The Color of Modernism Deborah Ascher Barnstone, 2021-12-30 One of the most enduring and pervasive myths about modernist architecture is that it was white pure white walls both inside and out Yet nothing could be further from the truth The Color of Modernism explodes this myth of whiteness by offering a riot of color in modern architectural treatises polemics and buildings Focusing on Germany in the early 20th century one of modernism's most foundational and influential periods it examines the different scientific and artistic color theories which were advanced by members of the German avant garde from Bruno Taut to Walter Gropius to Hans Scharoun German color theory went on to have a profound influence on the modern movement and Germany serves as the key case study for an international phenomenon which encompassed modern architects worldwide from Le Corbusier and Alvar Aalto to Berthold Lubetkin and Lina Bo Bardi Supported by accessible introductions to the development of color theory in philosophy science and the arts the book uses the German case to explore the new ways in which color was used in architecture and urban design turning attention to an important yet overlooked aspect of the period Much more than a mere correction to the historical record the book leads the reader on an adventure into the color filled worlds of psychology the paranormal theories of sensory perception and pleasure showing how each in turn influenced the modern movement The Color of Modernism will fundamentally change the way the early modernist period is seen and discussed *Books in Print*, 1991

Architecture as Peacework Rudolf Steiner,2016-01-12 At the outbreak of World War I in August 1914 the construction of the singular architectural masterwork that would later be called the Goetheanum and later still the First Goetheanum was already well under way on a hill just above the village of Dornach in neutral Switzerland There a small international community had gathered over the previous year to take part in this utterly unique artistic building project under Rudolf Steiner s direction When the war began the mood and day to day life of Europe was instantly changed no less so amid this ad hoc spiritual and artistic community artillery could be heard in the distance many were called back to their respective countries for armed service and tensions between individuals of various nationalities who remained in Dornach were very soon in evidence This is the immediate background to these evening lectures given in the woodworking building next to the construction site in Dornach just two months after the start of the war Never announcing his intentions and using the metamorphosing forms of the hand sculpted wooden architraves resting on the columns inside the building itself as illustration Steiner embarked on a convincing and heartfelt appreciation even celebration of the uniquely beautiful qualities of the various European cultures then at war These lectures were given at a very specific time and place to a very specific audience with a very clear intention to cultivate in the midst of violence and aggression not just tolerance for other peoples and cultures but also love and sincere appreciation Such intentions are still needed today thus the continued relevance of these lectures The Russian writer Andrei Bely was present at these talks and later commented on them In light of his words we looked at each other with new eyes the oppressive mood was transformed other infections broke out later but the national fever was overcome once and for all The members of the belligerent nations lived in peace from then on *The Goetheanum* Hagen Biesantz,Arne Klingborg,Åke Fant,1979 **Architecture,**

Sculpture, and Painting of the First Goetheanum RUDOLF STEINER,2017 The planning construction and execution of the functional work of art that was the First Goetheanum was an endeavor that occupied Rudolf Steiner for the better part of seven years Every detail from the seemingly small such as the shape and feel of the door handles to the grand motifs of the paintings on the ceilings of the cupolas and the building s intended sculptural centerpiece was lovingly designed to meet and inspire the individual human beings who would some day encounter it not with didactic symbolism but with the transparent reality of the spiritual foundation of humanity and the world and the open possibility to both know this spiritual foundation and to work with it practically and artistically for the good of all The lectures contained in this volume which Steiner accompanied with just over 100 slides here reproduced were given to various audiences when the building was very near to completion before it was destroyed by fire Complemented by a Foreword by the esteemed architect Douglas Cardinal as well as an important and revelatory Introductory essay by David Adams The Form Function Relationship in Architecture and Nature Organic and Inorganic Functionalism this volume of The Collected Works of Rudolf Steiner is essential reading for

anyone who wants to gain a deeper understanding of the artistic motivation of Rudolf Steiner as an artist and architect while also clearing up many of the misunderstandings that the building and its sculptural and painted components have inevitably given rise to both then and now Book jacket

The Light Course Rudolf Steiner, 2001-11 11 lectures Stuttgart and Dornach Dec 23 1919 Aug 8 1921 CW 320 Rudolf Steiner's course on light which includes explorations of color sound mass electricity and magnetism presages the dawn of a new worldview in the natural sciences that will stand our notion of the physical world on its head This first course in natural science given to the teachers of the new Stuttgart Waldorf school as an inspiration for developing the physics curriculum is based on Goethe's phenomenological approach to the study of nature Acknowledging that modern physicists had come to regard Goethe's ideas on physics as a kind of nonsense Steiner contrasts the traditional scientific approach which treats phenomena as evidence of natural laws with Goethean science which rejects the idea of an abstract law behind natural phenomena and instead seeks to be a rational description of nature Steiner then corrects the mechanistic reductionism practiced by scientific positivists emphasizing instead the validity of human experience and pointing toward a revolution in scientific paradigms that would reclaim ground for the subject the human being in the study of nature READ BOBBY MATHERNE'S REVIEW OF THIS BOOK German source Geisteswissenschaftliche impulse zur Entwicklung der Physik Erster Naturwissenschaftlicher Kurs Licht Farbe Ton Masse Elektrizität Magnetismus GA 320 Toward a New Theory of

Architecture Rudolf Steiner, 2017-02 Rudolf Steiner gave thousands of lectures in his lifetime usually without notes and with very few exceptions with nothing more than chalk and a blackboard if he chose to accompany his speech with some kind of visual illustration A notable exception is the presentation that constitutes the main part of this book Given in June 1921 in Bern just eighteen months before its tragic destruction by fire this lecture and slide show consisting of a hundred slides is both the closest thing we have to a guided tour of the original Goetheanum by its architect and a profound statement of artistic purpose In addition to the lecture and slide show that comprise the main content of this volume the introduction by John Kettle serves to place Steiner's artistic contribution to architecture in the context of early twentieth century Expressionism and Organicism Frederick Amrine's thorough bibliographic essay highlights the most important secondary literature on Steiner's architecture and provides a sound entry to further exploration and study **Youth's Search in**
