and practices across rural and urban landscapes natural and cultural systems stressing heterogeneity and complexity The book focuses on the nature culture interface conceptualised as a place where experiences practices policies ideas and knowledge meet are negotiated discussed and resolved Rather than looking for lost unities or an imaginary view of harmonious relationships between humans and nature based in the past it explores cases of interfaces that are context sensitive and which consciously convey the problems of scale and time While calling attention to a cultural or culturalised view of the sustainability debate this book questions the radical nature culture dualism dominating positive modern thinking as well as its underlying view of nature as pre given and independent from human life

**Nature and Culture** Sarah Pilgrim, Jules N. Pretty, 2010 There is a growing recognition that the diversity of life comprises both biological and cultural diversity But this division is not universal and in many cases has been deepened by the common disciplinary divide between the natural and social sciences and our apparent need to manage and control nature This book goes beyond divisive definitions and investigates the bridges linking biological and cultural diversity The international team of authors explore the common drivers of loss and argue that policy responses should target both forms of diversity in a novel integrative approach to conservation thus reducing the gap between science policy and practice While conserving nature alongside human cultures presents unique challenges this book

forcefully shows that any hope for saving biological diversity is predicated on a concomitant effort to appreciate and protect cultural diversity
