The Nature of Horses Stephen Budiansky,1997 Horses have a shared history with man going back millennia to their domestication around 4000 B C Yet only in very recent years have scientists begun to turn the tools of modern science on this remarkable animal that has been so wrapped up in human dreams and legends Now modern scientific research is beginning to explain long standing mysteries about the true nature of the horse How well can horses really see What causes breakdowns in racehorses How intelligent are they compared to other animals and are some breeds smarter than others. Does nature or nurture matter more in creating a great sport horse What causes cribbing and other vices In this beautifully illustrated compelling narrative Budiansky tells the story of the origins behavior intelligence and language of the horse

Hess, 2022-10-05 The American Civil War saw the creation of the largest most potent artillery force ever deployed in a conflict fought in the Western Hemisphere It was as sizable and powerful as any raised in prior European wars Moreover Union and Confederate artillery included the largest number of rifled pieces fielded in any conflagration in the world up to that point Earl J Hess's Civil War Field Artillery is the first comprehensive general history of the artillery arm that supported infantry and cavalry in the conflict Based on deep and expansive research it serves as an exhaustive examination with abundant new interpretations that reenvision the Civil War s military Hess explores the major factors that affected artillerists and their work including the hardware the organization of artillery power relationships between artillery officers and other commanders and the influence of environmental factors on battlefield effectiveness He also examines the lives of artillerymen the use of artillery horses manpower replacement practices effects of the widespread construction of field fortifications on artillery performance and the problems of resupplying batteries in the field In one of his numerous reevalutions Hess suggests that the early war practice of dispersing guns and assigning them to infantry brigades or divisions did not inhibit the massing of artillery power on the battlefield and that the concentration system employed during the latter half of the conflict failed to produce a greater concentration of guns In another break with previous scholarship he shows that the efficacy of fuzes to explode long range ordnance proved a problem that neither side was able to resolve during the war Indeed cumulative data on the types of projectiles fired in battle show that commanders lessened their use of the new long range exploding ordnance due to bad fuzes and instead increased their use of solid shot the oldest artillery projectile in history **Ableist Rhetoric** James L. Cherney, 2019-11-01 Ableism a

form of discrimination that elevates able bodies over those perceived as less capable remains one of the most widespread areas of systematic and explicit discrimination in Western culture Yet in contrast to the substantial body of scholarly work on racism sexism classism and heterosexism ableism remains undertheorized and underexposed In this book James L Cherney takes a rhetorical approach to the study of ableism to reveal how it has worked its way into our everyday understanding of disability Ableist Rhetoric argues that ableism is learned and transmitted through the ways we speak about those with disabilities Through a series of textual case studies Cherney identifies three rhetorical norms that help illustrate the widespread influence of ableist ideas in society He explores the notion that deviance is evil by analyzing the possession narratives of Cotton Mather and the modern horror touchstone The Exorcist He then considers whether normal is natural in Aristotle's Generation of Animals and in the cultural debate over cochlear implants Finally he shows how the norm body is able operates in Alexander Graham Bell's writings on eugenics and in the legal cases brought by disabled athletes Casey Martin and Oscar Pistorius These three simple equivalencies play complex roles within the social institutions of religion medicine law and sport Cherney concludes by calling for a rhetorical model of disability which he argues will provide a shift in orientation to challenge ableism s epistemic ideological and visual components Accessible and compelling this groundbreaking book will appeal to scholars of rhetoric and of disability studies as well as to disability rights advocates
