## **Nature Experiment And The Sciences:**

**Nature, Experiment, and the Sciences** Trevor H. Levere, W.R. Shea, 2012-12-06 This collection of essays is a tribute to Stillman Drake by some of his friends and colleagues and by others on whom his work has had a formative influence. It is difficult to know him without succumbing to his combination of discipline and enthusiasm even in fields remote from Renaissance physics and natural philosophy and so he should not be surprised in this volume to see emphases and methods congenial to him even on topics as remote as Darwin or the chemical revolution. Therein lies whatever unity the discerning reader may find in this book beyond the natural focus and coherence of the largest section on Galileo and the final section on Drake's collection of books, a major and now accessible resource for research in the field that he has made his own. We have chosen as the occasion for presenting the volume to Stillman Drake Galileo's birthday. Galileo has had more than one birthday party in Toronto since Drake came to the University of Toronto. As for the title, it reflects a shared conviction that experiment is the key to science; it is what scientists do. Drake has already asserted that emphasis in the title of his magisterial *Galileo at Work* and we echo it here. Those who have had the privilege and pleasure of working and arguing with Stillman over the years know his tenacity, penetration and vigour. They also know his generosity and humility. We owe him much.

**The Uses of Experiment** David Gooding, Trevor Pinch, Simon Schaffer, 1989-05-18 Experiment is widely regarded as the most distinctive feature of natural science and essential to the way scientists find out about the world. Yet there has been little study of the way scientists actually make and use experiments. *The Uses of Experiment* fills this gap in our knowledge about how science is practised. Presenting 14 original case studies of important and often famous experiments, the book asks the questions: What tools do experimenters use? How do scientists argue from experiments? What happens when an experiment is challenged? How do scientists check that their experiments are working? Are there differences between experiments in the physical sciences and technology? Leading scholars in the fields of history, sociology and philosophy of science consider topics such as the interaction of experiment, instruments and theory; accuracy and reliability as hallmarks of experiment in science and technology; realising new phenomena; the believability of experiments and the sort of knowledge they produce; and the wider contexts on which experimentalists draw to develop and win support for their work. Drawing on examples as diverse as Galilean mechanics, Victorian experiments on electricity, experiments on cloud formation and testing of nuclear missiles, a new view of experiment emerges. This view emphasises that experiments always involve choice, tactics and strategy in persuading audiences that Nature resembles the picture experimenters create.

*Natural Experiments in the Social Sciences* Thad Dunning, 2012-09-06 The first comprehensive guide to natural experiments, providing an ideal introduction for scholars and students.

*Observation and Experiment in the Natural and Social Sciences* Maria Carla Galavotti, 2006-04-18 According to a long tradition in philosophy of science, a clear cut distinction can be traced between a context of discovery and a context of justification. This tradition dates back to the birth of the discipline in connection with the Circles of Vienna and Berlin in the

twenties and thirties of last century. Convinced that only the context of justification is pertinent to philosophy of science, logical empiricists identified its goal with the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods. Stressing justification as the proper field of application of philosophy of science, logical empiricists intended to leave discovery out of its remit. The context of discovery was then discarded from philosophy of science and left to sociology, psychology and history. The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components. Further, the final abstract formulation of theories should be analysed apart from the process behind it, resulting from a tangle of context-dependent factors. This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation.

**Advances in Experimental Political Science** James N. Druckman, Donald P. Green, 2021-04. Novel collection of essays addressing contemporary trends in political science covering a broad array of methodological and substantive topics.

**Nature's Experiments and the Search for Symbolist Form** Allison Morehead, 2017-02-27. This provocative study argues that some of the most inventive artwork of the 1890s was strongly influenced by the methods of experimental science and ultimately foreshadowed twentieth-century modernist practices. Looking at avant-garde figures such as Maurice Denis, douard Vuillard, August Strindberg, and Edvard Munch, Allison Morehead considers the conjunction of art-making and experimentalism to illuminate how artists echoed the spirit of an increasingly explorative scientific culture in their work and processes. She shows how the concept of nature's experiments—the belief that the study of pathologies led to an understanding of scientific truths—above all about the human mind and body extended from the scientific realm into the world of art, underpinning artists' solutions to the problem of symbolist form and providing a ready-made methodology for fin de siècle truth-seekers. By using experimental methods to transform symbolist theories into visual form, these artists broke from naturalist modes and interrogated concepts such as deformation, automatism, the arabesque, and madness to create modern works that were radically and usefully strange. Focusing on the scientific, psychological, and experimental tactics of symbolism, *Nature's Experiments and the Search for Symbolist Form* demystifies the avant-garde value of experimentation and reveals new and important insights into a foundational period for the development of European modernism.

**The Value and Valuation of Natural Science Collections** John R. Nudds, Charles William Pettitt, 1997. *Experiment and Natural Philosophy in Seventeenth-Century Tuscany* Luciano Boschiero, 2007-09-04. The aim of this book is to explore and understand the activities undertaken by the Florentine Accademia del Cimento, one of Europe's first scientific societies. The Cimento operated for ten years between 1657 and 1667 and during that time performed many experiments and observations in physics and astronomy, rivalling the achievements of the Royal Society of London and the Parisian Académie Royale des

Sciences This book will attempt to sift through the available primary evidence as well as secondary accounts of the Cimento's activities in order to examine the intellectual concerns that the individual academicians acquired throughout their careers and that they pursued while carrying out and interpreting their experiments for the Cimento and the Tuscan Court Those interests will also shed some light on the ways in which the academicians performed and used experiments Inspired by Galileo's success with experiments and instruments during the first half of the seventeenth century the Cimento academicians developed an experimentalist approach to their natural inquiry that attempted to eliminate any dependence on theoretical presuppositions and preconceptions The group's purported aim was to rely solely on the senses to accumulate knowledge of nature This experimental philosophy framed the way in which historians have since viewed the Cimento's practices

