People and Plants in Ancient Western North America Paul E. Minnis, 2004 The environmental diversity of North America is astounding from circumpolar tundra with a small number of plants more than a few centimeters tall to the lush semitropical forests of the southeastern United States and the Caribbean Basin No less remarkable is the record of plant usage by the various indigenous peoples who have been living here for more than 12 000 years For the vast majority of this time their livelihood food shelter fuel and medicine depended on their knowledge and use of the plants that surrounded them The most comprehensive overview in more than half a century on the interconnectedness of people and plants this book and its companion volume *People and Plants in Ancient Eastern North America* present the latest information on three major topics the uses of native plants the history of crops and their uses and the impact of humans on their environment They not only contribute to our understanding of the lives of prehistoric people but also serve as guides for designing sustainable living today **Geography in America at the Dawn of the 21st Century** Gary L. Gaile, Cort J. Willmott, 2004-02-05 Geography in America at the Dawn of the 21st Century surveys American geographers current research in their specialty areas and tracks trends and innovations in the many subfields of geography As such it is both a state of the discipline assessment and a topical reference It includes an introduction by the editors and 48 chapters each on a specific specialty The authors of each chapter were chosen by their specialty group of the American Association of Geographers AAG Based on a process of review and revision the chapters in this volume have become truly representative of the recent scholarship of American geographers While it focuses on work since 1990 it additionally includes related prior work and work by non American geographers Includes a foreword by the eminent geographer Gilbert White **The Settler Sea** Traci Brynne Voyles, 2021-11 2022 Choice Outstanding Academic Title 2022 WHA Caughey Western History Prize for the most distinguished book on the American West Can a sea be a settler What if it is a sea that exists only in the form of incongruous head scratching contradictions a wetland in a desert a wildlife refuge that poisons birds a body of water in which fish suffocate Traci Brynne Voyles's history of the Salton Sea examines how settler colonialism restructures physical environments in ways that further Indigenous dispossession racial capitalism and degradation of the natural world In other words The Settler Sea asks how settler colonialism entraps nature to do settlers work for them The Salton Sea Southern California's largest inland body of water occupies the space between the lush agricultural farmland of the Imperial Valley and

the austere desert called America's Sahara The sea sits near the boundary between the United States and Mexico and lies at the often contested intersections of the sovereign lands of the Torres Martinez Desert Cahuilla and the state of California Created in 1905 when overflow from the Colorado River combined with a poorly constructed irrigation system to cause the whole river to flow into the desert this human maintained body of water has been considered a looming environmental disaster The Salton Sea's very precariousness the way it sits uncomfortably between worlds existing always in the interstices of human and natural influences between desert and wetland between the skyward pull of the sun and the constant inflow of polluted water is both a symptom and symbol of the larger precariousness of settler relationships to the environment in the West and beyond Voyles provides an innovative exploration of the Salton Sea looking to the ways the sea its origins and its role in human life have been vital to the people who call this region home [Dictionary Catalog of the Department Library](#) United States.
