Natural Resource Management:

Natural Resource Leadership and Management Frederick Cubbage, 2021-11-25 This book examines leadership and management in natural resources drawing on literature principles and the author's own experiences as a leader and activist. Developing a general framework summarizing the leadership and management cycle in natural resources for practitioners, the book provides a synthesis of leadership theory and practice stemming from the personal and spiritual values of work and the key principle of aligning organizational resources and actions with stated intentions. It discusses the somewhat unique context of natural resources comprised of private and public goods and services and complex societal values. Key strategies that enable natural resource professionals to be leaders at all stages and positions in their career, including vision and sustainability, proficient human resources management, fairness and merit, and transparency and openness, are analyzed. Case studies of famous natural resource leaders and activists, including Ding Darling, David Attenborough, Wangari Maathai, Marina de Silva, Greta Thunberg, Bob Brown, and Christina Koch, are included. The book examines their values, training, and principles and how they influenced national or global natural resource management. Drawing on the author's own experiences as a leader and activist, including his role as Department Head at North Carolina State University, as an elected officer in the Society of American Foresters, and as an activist opposing the sale of the Hofmann Forest, the book provides practical examples and guidelines that professionals can consider and use in their careers. This book will be of great interest to natural resource managers and professionals as well as students studying environmental management and natural resource governance and to practitioners who are looking to develop broader leadership and management skills. Alan W. Ewert, 2021-11-28 Written by and for scholars, planners, and policymakers. *Natural Resource Management: The Human Dimension* focuses on issues such as the public's role in the decision-making processes of ecosystem management that affect how we use or abuse resources. It exposes the reader to a wide variety of applications of Human Dimensions Research as well as to significant issues involved. One of the greatest needs in natural resource management is for a deeper understanding of the intricate relationship between humans and the natural environment. Human Dimensions Research, an interdisciplinary field involving a broad variety of social science approaches, seeks to fill this need by providing multidimensional assessments of people's behavior, attitudes, and expectations toward natural resources and their uses. Written by and for scholars, planners, and policymakers, *Natural Resource Management: The Human Dimension* focuses on issues such as the public's role in the decision-making processes of ecosystem management that affect how we use or abuse resources. It exposes the reader to a wide variety of applications of Human Dimensions Research as well as to significant issues involved. At a time when we are either loving our forests and parks to death or paving them over, a better understanding of the problems is critical if we are to create workable policies that will preserve and protect our natural resources. *Sustainable Natural Resource Management*

Applying Ecosystem and Landscape Models in Natural Resource Management Robert E. Keane, 2019. Managing today's lands is becoming an increasingly difficult task. Complex ecological interactions across multiple spatiotemporal scales create diverse landscape responses to management actions that are often novel, counterintuitive, and unexpected. To make matters worse, exotic invasions, human land use, and global climate change complicate this complexity and make past observational ecological studies limited in application to the future. Natural resource professionals can no longer rely on empirical data to analyze alternative actions in a world that is rapidly changing with few historical analogs. New tools are needed to synthesize the high complexity in ecosystem dynamics into useful applications for land management. Some of the best new tools available for this task are ecological and landscape simulation models. However, many land management professionals and scientists have little expertise in simulation modeling, and the costs of training these people will probably be exorbitantly high because most ecosystem and landscape models are exceptionally complicated and difficult to understand and use for local applications. This book was written to provide natural resource professionals with the rudimentary knowledge needed to properly use ecological models and then to interpret their results. It is based on the lessons learned from a career spent modeling ecological systems. It is intended as a reference for novice modelers to learn how to correctly employ ecosystem landscape models in natural resource management applications and to understand subsequent modeling results.

A New Century for Natural Resources Management Richard L. Knight, Sarah F. Bates, 1995-03. This book explores the changes that are leading to a new century of natural resources management. It places the current situation in historical perspective, analyzes the forces that are propelling change, and describes and examines the specific changes in goals, policy, and practice that are transforming all aspects of natural resources management. The book is an important overview for wildlife biologists, foresters, and others working for public land agencies, professors, and students of natural resources, and all those whose livelihood depends on the use of public natural resources.

Community-Based Natural Resource Management in Southern Africa Center for African Studies at the University of Florida, 2013-06-05. Community-based natural resource management (CBNRM) is a compelling concept if people are allowed to be custodians of their resources; better management of the resources will result. CBNRM is much more complex and challenging than has commonly been understood but can provide a way to achieve a more equitable and sustainable approach to the use of natural resources. This book has a focus on Southern Africa. It is aimed at students of

natural resource management including undergraduates conservation practitioners and development sector implementing agents It is theoretically grounded but has a major applied focus with respect to understanding the why what and how of CBNRM in order to more effectively guide natural resource management It is not a manual with explanatory details about implementation measures rather it helps the reader to understand the complexity of CBNRM and provides a guide to other resources that will assist in enhancing learning Part I consists of ten chapters After introducing the CBNRM concept consideration is given to the following History as a Determinant of Progress Economic Foundations Well Being Livelihoods and Business Institutions and Governance Stakeholder Analysis Adaptive Management Capacity Development and Learning and Communication for Effective Implementation Part II is devoted to eight case studies from the Southern Africa region that illustrates some of the issues considered in Part I They are included to provide material that can be used as site specific examples and teaching aids to complement general discussion of the issues
