Prostaglandin Inhibitors In Tumor Immunology And Immunotherapy:

Prostaglandin Inhibitors in Tumor Immunology and Immunotherapy Jules E. Harris, Donald P. Braun, Kenning M. Anderson, 2024-12-06 This book provides an updated overview of eicosanoid metabolism It also presents a timely discussion of eicosanoid metabolism in the process of tumor cell metastasis in chemoprotection and radioprotection associated with cancer therapy and in cell differentiation The book focuses on the role of eicosanoids in the immunology of malignant disease This includes how various immune cell populations in cancer are affected by the secretion and action of various eicosanoids and metabolites of eicosanoids and how these processes may be affected by various pharmacological manipulations and interventions to augment anti tumor immunity Head and neck cancer is covered in great detail to illustrate a cancer in humans where these considerations are particularly relevant This important volume demonstrates that the principal factor in cancer patient immunologic deficiency is related to excess secretion by monocytes of prostaglandins Inhibitors in Tumor Immunology and Immunotherapy Jules E. Harris, Donald P. Braun, Kenning M. Anderson, 1994-03-28 This book provides an updated overview of eicosanoid metabolism It also presents a timely discussion of eicosanoid metabolism in the process of tumor cell metastasis in chemoprotection and radioprotection associated with cancer therapy and in cell differentiation The book focuses on the role of eicosanoids in the immunology of malignant disease This includes how various immune cell populations in cancer are affected by the secretion and action of various eicosanoids and metabolites of eicosanoids and how these processes may be affected by various pharmacological manipulations and interventions to augment anti tumor immunity Head and neck cancer is covered in great detail to illustrate a cancer in humans where these considerations are particularly relevant This important volume demonstrates that the principal factor in cancer patient immunologic deficiency is related to excess secretion by monocytes of prostaglandins **Redox-Genome Interactions in** Health and Disease Jürgen Fuchs, Maurizio Podda, Lester Packer, 2003-09-12 At the nexus of advances in molecular genetics and findings in redox biology this volume elaborates on the dynamics governing cellular redox states and aggregates the body of evidence linking oxidative stress and redox modulation with a host of monogenetic and polygenetic diseases

Immunotherapy and Small Molecule Inhibitors as Combinational Cancer Therapeutics Mohd Wajid Ali Khan, Shariq Qayyum, Saravanan Rajendrasozhan, Subhash Kumar Tripathi, Mohammad Azhar Aziz, 2023-09-26 Cancer is a multifactorial chronic disease in which several factors contribute to its pathogenesis and progression Our immune system is designed to continuously identify and destroy tumor or aberrant cells However a compromised immune system has been associated with the development of cancer In such immune state cancer cells often develop the ability to hide from the immune surveillance network and adopt intelligent survival tactics which are continuously developing Therefore researchers are focusing on boosting anti tumor immunity by developing novel cancer immunotherapies Adoptive cell based cancer therapies are being used including in vitro expansion and activation of immune effector cells and transfer to the patients Tumor cells can be

eliminated either by directly targeting the tumor cells or by enhancing various functions of the immune system Other than CD8 and NK cell based cytotoxic cancer cell killing there are antigen presenting cells APCs such as dendritic macrophages B cells and T cells which aggressively participate in the activation of anti tumor immune response against many different cancers myeloma lymphoma colorectal melanoma breast colon prostate and ovarian cancers Radioprotectors Edward A. Bump, Kamal Malaker, 2021-12-24 It is essential to minimize damage to normal tissues during radiation therapy and many strategies have been employed in finding the best methods for radioprotection This book integrates chemical biological and clinical perspectives on these strategies and developments providing a comprehensive treatise It emphasizes new concepts in radioprotection aiming to inspire further basic science and clinical progress in radioprotector research Radioprotectors Chemical Biological and Clinical Perspectives includes the following topics Early research on radioprotectors WR 2721 an aminothiol prodrug as a radioprotector New results with naturally occurring thiols Nitroxides as effective radioprotectors in vitro and in vivo Radioprotection observed with radical scavengers or antioxidants Bone marrow radioprotection with cytokines and biological modifiers Multiple mechanisms of altering radiation response by eicosanoids Vascular response to radiation and the importance of vascular damage to normal tissue Modifiers of radiation induced apoptosis Survey of clinical trials with radioprotectors Radiation biologists and oncologists cancer researchers and toxicologists will benefit from the findings discussed and strategies for future research The Oncobiology of the Prostate D.P. Wood, K.V. Honn, 2000-12-20 Prostate cancer PCa is the most common newly diagnosed cancer among men in the United States today With the advent of the prostate specific antigen PSA test the number of newly diagnosed cases has increased tremendously The rates of PCa have increased so dramatically over the last decade that the age adjusted incidence rate of PCa is no greater than that for any other cancer among men in the United States Although PCa rates have risen steadily since 1973 there has been a dramatic acceleration in the late 1980s which has been associated with the introduction and use of PSA for screening and early detection There is now some evidence that the rates may be levelling off and even decreasing in some areas After lung cancer PCa is the leading cause of death due to cancer in men in the United States Although PCa can occur in younger men it is essentially a cancer of elderly men The highest rates of PCa in the world occur among African American men in the United States African Americans have higher rates than Caucasians at all age levels in the United States and adjusting for social economic status does not appear to account for this difference to any appreciable extent There is no clear reason why PCa rates are so much greater among African Americans compared with Caucasians in the United States The reported rates in Africans are substantially lower than those of an African American suggesting that environmental factors have an influence on PCa In spite of this substantial impact on our society PCa remains a relatively understudied disease with an essentially unknown etiology The reviews contained in this book are by no means exhaustive We have however attempted to provide information regarding the pathology of prostate cancer the status of diagnostic and prognostic markers as well as a

