Conser, 1993 In his revisionist evaluation Conser reveals the strategies by which a diverse group of influential Protestant theologians energetically reconciled pre Darwinian science with traditional Christian beliefs and in doing so shaped the antebellum discussion of science and religion 10 halftone illustrations Spiritual Law in the Natural World Frederick W. Grant, 2015-02-07 Introduction to Spiritual Law in the Natural World Scripture as a Source of Knowledge God's Twofold Witness Nature in Scripture Natural Mathematics Spiritual Mathematics Tones and Undertones The Kingdoms of Nature Animal and Human Classification Among the Creatures Life in its Lowest Circle God and the Natural World Ted Peters, Marie Turner, 2020-05-01 This collection of essays is a fitting tribute to Denis Edwards who was one of Australia's leading theologians In exploring the most challenging questions of our time these essays canvas some of the great themes of Christian theology that were the focus of Edwards' research Denis Edwards was a theologian of dialogue dialogue with our rich theological tradition dialogue with science dialogue with contemporary theologians The contributors to this volume enter into a dialogue with substantial parts of the theological output of Denis Edwards In the process they capture something of his humanity his love of creation and his concern for our common home The book demonstrates the commitment Denis Edwards had to a theology that is truly ecumenical and always learning from the insights of others The editors and authors have done a great service in helping many others to deepen reflection on Denis Edwards' contribution to our understanding of God and the natural world Everyday Nature: Knowledge of the Natural World in Colonial New York, 2007 In *Everyday Nature* Sara Gronim shows how scientific advances were received in the early modern world from the time Europeans settled in America until just before the American Revolution Settlers approached a wide range of innovations such as smallpox

inoculation maps and surveys Copernican cosmology and Ben Franklin's experiments with electricity with great skepticism New Yorkers in particular were distrustful because of the chronic political and religious factionalism in the colony Those discoveries that could be easily reconciled with existing beliefs about healing the sick agricultural practices and the revolution of the planets were more readily embraced

Leibniz and the Natural World Pauline Phemister, 2006-03-30 In the present book Pauline Phemister argues against traditional Anglo American interpretations of Leibniz as an idealist who conceives ultimate reality as a plurality of mind like immaterial beings and for whom physical bodies are ultimately unreal and our perceptions of them illusory Re-reading the texts without the prior assumption of idealism allows the more material aspects of Leibniz's metaphysics to emerge Leibniz is found to advance a synthesis of idealism and materialism His ontology posits indivisible living animal like corporeal substances as the real metaphysical constituents of the universe his epistemology combines sense experience and reason and his ethics fuses confused perceptions and insensible appetites with distinct perceptions and rational choice In the light of his sustained commitment to the reality of bodies Phemister re-examines his dynamics the doctrine of pre-established harmony and his views on freedom The image of Leibniz as a rationalist philosopher who values activity and reason over passivity and sense experience is replaced by the one of a philosopher who recognises that in the created world there can only be activity if there is also passivity minds souls and forms if there is also matter good if there is evil perfection if there is imperfection

Exploring Nature's Tapestry: A Journey through the Natural World Jhumur Akhter Riya, 2023-10-16 In the early hours of dawn the wilderness stirs from its slumber The air is crisp carrying with it the earthy scent of dew-kissed leaves and the sweet melodies of awakening birds As the first rays of sunlight pierce the canopy the forest floor comes alive with a symphony of life Here in this untouched wilderness the intricate dance of nature unfolds The Amazon rainforest one of the world's most diverse ecosystems serves as a perfect canvas for the start of our journey Towering trees draped in vines and moss reach for the sky Exotic birds in vibrant plumage take flight their calls echoing through the verdant cathedral As we venture deeper we encounter ancient tribes and rare creatures each with a unique role in this thriving ecosystem In the heart of the African savannah the sun casts its golden glow over endless grasslands The roar of a lion the trumpeting of elephants and the thundering hooves of wildebeests fill the air The savannah is a testament to the interplay of predator and prey a delicate balance that has sustained life for centuries The wilderness awakens not only with sights and sounds but also with stories of resilience survival and the beauty of biodiversity As we journey deeper into these pristine landscapes we begin to unravel the secrets that make the wilderness such a captivating and vital part of our natural world

A Minimalist Ontology of the Natural World Michael Esfeld, Dirk-Andre Deckert, 2017-10-25 This book seeks to work out which commitments are minimally sufficient to obtain an ontology of the natural world that matches all of today's well-established physical theories We propose an ontology of the natural world that is defined only by two axioms 1 There are distance relations that individuate simple objects namely matter

points 2 The matter points are permanent with the distances between them changing Everything else comes in as a means to represent the change in the distance relations in a manner that is both as simple and as informative as possible The book works this minimalist ontology out in philosophical as well as mathematical terms and shows how one can understand classical mechanics quantum field theory and relativistic physics on the basis of this ontology Along the way we seek to achieve four subsidiary aims a to make a case for a holistic individuation of the basic objects ontic structural realism b to work out a new version of Humeanism dubbed Super Humeanism that does without natural properties c to set out an ontology of quantum physics that is an alternative to quantum state realism and that avoids any ontological dualism of particles and fields d to vindicate a relationalist ontology based on point objects also in the domain of relativistic physics
