

# COOVADIA'S PAEDIATRICS & CHILD HEALTH

A manual for health professionals  
in developing countries

First published in 1984, and now in its seventh edition, *Coovadia's Paediatrics and Child Health* is a well known and trusted text book in the field of paediatrics and is ideal for paediatric courses within the Bachelor of Medicine (MBChB) and Bachelor of Nursing (BScN) programmes. It is also an important resource for health care professionals and community care practitioners.

This comprehensive introduction to paediatrics and child health emphasises a primary care approach from a southern African perspective to enable practitioners to deal effectively with local health problems. The book maintains a problem-based approach to facilitate a full evaluation of the sick child from a holistic perspective. There are chapters devoted to social paediatrics and child health, as well as a comprehensive list of topics dealing with all aspects of childhood disease including oral and dental conditions, and dermatological or specialty conditions.

The seventh edition has been extensively updated by contributors from medical schools across South Africa to reflect current developments in the field.

## New to this edition:

- Chapters on childhood vaccines, primary immunodeficiency diseases, and ethical issues in paediatrics
- Each chapter contains a new feature called 'Practice points'. These provide application for students by referring to issues which they will face in practice, for example, ethical issues, drug availability or reference to the major guidelines and their implications.
- Many chapters make reference to Integrated Management of Childhood Illness (IMCI) principles and the Essential Drugs List (EDL) of South Africa.

"This edition is remarkable for having accomplished the task of retaining clarity, brevity and completeness in the text, and including much updated material and three new chapters. This is a compelling achievement given the huge changes in experience and information in health, and great social transformation since the first edition was published thirty years ago."

**The New Pediatrics** Dorothy Pawluch, 2017-07-05 When antibiotics became readily available in the 1950s the danger of life threatening infectious childhood diseases virtually disappeared In that era pediatricians broadened the core professional task of their specialty the prevention and treatment of such diseases to incorporate the behavioral and psychosocial problems of children and adolescents Pediatricians themselves began to refer to this changing emphasis as the new pediatrics and to see the trend as a natural progression of their specialty into new areas of care At the same time there arose widespread disaffection among practicing general pediatricians defection to other areas of practice and a decline in the popularity of pediatrics as a specialty choice In analyzing the emergence of the new pediatrics as a case study within medical sociology Pawluch shows how professional concerns and interests influence debate around social problems As sociologists began to take greater interest in the problems of childhood and as children's lives became increasingly medicalized as some have argued it is at least in part because of pediatricians willingness to endorse medical definitions for certain social problems and to provide treatment for them Pawluch's underlying concern is that medical professionals have begun to make claims for authority in the definition of what constitutes the social problems of childhood Among the topics she examines are

the dissatisfied pediatrician syndrome the potential for a crisis in oversupply of pediatricians and competing providers of services the push for expansion into new areas of care and possible future developments in this specialty