discussion of our understanding of the molecular basis for the disease The biology of prostate cancer is covered with a discussion on the role of apoptosis in prostate cancer and the suggestion of it being the target for new therapeutic development as well as the role played by integrins and angiogenesis. The status of current therapies both hormonal and chemotherapy are also discussed This volume should provide a useful background for individuals wishing to commence an in depth understanding of prostate cancer **Prostaglandins, Leukotrienes and Other Eicosanoids** Friedrich Marks, Gerhard Fürstenberger, 2008-11-21 Polyunsaturated fatty acids are essential for human cell metabolism As precursors of a very large and extremely versatile family of signaling compounds they play a key role in intracellular communication Eicosanoids constitute one of the most abundant and prominent subfamilies of these fatty acid derivatives which are formed primarily along oxidative pathways Prostaglandins leukotrienes and related eicosanoids have a modulatory function in mammalian cells and are responsible for tissue responses such as inflammation or wound repair Increasing activity in eicosanoid research sheds new light on today s most common diseases including atherosclerosis cancer Alzheimer s allergies and rheumatic diseases The recent advances already have far reaching implications in medicine This detailed account written by leading experts covers the ground breaking developments in recent eicosanoid research The topics span eicosanoid biogenesis new aspects of their pathophysiology for example their influence on the cardiovascular system as well as the clinical application of synthetic eicosanoids and their antagonists Researchers and students working in biochemistry or in pharmaceutical physiological medicinal and neurochemistry will value this informative introduction to one of the most rapidly Immunotherapy in Translational Cancer Research Laurence J. Hamilton, 2012-12-06 This book focuses on the developments in the field of lipid analysis providing an up to date review of the analytical techniques available to chemists and technologists to identify complex molecules The requisite theoretical background will be provided for individual techniques together with their strengths and weaknesses and a guide to the enormous range of commercial applications It will be an invaluable reference source to all sectors of the oils and fats industry where accurate labeling of foods food contamination and adulteration are issues of increasing interest and concern Cancer Immunology, Immunotherapy, 1996 **Cancer Immunotherapy** George C. Prendergast, Elizabeth M. Jaffee, 2011-04-28 There has been major growth in understanding immune suppression mechanisms and its relationship to cancer progression and therapy This book highlights emerging new principles of immune suppression that drive cancer and it offers radically new ideas about how therapy can be improved by attacking these principles Following work that firmly establishes immune escape as an essential trait of cancer recent studies have now defined specific mechanisms of tumoral immune suppression It also demonstrates how attacking tumors with molecular targeted therapeutics or traditional chemotherapeutic drugs can produce potent anti tumor effects in preclinical models This book provides basic translational and clinical cancer researchers an indispensable overview of immune escape as a critical trait in cancer and how applying specific combinations of immunotherapy and chemotherapy to attack this trait may radically improve the treatment of advanced disease Offers a synthesis of concepts that are useful to cancer immunologists and pharmacologists who tend to work in disparate fields with little cross communication Drs Prendergast and Jaffee are internationally recognized leaders in cancer biology and immunology who have created a unique synthesis of fundamental and applied concepts in this important new area of cancer research Summarizes the latest insights into how immune escape defines an essential trait of cancer Includes numerous illustrations including how molecular targeted therapeutic drugs or traditional chemotherapy can be combined with immunotherapy to improve anti tumor efficacy and how reversing immune Recent Advances of Human Tumor Immunology and suppression by the tumor can cause tumor regression Immunotherapy Kōkichi Kikuchi, Noriyuki Satō, Benoît van den Eynde, 1999-09 Cancer Immune Therapy Gernot Stuhler, Peter Walden, 2002-12-03 Cure or life with cancer What can be achieved by cancer immune therapy The past decade has seen substantial advancements in tumor immunology Much of the new knowledge has been translated into new strategies for cancer treatment and into clinical trials Some of these trials herald future breakthroughs others have been disappointing and have prompted intensive search for alternatives Major contributors to the field summarize the knowledge on the molecular and cellular mechanisms of tumorigenesis critically review the instruments of the immune system that might be exploited for therapy and discuss the clinical experiences with the different immune therapy concepts Researchers

