**The Nature of Concepts** Philip Van Looke,2012-10-12 The Nature of Concepts examines a central issue for all the main disciplines in cognitive science how the human mind creates and passes on to other human minds a concept An excellent cross disciplinary collection with contributors including Steven Pinker Andy Clarke and Henry Plotkin *The Nature of Concepts* Philip Van Looke,2012-10-12 The Nature of Concepts examines a central issue for all the main disciplines in cognitive science how the human mind creates and passes on to other human minds a concept An excellent cross disciplinary collection with contributors including Steven Pinker Andy Clarke and Henry Plotkin *The Architecture of Concepts* Peter de Bolla,2013-12-02 The Architecture of Concepts proposes a radically new way of understanding the history of ideas Taking as its example human rights it develops a distinctive kind of conceptual analysis that enables us to see with precision how the concept of human rights was formed in the eighteenth century The first chapter outlines an innovative account of concepts as cultural entities The second develops an original methodology for recovering the historical formation of the concept of human rights based on data extracted from digital archives This enables us to track the construction of conceptual architectures over time Having established the architecture of the concept of human rights the book then examines two key moments in its historical formation the First Continental Congress in 1775 and the publication of Tom Paine s Rights of Man in 1792 Arguing that we have yet to fully understand or appreciate the consequences of the eighteenth century invention of the concept rights of man the final chapter addresses our problematic contemporary attempts to leverage human rights as the most efficacious way of achieving universal equality *Travelling Concepts for the Study of Culture* Birgit Neumann,Ansgar Nünning,2012-10-01 Bringing together innovative and internationally renowned experts this volume provides concise presentations of the main concepts and cutting edge research fields in the study of culture rather than the infinite multitude of possible themes More specifically the volume outlines different models for the study of culture explores avenues for interdisciplinary exchange assesses key concepts and traces their travels across various disciplinary historical and national contexts To trace the travelling of concepts means to map both their transfer from one discipline approach or culture of research to another and also to identify the transformations which emerge through these processes of transfer The volume serves to show that working with travelling concepts provides a unique strategy for research and research design which can open up a wide range of promising perspectives for interdisciplinary exchange It offers an exemplary overview of an interdisciplinary and international approach to the travelling concepts that organize structure and shape the study of culture In doing so the volume serves to initiate a dialogue that exceeds disciplinary and national boundaries and introduces a self reflexive dimension to the field thus affording a recognition of how deeply disciplinary premises and nation specific research traditions affect different approaches in the study of culture Shared Representations Sukhvinder S. **Mirror Neuron Systems** Jaime A. Pineda,2009-03-01 The aim of this book is to bring together social scientists cognitive scientists psychologists neuroscientists neuropsychologists and others to promote a dialogue about the variety of processes involved in social cognition as well as the relevance of mirroring neural systems to those processes Social cognition is a broad discipline that encompasses many issues not yet adequately addressed by neurobiologists Yet it is a strong belief that framing these issues in terms of the neural basis of social cognition especially within an evolutionary perspective can be a very fruitful strategy This book includes some of the leading thinkers in the nascent field of mirroring processes and reflects the authors attempts to till common ground from a variety of perspectives The book raises contrary views and addresses some of the most vexing yet core questions in the field providing the basis for extended discussion among interested readers and laying down guidelines for future research It has been argued that interaction with members of one's own social group

enhances cognitive development in primates and especially humans Barrett Henzi 2005 Byrne and Whiten 1988 Donald 1991 and others have speculated that abilities such as cooperation deception and imitation led to increasingly complex social interactions among primates resulting in a tremendous expansion of the cerebral cortex The evolutionary significance of an imitation capability in primates is matched by its ontological consequences

Conceptual Structures: From Information to Intelligence Madalina Croitoru, Sébastien Ferré, Dickson Lukose, 2010-07-30 th The 18 International Conference on Conceptual Structures ICCS 2010 was the latest in a series of annual conferences that have been held in Europe A tralia and North America since 1993 The focus of the conference has been the representation and analysis of conceptual knowledge for research and practical application ICCS brings together researchers and practitioners in information and computer sciences as well as social science to explore novel ways that c ceptual structures can be deployed Arising from the research on knowledge representation and reasoning with conceptual graphs over the years ICCS has broadened its scope to include in vations from a wider range of theories and related practices among them other forms of graph based reasoning systems like RDF or existential graphs formal concept analysis Semantic Web technologies ontologies concept mapping and more Accordingly ICCS represents a family of approaches related to conc tualstructuresthatbuild onthesuccesseswithtechniquesderivedfromarti cial intelligence knowledge representation and reasoning applied mathematics and lattice theory computational linguistics conceptual modeling and design d grammatic reasoning and logic intelligent systems and knowledge management The ICCS 2010 theme From Information to Intelligence hints at unve ing the reasoning capabilities of conceptual structures Indeed improvements in storage capacity and performance of computing infrastructure have also fected the nature of knowledge representation and reasoning KRR systems shifting their focus toward representational power and execution performance Therefore KRR research is now faced with a challenge of developing knowledge representation and reasoning structures optimized for such reasonings