**Natural Experiments of History** Jared Diamond, James A. Robinson, 2010 Some central questions in the natural and social sciences can't be answered by controlled laboratory experiments often considered to be the hallmark of the scientific method This impossibility holds for any science concerned with the past In addition many manipulative experiments while possible would be considered immoral or illegal One has to devise other methods of observing describing and explaining the world In the historical disciplines a fruitful approach has been to use natural experiments or the comparative method This book consists of eight comparative studies drawn from history archeology economics economic history geography and political science The studies cover a spectrum of approaches ranging from a non quantitative narrative style in the early chapters to quantitative statistical analyses in the later chapters The studies range from a simple two way comparison of Haiti and the Dominican Republic which share the island of Hispaniola to comparisons of 81 Pacific islands and 233 areas of India The societies discussed are contemporary ones literate societies of recent centuries and non literate past societies Geographically they include the United States Mexico Brazil western Europe tropical Africa India Siberia Australia New Zealand and other Pacific islands In an Afterword the editors discuss how to cope with methodological problems common to these and other natural experiments of history

**Reflections On Experimental Science** Martin Lewis Perl, 1995-12-23 This is a collection of important lecture and original articles and commentaries by Martin Perl discoverer of the tau lepton and the third generation of elementary particles and this year's Nobel Prize winner This book contains a fascinating and realistic picture of experimental science based on the high energy physics research work carried out by him Using reprints of his articles with his commentaries the author presents the various aspects of experimental research in science the pleasures and risks of experimental work the pain and frustration with experiments that are useless or fail the dreaming about experiments that were not carried out the constant search for innovation and creativity in the work and the special joy of discovery The articles and commentaries range from the early days of bubble chambers and spark chambers in the 1950s to the author's present research experiments at an electron positron collider and a search for free quarks The book is for the general reader as well as the scientist

*The SAGE Handbook of the Philosophy of Social*

*Sciences* Ian C Jarvie, Jesus Zamora-Bonilla, 2011-02-17 what is the relationship between the social sciences and the natural sciences where do today s dominant approaches to doing social science come from what are the main fissures and debates in contemporary social scientific thought how are we to make sense of seemingly contrasting approaches to how social scientists find out about the world and justify their claims to have knowledge of it In this exciting handbook Ian Jarvie and Jesus Zamora Bonilla have put together a wide ranging and authoritative overview of the main philosophical currents and traditions at work in the social sciences today Starting with the history of social scientific thought this handbook sets out to explore that core fundamentals of social science practice from issues of ontology and epistemology to issues of practical method Along the way it investigates such notions as paradigm empiricism postmodernism naturalism language agency power culture and causality Bringing together in one volume leading authorities in the field from around the world this book will be a must have for any serious scholar or student of the social sciences

**Research Methodology and Scientific Writing** C. George Thomas, 2021-02-24 This book presents a guide for research methodology and scientific writing covering various elements such as finding research problems writing research proposals obtaining funds for research selecting research designs searching the literature and review collection of data and analysis preparation of thesis writing research papers for journals citation and listing of references preparation of visual materials oral and poster presentation in conferences and ethical issues in research Besides introducing library and its various features in a lucid style the latest on the use of information technology in retrieving and managing information through various means are also discussed in this book The book is useful for students young researchers and professionals

**The art of experimental natural history** Dana Jalobeanu, 2015 Francis Bacon introduced his contemporaries to a new way of investigating nature He called it natural and experimental history Despite its rather traditional name Bacon s natural and experimental history was a new discipline it comprised new ideas new practices and new models of collaborative research This new discipline was in many ways a surprisingly successful project It provided early modern naturalists with tools methods and models for both investigating nature and writing about their subject It also offered a set of norms and values for guiding research And yet this new discipline was not a science of nature it was more like an art This book aims to trace the emergence evolution and reception of Francis Bacon s art of experimental natural history

Hume's Scepticism and the Science of Human Nature Paul Stanistreet, 2017-07-05 This book explores the relationship between Hume s sceptical philosophy and his Newtonian ambition of founding a science of human nature Assessing both received and new readings of Hume s philosophy Stanistreet offers a line of interpretation which he argues makes sense of many of the apparent conflicts and paradoxes in Hume s work and describes how well known controversies concerning Hume s thinking about causation induction and the external world can be resolved Offering important new contributions to Hume scholarship this book also surveys and assesses the new research responsible for the recent sea change in thinking about Hume It offers an accessible overview of these developments while

suggesting significant revisions to current readings of Hume's philosophy      Experimental Inquiries H.E. Le Grand, 1990-06-30 The institutionalization of History and Philosophy of Science as a distinct field of scholarly endeavour began comparatively early though not always under that name in the Australasian region An initial lecturing appointment was made at the University of Melbourne immediately after the Second World War in 1946 and other appointments followed as the subject underwent an expansion during the 1950s and 1960s similar to that which took place in other parts of the world Today there are major Departments at the University of Melbourne the University of New South Wales and the University of Wollongong and smaller groups active in many other parts of Australia and in New Zealand Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for Australian and New Zealand scholars working in the general area of history philosophy and social studies of science Each volume comprises a group of essays on a connected theme edited by an Australian or a New Zealander with special expertise in that particular area Papers address general issues however rather than local ones parochial topics are avoided Further more though in each volume a majority of the contributors is from Australia or New Zealand contributions from elsewhere are by no means ruled out Quite the reverse in fact they are actively encouraged wherever appropriate to the balance of the volume in question
