Geological History of Britain and Ireland Nigel H. Woodcock, R. A. Strachan, 2012-05-21 Britain and Ireland have a remarkably varied geology for so small a fragment of continental crust with a fine rock record back through three billion years of geological time. This history would have been interesting enough if it had been played out on relatively stable continental crust. However, Britain and Ireland have developed at a tectonic crossroads on crust once traversed by subduction zones and volcanic arcs, continental rifts and mountain belts. The resulting complexity is instructive, fascinating and perplexing. *Geological History of Britain and Ireland* tells the region's story at a level accessible to undergraduate geologists as well as to postgraduates, professionals or informed amateurs. This second edition is fully revised and updated, reflecting our continually developing knowledge of the region's geology. Full coverage is again given to the rich Precambrian and Early Palaeozoic history as well as to later events more relevant to hydrocarbon exploration. The book is an essential starting point for more detailed studies of the regional geology. Additional resources for this book can be found at <http://www.wiley.com/go/woodcock/geologicalhistory>.

Geology of the Innuitian Orogen and Arctic Platform of Canada and Greenland H.P. Trettin, 1991. Fourteen chapters discuss regional stratigraphy by time intervals from Precambrian to Quaternary, while other chapters describe the geography, geomorphology, tectonics, geophysical characteristics and resources of the region. A summary chapter includes geologic maps, structural cross sections, a geotectonic correlation chart, a gravity map and a location map for exploration wells in the Arctic Islands and northern Greenland. A wealth of additional information is contained on the nine accompanying plates.

Later Proterozoic Stratigraphy of the Northern Atlantic Regions J. A. Winchester, 2012-12-06. Later Proterozoic Stratigraphy of the Northern Atlantic stimulating and their prompt submission of text and illustrative material has enabled rapid production of *Regions*, which aims to produce a concise and up-to-date synthesis of the later Proterozoic geology of those lands. The book's funding for this research has come from many bordering the North Atlantic that were once situated sources including the Natural Environment Research Council, the British Geological Survey, the Geological Proterozoic rocks deposited between 1150 and 650 Ma. Surveys of Greenland and Newfoundland and many of the latter date marked by the Varanger glaciation are universities the main subject of the book, although reference is also made to deposits laid down at the end of the Proterozoic. Methods of approach including structural analysis in Scandinavia, Newfoundland and Greenland. The sedimentology, whole rock trace element geochemistry, need for such a comprehensive review has become geophysics and isotopic age dating. The scope of the increasingly apparent in recent years because the original research was extended to include formerly unexplored areas and as a result a number of useful elements in complex metamorphic terrains has unlocked a correlation between these regions can be

W. Glennie, 2009-06-29 Since the 3rd edition of this publication emphasis within the petroleum industry has shifted from exploration to appraisal and development of existing hydrocarbon resources This change is reflected in this new 4th edition which has been significantly expanded to accomodate additional material The centrepiece of the book however remains a series of descriptions in stratigraphic order of the depositional history and hydrocarbon related rock units of the North Sea Ore Deposits in an Evolving Earth G.R.T. Jenkin, P.A.J. Lusty, I. McDonald, M.P. Smith, A.J. Boyce, J.J. Wilkinson, 2015-01-02 Ore deposits form by a variety of natural processes that concentrate elements into a volume that can be economically mined Their type character and abundance reflect the environment in which they formed and thus they preserve key evidence for the evolution of magmatic and tectonic processes the state of the atmosphere and hydrosphere and the evolution of life over geological time This volume presents 13 papers on topical subjects in ore deposit research viewed in the context of Earth evolution These diverse yet interlinked papers cover topics including controls on the temporal and spatial distribution of ore deposits the sources of fluid gold and other components of orogenic gold deposits the degree of oxygenation in the Neoproterozoic ocean bacterial immobilization of gold in the semi arid near surface environment and mineral resources for the future including issues of resource estimation sustainability of supply and the criticality of certain elements to society Natural Heritage of Japan Abhik Chakraborty, Kuniyasu Mokudai, Malcolm Cooper, Mahito Watanabe, Shamik Chakraborty, 2017-10-27 This volume brings together the geological geomorphological and ecological aspects of Japan s natural heritage arguing for dynamic conservation of such heritage and explaining their key characteristics in an accessible format for general readers Sites from World Heritage Properties Natural UNESCO Global Geoparks and National Parks of Japan representing key facets of this heritage are analyzed in depth and the text is supplemented with color photographs and useful information for potential

travelers The volume is divided into thematic sections that help understand the diversity of Japan's natural heritage with supplementary information on conservation tourism trends local culture and lifestyles In addition chapters analyzing nature's mechanisms that engender diverse heritage landscapes and conservation sustainable management schemes make this volume a valuable resource for both general readers and those with more specialized interests The Timing and Location of Major Ore Deposits in an Evolving Orogen Derek John Blundell, Franz Neubauer, Albrecht Quad, 2002 The Nature of Geomorphological Hazards in the Nepal Himalaya Jan Kalvoda, Eva Novotná, 2024-07-03 The book offers a wide range of research topics that are addressed with the aim of contributing to the knowledge of geomorphological hazards in the Himalaya It is emphasized the integration of climate driven morphogenetic and tectonic processes in the Nepal Himalaya as a substantial phenomenon of active collisional orogeny The extreme dynamics of landform evolution in the Himalayan terranes triggers severe natural hazards and risks Interdisciplinary research of geomorphological processes and events related to natural hazards in the Nepal Himalaya follows general efforts to reduce geoenvironmental disasters Visual documentation is of particular importance in the conception of the book which is intended for specialized researchers as well as students

The Geology of England and Wales P. J. Brenchley, Peter Franklin Rawson, 2006 This second edition of The Geology of England and Wales is considerably expanded from its predecessor reflecting the increase in our knowledge of the region and particularly of the offshore areas Forty specialists have contributed to 18 chapters which cover a time range from 700 million years ago to 200 million years into the future A new format places all the chapters in approximately temporal order Both offshore and economic geology now form an integral part of appropriate chapters *Synthesis of the Caledonian Rocks of Britain* D.J. Fettes, A.L. Harris, 2012-12-06 The Advanced Science Institute on which this publication is based took the somewhat unusual form of a geological field symposium held during late August 1984 It was designed to demonstrate to experienced earth scientists from the North Atlantic area the full range of geological phenomena encountered in the British Caledonian rocks The ASI travelled from South Wales to the far northwest of Scotland by the route shown on the map and in doing so examined sedimentary igneous and metamorphic rocks from Pembrokeshire Dyfed Cardigan Ceredigion Snowdonia Anglesey the English Lake District and the Southern Uplands and Highlands of Scotland Thus the fifty or so participants in the ASI studied the geological history and major structures of rocks exposed on either side of the supposed Lower Palaeozoic Iapetus Ocean the British sector of which closed to the south of the present Southern Uplands Wales 15 afforded insight into the nature of the late Precambrian basement of England and Wales and the relationship of sedimentary and volcanic cover sequences to this basement The Ordovician sequence in Wales is a sample of the volcanic rocks typical of a marginal basin and were examined in Pembrokeshire and Snowdonia The English Lake District 6 displays rocks from an island arc also of Ordovician age The Cadomian Orogeny Richard Simon D'Lemos, Robin A.
