## **Naturalizing Phenomenology Issues In Contemporary Phenomenology And Cognitive Science Writing Science:**

Naturalizing Phenomenology Jean Petitot, 1999 This ambitious work aims to shed new light on the relations between Husserlian phenomenology and the present day efforts toward a scientific theory of cognition with its complex structure of disciplines levels of explanation and conflicting hypotheses The book s primary goal is not to present a new exegesis of Husserl s writings although it does not dismiss the importance of such interpretive and critical work Rather the contributors assess the extent to which the kind of phenomenological investigation Husserl initiated favors the construction of a scientific theory of cognition particularly in contributing to specific contemporary theories either by complementing or by questioning them What clearly emerges is that Husserlian phenomenology cannot become instrumental in developing cognitive science without undergoing a substantial transformation Therefore the central concern of this book is not only the progress of contemporary theories of cognition but also the reorientation of Husserlian phenomenology Because a single volume could never encompass the numerous facets of this dual aim the contributors focus on the issue of naturalization This perspective is far reaching enough to allow for the coverage of a great variety of topics ranging from general structures of intentionality to the nature of the founding epistemological and ontological principles of cognitive science to analyses of temporality and perception and the mathematical modeling of their phenomenological description This book then is a collective reflection on the possibility of utilizing a naturalized Husserlian phenomenology to contribute to a scientific theory of cognition that fills the explanatory gap between the phenomenological mind and brain

**Phenomenology or Deconstruction?** Christopher Watkin, 2009-03-03 Phenomenology or Deconstruction challenges traditional understandings of the relationship between phenomenology and deconstruction through new readings of the work of Maurice Merleau Ponty Paul Ricur and Jean Luc Nancy A constant dialogue with Jacques Derrida s engagement with phenomenological themes provides the impetus to establishing a new understanding of being and presence that exposes significant blindspots inherent in traditional readings of both phenomenology and deconstruction In reproducing neither a stock phenomenological reaction to deconstruction nor the routine deconstructive reading of phenomenology Christopher Watkin provides a fresh assessment of the possibilities for the future of phenomenology along with a new reading of the deconstructive legacy Through detailed studies of the philosophy of Merleau Ponty Ricur and Nancy he shows how a phenomenological tradition much wider and richer than Husserlian or Heideggerean thought alone can take account of Derrida s critique of ontology and yet still hold a commitment to the ontological This new reading of being and presence fundamentally re draws our understanding of the relation of deconstruction and phenomenology and provides the first sustained discussion of the possibilities and problems for any future deconstructive phenomenology

**Phenomenalism, Phenomenology, and the Question of Time** Adam Berg, 2015-12-15 Phenomenalism Phenomenology and the Question of Time A Comparative Study of the Theories of Mach Husserl and Boltzmann analyzes two interconnected themes the split between phenomenalism and phenomenology and the question of time in relation to physical processes and irreversibility in physics The first theme is the overlooked connections between the modern phenomenology of Edmund Husserl and his mentor Franz Brentano and phenomenalism as associated with Ernst Mach The book s historical conceptual perspective draws attention to the ways in which Husserl s twentieth century advance of phenomenological method was conceived in relation to Mach s late nineteenth century and early twentieth century work both in science and philosophy At first glance Mach s phenomenalism appears to be in stark contrast to Husserl s phenomenology but on closer inspection it influenced and informed its inception By analyzing Husserl s revolutionary method of phenomenology in connection to Mach s earlier conceptions the book elucidates the rise of modern physics especially through the work of Ludwig Boltzmann as an important context to both Mach s philosophical work and Husserl s early overtures into phenomenology and his later critique of the crisis of European sciences The discursive affinities and differences between phenomenalism and phenomenology are examined in terms of a more contemporary debate over naturalizing phenomenology either as a method continuous with science or reduced to it This immanent tension is examined and evaluated specifically through the second thematic axis of the book which deals with the question of time and irreversibility Time in physics conforms to an explanatory scheme that relegates the issues of directionality and

symmetry of time to concepts that are radically different from any phenomenological attempts to explain temporality in terms of intuition and consciousness. It is precisely through the notion of irreversibility that both perspectives—scientific and phenomenological—explicate time's arrow not as a mere manifestation of sensory asymmetry as Mach would have it but rather through indirect descriptions of time and temporal objects. The issue of time's arrow, irreversibility, and Boltzmann's physical hypotheses regarding the nature of time are introduced and comparatively assessed with Husserl's work on phenomenology and the role of temporality to consciousness.

**Big Data—A New Medium?** Natasha Lushetich, 2020-11-26. Drawing on a range of methods from across science and technology studies, digital humanities, and digital arts, this book presents a comprehensive view of the big data phenomenon. Big data architectures are increasingly transforming political questions into technical management by determining classificatory systems in the social, educational, and healthcare realms. Data and their multiple arborisations have become new epistemic landscapes. They have also become new existential terrains. The fundamental question is: can big data be seen as a new medium in the way photography or film were when they first appeared? No new medium is ever truly new. It's always remediation of older media. What is new is the medium's rearticulation of the difference between here and there, before and after, yours and mine, knowable and unknowable, possible and impossible. This transdisciplinary volume incorporating cultural and media theory, art philosophy, history, and political philosophy is a key resource for readers interested in digital humanities, cultural and media studies.

Enacting Musical Time Mariusz Kozak, 2020. A compelling approach among works on temporality, phenomenology, and the ecologies of the new sound worlds. *Liberating the Economy from the Market* Leonardo Lavanderos, Alejandro Malpartida, 2025-04-24. Authors Leonardo Lavanderos and Alejandro Malpartida dismantle the ideological scaffolding of contemporary capitalism, exposing its structural contradictions and radical disconnection from the conditions that sustain life. This book is not merely a critique; it deconstructs and reconfigures, proposing an economy that transcends the reductionist mechanics of supply and demand in order to restore the essential link between culture and nature. The authors discuss how conventional economics, obsessed with abstract metrics and empty indicators, erased the relational and ecological dimensions that underpin the viability of both human and non-human communities. The book is an intellectual rebuff to those who have turned the economy into a machine of entropy, uprooting and devastation. Drawing from the concept of *ecopoiesis*, the authors call for a paradigmatic shift toward a regenerative, relational, and systemically sustainable economy. An essential text for students and researchers in economics.
