Low density cellular plastics N.C. Hilyard, A. Cunningham, 2012-12-06 Foams are gas filled integral structures in which the gas is finely dispersed throughout a continuously connected solid phase The bulk density is usually substantially lower than that of the solid component and for the foams which form the focus for this book the volume fraction of the gas phase is considerably greater than 0.5 and in most instances in excess of 0.9 Many of the materials encountered in every day experience such as bread plants and trees structural materials for buildings comfort materials for domestic and automotive seating shock absorbers or car bumpers and materials for noise control have one thing in common the cellular nature of their physical structure Why are these structures so important in the natural and man made world The reasons are both technical and commercial From a technical viewpoint cellular materials offer 1 high specific stiffness and strength making them suitable for structural applications 2 close to ideal energy management hence their use in thermal and acoustic insulation vibration damping acoustic absorption and shock mitigation and 3 comfort hence their use for domestic and automotive seating

EBOOK: Managing Brands LAFORET, SYLVIE, 2009-12-16 **EBOOK Managing Brands** Managing Packaging Design for Sustainable Development Daniel Hellström, Annika Olsson, 2016-12-14 Packaging design is a powerful vehicle for making our lives friendlier our planet greener and our businesses richer It is an essential link between the producer and the customer where it contributes to the positioning and presentation of a product and on many occasions the use of the product after purchase What is missing is a compass that can guide practitioners in the right direction This is particularly so in the field of packaging where the routes you take may contradict rather than contribute to sustainable development Managing Packaging Design for Sustainable Development A Compass for Strategic Directions emphasizes the need to rethink
