## **Natural Language Based Computer Systems Natural Communication With Computers:**

Natural Language at the Computer Albrecht Blaser, 1988 Volume 19 of Group III Crystal and Solid State Physics deals with the magnetic properties of metals alloys and metallic compounds The amount of information available in this field is so substantial that several subvolumes are needed to cover it all The first subvolumes treat the intrinsic magnetic properties i e those magnetic properties which depend only on the chemical composition and the crystal structure So far subvolumes III 19a III 19b and III 19c have appeared Data on the properties that depend on the preparation of the samples measured as for instance thin films or amorphous alloys and the magnetic alloys used in technical applications are being compiled in the last subvolumes of III 19 In the first of these subvolume III 19g magnetic properties are given for several major types of crystalline and amorphous thin magnetic films that are supported by a substrate and for which a more or less coherent group of data is available The properties of sputtered metallic amorphous films containing 3d transition elements will be dealt with in the following subvolume

**Formalization of Natural Languages** P. Kümmel, 2013-03-12 The attempt to simulate dialogues in Natural Language by a machine requires extensive analyses of Natural Language s expression and content phenomena Carefully deducted natural laws must be extracted A division of all

existing Natural Languages into carrier systems of a agglutinated and b isolated morphological structures appears to be of principal significance Thus morphology can be clearly separated from syntax While morphology concerns structural phenomena syntax refers to functional customs and rules of language expressions Expression morphologies of usual language systems like English French German or Russian exhibit tightly agglutinated characteristics A smaller portion of Natural Language carrier systems provides morphologies of considerably less degrees of agglutination Among them are ideographic pictographic and gesture systems as well as air controller and children languages within a certain phase of development Sometimes fully self explanatory or content related expression units within carrier systems of isolated morphologies guarantee significant insights into phenomena of Natural Language s content Therefore evaluations on Natural Language expression structures can never be limited exclusively to auditive and phonographic morphologies They also incorporate transport means of ideo and pictogenetic characteristics in order to evaluate morphology and syntax distinctively The process of formalizing Natural Languages is highly interdisciplinary It consists of 1 analyzing 2 possible enumerating 3 optimizing and 4 synthesizing procedures Irrelevant domains of formalization excesses are avoided by keeping strictly to definitions demarcating natural from artificial languages Comparative evaluations of agglutinated as well as isolated morphologies are necessary