Subcommittee on Biological Response Modifiers, 1983 **Cancer Immunology** Nima Rezaei, 2020-01-03 This book focusing on the immunopathology of cancers is published as part of the three volume Springer series Cancer Immunology which aims to provide an up to date clinically relevant review of cancer immunology and immunotherapy Readers will find detailed descriptions of the interactions between cancerous cells and various components of the innate and adaptive immune system The principal focus however is very much on clinical aspects the aim being to educate clinicians in the clinical implications of the latest research and novel developments in the field In the new edition of this very well received book first published in 2015 the original chapters have been significantly updated and additional chapters included on for example current knowledge on the roles of T helper cells and NK cells in tumor immunity the part played by oncoviruses in the development of various cancers and the applications of fluorescent in situ hybridization bioluminescence and cancer molecular and functional imaging Cancer Immunology A Translational Medicine Context will be of special value to clinical immunologists hematologists and oncologists Immune Checkpoint Inhibitors in Cancer Fumito Ito, Marc Ernstoff, 2018-09-03 Get a quick expert overview of the latest clinical information and guidelines for cancer checkpoint inhibitors and their implications for specific types of cancers This practical title by Drs Fumito Ito and Marc Ernstoff synthesizes the most up to date research and clinical guidance available on immune checkpoint inhibitors and presents this information in a compact easy to digest resource It s an ideal concise reference for trainee and practicing medical oncologists as well as those in research Discusses the current understanding of how to best harness the immune system against different types of cancer at various stages Helps you translate current research and literature into practical information for daily practice Presents information logically organized by disease site Covers tumor immunology and biology toxicities associated with immune checkpoint inhibitors and future outlooks Consolidates today s available information on this timely topic into one convenient resource Combinatorial Approaches to Enhance Anti-Tumor Immunity: Focus on Immune Checkpoint Blockade Therapy Patrik Andersson, Christian Ostheimer, 2019-12-27 The immune system harbors great potential for controlling and eliminating tumors Recent developments in the field of immuno oncology has led to unprecedented clinical benefits for a broad spectrum of solid tumors However immunotherapy IT approaches currently have several limitations including i low response rate ii development of resistance and iii causing severe immune related adverse effects IrAEs which underline the importance of adequate patient selection Importantly IT holds promising synergistic potential when combined with standard of care chemotherapy radiotherapy RT and anti angiogenic therapy AAT as part of multi modal oncologic treatment regimes Published data suggest that there are potential synergy between RT and AAT which

ultimately could help potentiate the response to IT However the complex interactions between RT and IT and or AAT remain poorly understood Many research questions including optimal timing scheduling and dosing as well as patient selection and side effects of combined therapy approaches remain to be addressed This Research Topic aims to give a comprehensive overview of the current field with particular emphasis on the future outlook of RT and AAT as complementary approaches to improve IT in solid tumors Research Awards Index ,1988 Lipid Metabolism in Tumor Immunity Yongsheng Li,2021-03-19 This book focuses on lipid metabolism in tumor immunity covering the application of lipidomics in tumor immunity and all aspects of lipid metabolism in tumor microenvironment During the progression of tumors tumor cells and immune cells interact in a dynamic microenvironment Targeting the immune system has a high potential for treating cancer However due to the high heterogeneity of the tumor microenvironment only a small percentage of patients experience such clinical benefits of tumor immunotherapy Therefore understanding the tumor microenvironment is crucial for tumor immunity Recently lipid metabolism is an emerging research direction and contributes to cell survival and biofunctions in tumor microenvironment which is of great interest and significance to be elucidated This book provides the doctors researchers and scientists with a cutting edge overview of the lipid metabolism and its role in tumor immunity It also yields benefits for pharmaceutical companies regarding drug discovery
