Pain And Disability Clinical Behavioral And Public Policy Perspectives:

Pain and Disability Institute of Medicine, Committee on Pain, Disability, and Chronic Illness Behavior, 1987-01-01 Pain is the most common complaint presented to physicians. Yet pain is subjective; it cannot be measured directly and is difficult to validate. Evaluating claims based on pain poses major problems for the Social Security Administration (SSA) and other disability insurers. This volume covers the epidemiology and physiology of pain, psychosocial contributions to pain and illness, promising ways of assessing and measuring chronic pain and dysfunction, clinical aspects of prevention, diagnosis, treatment, and rehabilitation, and how the SSA's benefit structure and administrative procedures may affect pain complaints.
