Planets Their Origin Development:

The Planets, Their Origin and Development, by Harold C. Urey Harold Clayton Urey, 1952 The Planets Their Origin and Development Harold C. Urey Harold C Urey, 2019-09-19 This is a study based on observation rather than mathematical theory in which an attempt is made to discover facts and relationships that give evidence about the course of solar evolution. The author's principle conclusions are that the earth and other territorial planets were formed at much lower temperatures than has generally been supposed and that a more uniform distribution of iron throughout the silicate phases of the Earth existed in the past than exist now while the iron core of the Earth has been formed at least partly during geological time. For convenience of discussion the author divides the course of planetary evolution into five stages. Stage 1 is assumed to start with an interstellar dust cloud such as the globes of Bok and Reill. Stage 2 he calls the preprotoplanet and protoplanet phase when temperatures had risen to their present levels. Stage 3 is the high temperature stage and stage 4 is the second low temperature stage. In his final stage the author outlines possible origins for the atmospheres of the earth, Venus and Mars. It may at first surprise that a physical chemist should write a book on the origin and development of the planets. But as the physical problems are many and involved and as the evidence in regard to them is very detailed the physical chemist can obviously make valuable contributions to this subject. Mr Urey has discussed his views with astronomers, physicists, geophysicists and many other experts and frequently made use of their critical appreciation.

Comets and the Origin of Life Cyril Ponnamperuma, 2012-12-06 The return of Halley's Comet in 1986 has generated much excitement in the scientific community with preparations already afoot for an International Comet Watch and a comet launch by the European Space Community, the Japanese and Soviet Space Scientists. The meeting held at the University of Maryland in October 1980 was primarily stimulated by the preparations for further study of this comet and by one of the most important unanswered questions related to comets, namely whether they may have made a contribution to the origin of life on earth. Our understanding of the role of comets in the origin of life must necessarily come from our studies of the astronomy and the chemistry of comets. Some clues to the processes which led to the formation of organic molecules and eventually to the appearance of life have come from these studies of comets, perhaps the most ancient of all objects in our solar system. Whether there is however a biology of comets still remains to be seen although some claims have been made that perhaps comets might themselves provide an environment for even the beginnings of life. Scientists with the latest available information on comets and differing opinions as to the role of comets in the origin of life attended this symposium. The formal papers presented are now being made available to the students of chemical evolution within the pages of this volume.