*Evolutionary Processes in the Natural History of Religion* Hansjörg Hemminger, 2021-09-22 The study of religion by the humanities and social sciences has become receptive for an evolutionary perspective Some proposals model the evolution of religion in Darwinian terms or construct a synergy between biological and non Darwinian processes The results however have not yet become truly interdisciplinary The biological theory of evolution in form of the Extended Evolutionary Synthesis EES is only sparsely represented in theories published so far by scholars of religion Therefore this book reverses the line of view and asks how their results assort with evolutionary biology How can the subject area religion integrated into behavioral biology How is theory building affected by the asymmetry between the scarce empirical knowledge of prehistoric religion and the body of knowledge about extant and historic religions How does hominin evolution in general relate to the evolution of religion Are there evolutionary pre adaptations Subsequent versions of evolutionary biology from the original Darwinism to EES are used in interdisciplinary constructs Can they be integrated into a comprehensive theory The biological concept most often used is co evolution in form

of a gene culture co evolution However the term denotes a process different from biological co evolution Important EES concepts do not appear in present models of religious evolution e g neutral evolution evolutionary drift evolutionary constraints etc How to include them into an interdisciplinary approach Does the cognitive science of religion CSR harmonize with behavioral biology and the brain sciences Religion as part of human culture is supported by a complex multi level behavioral system How can it be modeled scientifically The book addresses graduate students and researchers concerned about the scientific study of religion and biologist interested in interdisciplinary theory building in the field

**Evolution and Development** Alan C. Love, 2024-03-07 The intersection of development and evolution has always harbored conceptual issues but many of these are on display in contemporary evolutionary developmental biology evo devo These issues include 1 the precise constitution of evo devo with its focus on both the evolution of development and the developmental basis of evolution and how it fits within evolutionary theory 2 the nature of evo devo model systems that comprise the material of comparative and experimental research 3 the puzzle of how to understand the widely used notion of conserved mechanisms 4 the definition of evolutionary novelties and expectations for how to explain them and 5 the demand of interdisciplinary collaboration that derives from investigating complex phenomena at key moments in the history of life such as the fin limb transition This Element treats these conceptual issues with close attention to both empirical detail and scientific practice to offer new perspectives on evolution and development This title is also available as Open Access on Cambridge Core

*Knowledge Representation and Relation Nets* Aletta E. Geldenhuys, Hendrik O. van Rooyen, Franz Stetter, 2012-12-06 Knowledge Representation and Relation Nets introduces a fresh approach to knowledge representation that can be used to organize study material in a convenient teachable and learnable form The method extends and formalizes concept mapping by developing knowledge representation as a structure of concepts and the relationships among them Such a formal description of analogy results in a controlled method of modeling new knowledge in terms of existing knowledge in teaching and learning situations and its applications result in a consistent and well organized approach to problem solving Additionally strategies for the presentation of study material to learners arise naturally in this representation While the theory of relation nets is dealt with in detail in part of this book the reader need not master the formal mathematics in order to apply the theory to this method of knowledge representation To assist the reader each chapter starts with a brief summary and the main ideas are illustrated by examples The reader is also given an intuitive view of the formal notions used in the applications by means of diagrams informal descriptions and simple sets of construction rules Knowledge Representation and Relation Nets is an excellent source for teachers courseware designers and researchers in knowledge representation cognitive science theories of learning the

psychology of education and structural modeling      Nature and History Ignazio Masulli, 2019-06-07 Originally published in 1990 *Nature and History* examines how Darwin's theory of evolution has been expanded by scholars and researchers to include virtually every scientific discipline The book presents a morphological analysis of historical and social sciences sciences which have traditionally have been viewed as too random in their progressions to conform to a model Through the evaluation of empirical and factual evidence the book builds a case for an evolutionary paradigm which encompasses both natural and social sciences and presents the form's adaptiveness in working historical models      *Evolutionary Algorithms for Embedded System Design* Rolf Drechsler, Nicole Drechsler, 2012-12-06 *Evolutionary Algorithms for Embedded System Design* describes how Evolutionary Algorithm EA concepts can be applied to circuit and system design an area where time to market demands are critical EAs create an interesting alternative to other approaches since they can be scaled with the problem size and can be easily run on parallel computer systems This book presents several successful EA techniques and shows how they can be applied at different levels of the design process Starting on a high level abstraction where software components are dominant several optimization steps are demonstrated including DSP code optimization and test generation Throughout the book EAs are tested on real world applications and on large problem instances For each application the main criteria for the successful application in the corresponding domain are discussed In addition contributions from leading international researchers provide the reader with a variety of perspectives including a special focus on the combination of EAs with problem specific heuristics *Evolutionary Algorithms for Embedded System Design* is an excellent reference for both practitioners working in the area of circuit and system design and for researchers in the field of evolutionary concepts

**The Imperative** Alphonso Lingis, 1998 a more compelling reading of Kant than any I have ever seen David Farrell Krell In this provocative book Alphonso Lingis argues that not only our thought is governed by an imperative as Kant had maintained but rather our sensual sensing perceiving and emotional life is continually regulated by imperatives that come to us from the world around us Through a series of phenomenological sketches drawn from life experiences Lingis shows that there are directives in the natural world and in our interactions with others that govern our thought and behavior
