Dictionary Of Modern American Philosophers John R. Shook, 2005-05-15 The Dictionary of Modern American Philosophers includes both academic and non academic philosophers and a large number of female and minority thinkers whose work has been neglected It includes those intellectuals involved in the development of psychology pedagogy sociology anthropology education theology political science and several other fields before these disciplines came to be considered distinct from philosophy in the late nineteenth century Each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and suggestions for further reading While all the major post Civil War philosophers are present the most valuable feature of this dictionary is its coverage of a huge range of less well known writers including hundreds of presently obscure thinkers In many cases the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought

[Fifty Key Thinkers in Psychology](#) Noel Sheehy, 2004 Table of contents

Brain and Behaviour Bryan Kolb, Ian Whishaw, 2016-10-18 Revisiting the Classic Studies is a series of texts that introduces readers to the studies in psychology that changed the way we think about core topics in the discipline today It provokes students to ask more interesting and challenging questions about the field by encouraging a deeper level of engagement both with the details of the studies themselves and with the nature of their contribution Edited by leading scholars in their field and written by researchers at the cutting edge of these developments the chapters in each text provide details of the original works and their theoretical and empirical impact and then discuss the ways in which thinking and research has advanced in the years since the studies were conducted Brain and Behaviour Revisiting the Classic Studies traces 17 ground breaking studies by researchers such as Gage Luria Sperry and Tulving to re examine and reflect on their findings and engage in a lively discussion of the subsequent work that they have inspired Suitable for students on neuropsychology courses at all levels as well as anyone with an enquiring mind

[A Psychology for People of God](#) E. Rae Harcum, 2012-04-19 This book combats the anti religious sentiment of some psychologists It argues that Christians do not

have to give up their religious faith to keep the contributions of science A science compatible with religion accepts that human beings have freedom of will to select behaviors and that all methods of studying human behavior are acceptable Both of these premises are accepted by a modern view of science which recognizes its inherent subjectivity E Rae Harcum explicitly asserts the important role of spirituality in psychology especially in psychotherapy The book confronts the relation between the human body and its non material parts the mind and spirit and provides a way of looking at these metaphysical issues A Psychology for People of God promotes the need of the Christian to love and to care for his or her fellows After all fitness for survival entails the willingness to serve

Limits in Perception Andrea J. van Doorn, Wim A. van de Grind, Jan J. Koenderink, 1984-12 This book presents an analysis of limits in perception from the vantage point of the physicist the engineer the psychophysicist the psychologist and the theorist Limits in perception find their causal explanation at many logically and or physically different levels Some of the most fundamental bottlenecks are due to the quantum mechanical and atomistic structure of the microworld Other simple constraints are due to the material constitution of sensory organs For instance the fact that the eye is predominantly composed of water limits both the optical quality and the available spectral window The engineer uses knowledge on such limits to design equipment that optimizes human performance in daily life Examples include room acoustics and visual displays Psychophysicists and psychologists deal with limits on a quite different logical level These limits constrain much of our perceptually guided behaviour The book includes chapters on such topics as movement perception binocular vision illusory phenomena language and perception the perception of time A few concluding chapters on fundamental limits imposed by information theoretical constraints on the coding and representation of sensed structure are included Limits in Perception will be important reading material for scientists and or engineers in the following fields perception experimental psychology sensory biology physics neuroscience human engineering artificial intelligence robotics ophthalmology audiology psychonomics and ergonomics remote sensing

The MIT Encyclopedia of the Cognitive Sciences (MITECS) Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition The MIT Encyclopedia of the Cognitive Sciences

MITECS is a landmark comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article written by a leading researcher in the field provides an accessible introduction to an important concept in the cognitive sciences as well as references or further readings. Six extended essays which collectively serve as a roadmap to the articles provide overviews of each of six major areas of cognitive science: Philosophy, Psychology, Neurosciences, Computational Intelligence, Linguistics and Language, and Culture, Cognition and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.

The Smartness

Mandate Orit Halpern, Robert Mitchell, 2023-01-10. Over the last half century, smartness—the drive for ubiquitous computing—has become a mandate, a new mode of managing and governing politics, economics, and the environment. Smart phones, Smart cars, Smart homes, Smart cities. The imperative to make our world ever smarter in the face of increasingly complex challenges raises several questions: What is this smartness mandate? How has it emerged, and what does it say about our evolving way of understanding and managing reality? How have we come to see the planet and its denizens, first and foremost, as data-collecting instruments? In *The Smartness Mandate*, Orit Halpern and Robert Mitchell radically suggest that smartness is not primarily a technology but rather an epistemology. Through this lens, they offer a critical exploration of the practices, technologies, and subjects that such an understanding relies upon: artificial intelligence and machine learning. The authors approach these not simply as techniques for solving problems of calculations but rather as modes of managing life, human and other, in terms of neo-Darwinian evolution, distributed intelligences, and resilience, all of which have serious implications for society, politics, and the environment. The smartness mandate constitutes a new form of planetary governance, and Halpern and Mitchell aim to map the logic of this seemingly inexorable and now naturalized demand to compute, to illuminate the genealogy of how we arrived here, and to point to alternative imaginaries of the possibilities and potentials of smart technologies and infrastructures.

The Neuropsychology of Individual Differences Philip A. Vernon, 2013-10-22

This handbook provides a comprehensive and up-to-date summary of neuropsychological approaches to the assessment and study of individual differences. The book covers individual differences in mental abilities such as intelligence, mental retardation, learning, memory, language, and reading. In addition, it discusses neurological models of cognitive information processing, individual differences in personality and temperament, and neuro-psychological approaches to the assessment of learning disabilities and psychopathological disorders.
