Nature and Environment: The Psychology of Its Benefits and Its Protection Marc Glenn Berman, 2017-04-20 Our Research Topic section entitled Nature and the environment The psychology of its benefits and its protection will have two main lines The first line of articles will center upon cutting edge research showing how interacting with nature can affect health well being and overall improve cognition and affect Articles in this line will stress in what ways nature can improve psychological functioning and health and also discuss the theories and evidence as to why nature can improve psychological functioning For this line we welcome submission of articles that discuss the psychological health and well being benefits from interacting with nature as well as submissions that focus on theoretical considerations and underlying mechanisms that lead to the restorative effects of interacting with nature Given that nature can have a positive impact on psychological functioning and overall health it is also important to understand the variables that facilitate people's recognition of environmental issues that can help foster a more positive attitude towards the preservation of nature This brings us to the second line of articles which will center upon the psychological mechanisms that make individuals more or less likely to accept the seriousness of environmental challenges such as climate change Given the new cutting edge research in this field we may be able to make individuals more proactive in the protection of the environment and more accepting of policy measures required to mitigate climate change We see this research topic as a way for psychological scientists to contribute substantially to an important area of public debate and policy For this line we welcome articles that will focus on ways in which people respond to various framings of policy relevant information and how morality may play into the individuals policy views that center on climate change and environmental protection

**The Science of Human Nature** William Henry Pyle, 2017-10-12 Chapter I Introduction 7 Chapter II Development of the Race and of the Individual 19 Chapter III Mind and Body 31 Chapter IV Inherited Tendencies 44 Chapter V Feeling and Attention 62 Chapter VI Habit 73 Chapter VII Memory 99 Chapter VIII Thinking 120 Chapter IX Individual Differences 138 Chapter X Applied Psychology 159 ALPHABETICAL LIST OF REFERENCES 168 Glossary 169 AUTHOR'S PREFACE This book is written for young students in high schools and normal schools No knowledge can be of more use to a young person than a knowledge of himself no study can be more valuable to him than a study of himself A study of the laws of human behavior that is the purpose of this book What is human nature like Why do we act as we do How can we make ourselves different How can we make others different How can we make ourselves more efficient How can we make our lives more worth while This book is a manual intended to help young people to obtain such knowledge of human nature as will enable them to answer these questions I have not attempted to write a complete text on psychology There are already many such books and good ones too I have selected for treatment only such topics as young students can study with interest and profit I have tried to keep in mind all the time the practical worth of the matters discussed and the ability and experience of the intended readers TO THE TEACHER This book can be only a guide to

you You are to help your students study human nature You must to some extent be a psychologist yourself before you can teach psychology You must yourself be a close and scientific student of human nature Develop in the students the spirit of inquiry and investigation Teach them to look to their own minds and their neighbor s actions for verification of the statements of the text Let the students solve by observation and experiment the questions and problems raised in the text and the exercises The exercises should prove to be the most valuable part of the book The first two chapters are the most difficult but ought to be read before the rest of the book is studied If you think best merely read these two chapters with the pupils and after the book is finished come back to them for careful study In the references I have given parallel readings for the most part to Titchener Pillsbury and M nsterberg I have purposely limited the references partly because a library will not be available to many who may use the book and partly because the young student is likely to be confused by much reading from different sources before he has worked out some sort of system and a point of view of his own Only the most capable members of a high school class will be able to profit much from the references given TO THE STUDENT You are beginning the study of human nature You can not study human nature from a book you must study yourself and your neighbors This book may help you to know what to look for and to understand what you find but it can do little more than this It is true this text gives you many facts learned by psychologists but you must verify the statements or at least see their significance to you or they will be of no worth to you However the facts considered here properly understood and assimilated ought to prove of great value to you But perhaps of greater value will be the psychological frame of mind or attitude which you should acquire The psychological attitude is that of seeking to find and understand the causes of human action and the causes consequences and significance of the processes of the human mind If your first course in psychology teaches you to look for these things gives you some skill in finding them and in using the knowledge after you have it your study should be quite worth while W H PYLE *The Nature of Psychology* Kenneth J.
