### Abstract:

Lianlian Zeng. Meta-Analysis of Traditional Chinese Medicine Injection Combined with Paclitaxel and Cisplatin or Carboplatin Chemotherapy in The Treatment of Lung Cancer. Clin Onc. 2022; 6(1): 1-14

### Keywords:

## 1. Abstract

### 1.1 Objective

To investigate the effect of traditional Chinese medicine injection combined with paclitaxel, cisplatin or carboplatin chemotherapy regimen (TP Chemotherapy Regimen) on lung cancer.

### 1.2 Methods

PuBMed, EMBASE, the Cochrane Library (issue 2,2021), China biomedical literature database(CBM),China journal full text database (CNKI), Wan Fang database(WANG FANG) and Chinese scientific and technological journal database (VIP) were searched from the establishment of the database to February 2021. Two researchers conducted literature screening and quality evaluation in strict accordance with the inclusion and exclusion criteria and the bias risk assessment tool of Cochrane 5.3 and used stata5.1 software for statistical analysis.

### 1.3 Results

62 RCTs were finally included,with a total sample size of 4666 cases, involving 9 intervention measures. The results of network meta-analysis showed that the efficacy and quality of life of traditional Chinese medicine injection combined with TP Chemotherapy in the treatment of lung cancer were better than that of TP

alone, and the toxicity and side effects were lower than that of TP chemotherapy alone. In addition, in terms of quality of life, Sheng Fufeng+TP was better than compound Sophora flavescens+TP and Kangai+TP. In the incidence of gastrointestinal reactions, Sheng Fufeng+TP was lower than Kangshite+TP and Borenia javanica oil emulsion+TP.

### 1.4 Conclusion

Traditional Chinese medicine injection combined with TP chemotherapy regimen has certain advantages in the treatment of lung cancer. Based on the results of network meta-analysis and the ranking results of various outcome indicators, various traditional Chinese medicine injections have their own advantages in clinical work. Different traditional Chinese medicine injections should be selected in combination with the results of this study and the characteristics of patients. However, there are some limitations in this study, and the research results should be treated with caution.

## 2. Back Ground

Primary bronchial lung cancer is still one of the highest malignant tumor incidence rate and death rate in the world nowadays, its prevalence rate in patients with tumor reached 11.8%, the number of deaths accounted for 18.4% of the total cancer deaths [1].
