In this re evaluation of the basic postulates of geomorphology first published in 1982 Alistair Pitty examines the subject within its scientific context arguing that coherence in geomorphology can be demonstrated despite the many apparent divergences which should themselves be regarded as poles within a spectrum of opinion Not least the particularly geological and geographical aspects of geomorphology are carefully identified and explained within this coherence

Thorn, 1996-01-09 Proceedings of the 27th Binghamton Symposium in Geomorphology held 27-29 September 1996     Quaternary and Recent Processes and Forms (1890-1965) and the Mid-century Revolutions Richard J. Chorley, 2008     **Key Concepts in Geography** Nicholas Clifford, Sarah Holloway, Stephen P. Rice, Gill Valentine, 2008-12-12

This book clearly outlines key concepts that all geographers should readily be able to explain. It does so in a highly accessible way. It is likely to be a text that my students will return to throughout their degree. Dr Karen Parkhill Bangor University. The editors have done a fantastic job. This second edition is really accessible to the student and provides the key literature in the key geographical terms of scale, space, time, place and landscape. Dr Elias Symeonakis Manchester Metropolitan University. An excellent introductory text for accessible overviews of key concepts across human and physical geography. Professor Patrick Devine Wright Exeter University. Including ten new chapters on nature, globalization, development and risk, and a new section on practicing geography, this is a completely revised and updated edition of the best-selling standard student resource. **Key Concepts in Geography** explains the key terms: space, time, place, scale, landscape, that define the language of geography. It is unique in the reference literature as it provides in one volume concepts from both human geography and physical geography. Four introductory chapters on different intellectual traditions in geography situate and introduce the entries on the key concepts. Each entry then comprises a short definition, a summary of the principal arguments, a substantive 5,000 word discussion, the use of real-life examples and annotated notes for further reading. Written in an accessible way by established figures in the discipline, the definitions provide thorough explanations of all the core concepts that undergraduates of geography must understand to complete their degree.     Key Methods in Geography Nicholas Clifford, Shaun French, Gill Valentine, 2010-05-19. Its range is far broader than the majority of methods texts being concerned with both human and physical geography. Given the seriousness with which **Key Methods in Geography** approaches all aspects of research, it will continue to find wide favour among undergraduate geographers. *Times Higher Education Textbook Guide*. All geographers, whatever their interest, need to do research. This book will help them get started in the best possible way, with thoughtful advice on everything from project design through choice of methods to data analysis and presentation. Well written and covers a wide range of methods thoroughly. Sue Rodway Dyer, Exeter University. This is an excellent book and deals with a number of topics which I teach outside of the tutorial module where it is a recommended text for geographers. A very useful textbook throughout a 3-year Geography programme. Ian Harris, Bangor University. **Key Methods in Geography** is an introduction to the principal methodological issues involved in the collection, analysis and presentation of geographical information. It is unique in the reference literature for providing an overview of qualitative and quantitative methods for human and physical geography. An accessible primer, it will be used by students as a

reference throughout their degree on all issues from research design to presentation This second edition has been fully revised and updated and includes new chapters on internet mediated research diaries as a research method making observations and measurements in the field and the analysis of natural systems Organized into four sections Getting Started in Geographical Research Generating and Working with Data in Human Geography Generating and Working with Data in Physical Geography Representing and Interpreting Geographical Data each chapter comprises A short definition A summary of the principal arguments A substantive 5 000 word discussion Use of real life examples Annotated notes for further reading The teaching of research methods is integral to all geography courses Key Methods in Geography 2nd Edition explains all of the key methods with which geography undergraduates must be conversant **Tools in Fluvial Geomorphology** G. geographers It demonstrates the variety of alternative philosophical perspectives and emphasizes the difference that the real world geographical context and the geographer make to the study of environmental phenomenon This includes a consideration of the dynamic relationship between human and physical geography Finally the text demonstrates the relevance of philosophy for both an understanding of published material and for the design and implementation of studies in physical geography This edition has been fully updated with two new chapters on field studies and modelling as well as greater discussion of ethical issues and forms of explanation The book explores key themes such as reconstructing environmental change species interactions and fluvial geomorphology and is complimented throughout with case studies to illustrate concepts
