Nature Of Plants Habitats Challenges And Adaptations:

The Nature of Plants John Dawson, Rob Lucas, 2005 There has always been interest in how animals live their lives it is easy for us to identify with them But there are many remarkable stories about plants that deserve to be told The Nature of Plants tells how plants adapt to the challenges of their habitats Plants may live in places that provide too little rainfall yet they thrive either by evading drought like the animals that live in deserts or by tolerating the scarcity There are plants that use other plants climbing on them strangling some living in their leafy canopies or parasitizing them And The Nature of Plants explores the love hate relationships that plants have with animals some feeding on plants but others drawn into serving plants by pollinating them scattering their fruits and seeds or being eaten themselves The mostly hidden associations that plants have with bacteria and fungi are also revealed Illustrated throughout with superb color photographs it is written in a way that is clear to anyone who wishes to understand the life of plants

Alice in the Land of Plants Yiannis Manetas, 2012-06-07 Why is it that plants do not need to move How does a nonmotile organism have sex or defend itself Why are some plants virtually immortal What is the mechanism that allows plants to exploit a practically inexhaustible extraterrestrial energy source How do plants regulate the composition of our planet's atmosphere Why have there not been mass extinctions among plants as there have been among animals How do plants communicate with one another In the end are plants intelligent organisms These are some of the questions the author discusses to demonstrate that plants are wrongly considered to be simple organisms lacking specific behaviour and intelligence This book promises to be as pleasant a surprise as Alice's experience in the white rabbit's warren in which she encountered a world very different from ours The author explains the biology of plants following Einstein's maxim that everything should be made as simple as possible but not simpler

mechanisms for protecting plants from solar UV ever since their migration to terrestrial habitats Experimental evidence is provided for establishing how plants through their stationary habit in the open field survive and flourish by developing suitable UV acclimation strategies through the repair of damaged macromolecules and or upregulation of screening compounds viz flavonoids Presenting an analysis of related literature it also highlights the importance of outdoor experiments over those in closed chamber under artificial UV light for obtaining realistic data The book presents a comprehensive account of the stratospheric ozone layer its formation and seasonal thinning with particular reference to alarming anthropogenic destruction of the ozone layer since the last quarter of the twentieth century which has resulted in increased UV fluence on Earth It discusses variations in the hazardous impact of UV on life at different latitudes through the ages and examines altitudinal variations in UV effects in case studies demonstrating high antioxidant content and aroma status in Darjeeling tea leaves at high altitudes compared with those of the same tea clones in Assam leaves at low altitudes with both sites being at the same latitude It provides evidence which suggests that the UV effects relating to the expression of seed vigour viability could be epigenetic Further it presents recently developed microscopic technologies for demonstrating the penetration of UV into plant cells and discusses how cellular metabolism can be affected either directly or via signal transduction Effect of damage in DNA the key target of UV radiation has been demonstrated and estimated using precise techniques The latest FOX Hunting technique as a useful means of transcriptome analysis that may be used for developing UV tolerant plants through Marker Assisted Breeding has also been discussed Using biochemical and biotechnological methods the experiments presented highlight the gene X environment based upregulation of specific metabolic pathways allowing i value addition in plant derived food and ii paving the way for the industrial manufacture of Alternative Medicine products The book is enriched by a critical review of the available literature and appropriate case studies selected from the author s own findings which span nearly four decades of active research
