

- 3) Pericyclic reactions also occur in several biological processes. The reaction below is a step in the synthesis of aromatic amino acids (the shikimic acid pathway). This pathway is a target for herbicides like Roundup (mammals get their aromatic amino acids from their diet instead). Provide a mechanism and reaction type (be as specific as possible) for the transformation below. Note that pericyclic reactions go through a cyclic transition state, but do not necessarily produce a new ring in the product.

Taking into account the current excitement in the field of marine biotechnology this Special Issue entitled *Genome Mining and Synthetic Biology in Marine Natural Product Discovery* aims to assess the impact of these molecular approaches on the discovery of bioactive compounds from marine organisms. The term genome mining is used to identify all bioinformatic investigations aimed at detecting the biosynthetic pathways of bioactive natural products and their possible functional and chemical interactions. Several studies are now reporting on marine organisms. Oceans cover nearly 70% of the Earth's surface and host a huge ecological chemical and biological diversity. The natural conditions of the sea favor in marine organisms the production of a large variety of novel molecules with great pharmaceutical potential. Marine organisms are unique in their structural and functional features compared to terrestrial ones. Innovation in this field is very rapid as revealed by the funding of several Seventh Framework Programme FP7 and Horizon 2020 projects under the topic Blue Growth with the urgent goal of discovering new drugs.
