systems The material covered is designed to emphasize an area largely neglected in the irrigation and drainage management literature The dominating philosophy underlying this book is that irrigation and drainage systems must be managed as a service business responsive to the needs and changing requirements of its customers It is postulated that this service approach to the management of irrigation and drainage systems constitutes a key element of the strategy that is needed to improve the current level of performance of many irrigation and drainage systems worldwide Enhanced performance of irrigation is a prerequisite if we are to face the enormous challenge of producing greater quantities of food to meet the demand of a growing population This is particularly the case in an environment with increasing competition for water from industry and urban water users set against mounting concerns about environmental sustainability

Irrigation Management Martin Burton, 2010 In many countries irrigated agriculture consumes a large proportion of the available water resources often over 70% of the total There is considerable pressure to release water for other uses and as a

sector irrigated agriculture will have to increase the efficiency and productivity of its water use This is particularly true for manually operated irrigation systems managed by government agencies which provide water for a large number of users on small landholdings and represent 60% of the total irrigated area worldwide Drawing on the author's 30 years of experience in some 28 countries this book offers knowledge of the management of irrigation and drainage systems including traditional technical areas of systems operation and maintenance and expanding managerial institutional and organizational aspects Chapters provide guidelines to improve management operation and maintenance processes which move management thinking out of traditional public sector mindsets to a more customer focused performance oriented service delivery As a practical guide to improve efficiency and productivity in irrigated agriculture this book will be essential reading for irrigation managers and technicians as well as students and policy makers in water management agriculture and sustainable development
