Forthcoming Books Rose Arny, 2001 Resource Management Performance: A Sectoral Analysis in the Post-Conflict Kurdistan Region of Iraq Goran M. Muhamad, Nabaz T. Khayyat, 2024-12-23 This book investigates the intricacies of resource management performance across various sectors within the Kurdistan Region of Iraq With 13 in depth studies it examines the region's evolution from an agricultural society to an emerging market since the collapse of the Saddam Hussein regime in 2003 Oil and gas revenue comprising over 85 percent of fiscal revenues has attracted multinational companies and international humanitarian organizations although external factors such as the ISIS conflict and global economic downturns have hindered their performance Additionally conflicts with Baghdad and the fallout of the ISIS war have led to double

embargoes and economic crises exacerbated by the region's provision for 2 million refugees and internally displaced persons. International entities like the IOM and UNDP have played vital roles in supporting the region's development amid these challenges. Despite these obstacles, the Kurdistan Region demonstrates significant economic potential. By scrutinizing resource management in sectors such as education and electricity, this book offers valuable insights and policy recommendations for researchers, decision makers, and organizations invested in the region's growth and stability.

Prospects for Adaptive and Sustainable Livelihoods for the Indigenous Peoples of Africa Costantinos

Berhutesfa, 2024-12-20. Beginning in the early 1990s, Africa has been experiencing a major groundswell of social, economic, and political changes. An array of declarations and communiqués notwithstanding, the crisis has forced indigenous peoples to become chronically dependent on international charity. This is one of the greatest tragedies of the 21st century. This book is a result of research conducted across Africa beginning in 2003 that was invaluable in understanding the conditions and views of indigenous peoples who are the victims rather than the beneficiaries of land grabbing and infrastructure development. The book highlights the impediments to the livelihoods that indigenous peoples had developed over centuries brought about by political change. It also proposes various local and regional actions to mitigate this, which aim to simultaneously enhance climate resilience, productivity, and access to adequate stocks, goods, and services.

Navigating Social-Ecological Systems Fikret Berkes, Johan Colding, Carl Folke, 2008-04-24. In the effort towards sustainability, it has become increasingly important to develop conceptual frames to understand the dynamics of social and ecological systems. Drawing on complex systems theory, this book investigates how human societies deal with change in linked social-ecological systems and build capacity to adapt to change. The concept of resilience is central in this context. Resilient social-ecological systems have the potential to sustain development by responding to and shaping change in a manner that does not lead to loss of future options. Resilient systems also provide capacity for renewal and innovation in the face of rapid transformation and crisis. The term 'navigating' in the title is meant to capture this dynamic process. Case studies and examples from several geographic areas, cultures, and resource types are included, merging forefront research from natural sciences, social sciences, and the humanities into a common framework for new insights on sustainability.

Application of Threshold Concepts in Natural Resource Decision Making Glenn R. Guntenspergen, 2014-02-07 Natural resource managers face a complex decision making environment characterized by the potential occurrence of rapid and abrupt ecological change These abrupt changes are poorly accommodated by traditional natural resource planning and decision making processes As recognition of threshold processes has increased contemporary models of ecological systems have been modified to better represent a broader range of ecological system dynamics Key conceptual advances associated with the ideas of non linear responses the existence of multiple ecological stable states and critical thresholds are more likely the rule than the exception in ecological systems Once an ecological threshold is crossed the ecosystem in question is not likely to return to its previous state There are many examples and a general consensus that climatic disruptions will drive now stable systems across ecological thresholds This book provides professional resource managers with a broad general decision framework that illustrates the utility of including ecological threshold concepts in natural resource management It gives an entry into the literature in this rapidly evolving concept with descriptions and discussion of the promising statistical approaches for threshold detection and demonstrations of the utility of the threshold framework via a series of case studies
