

PROSTAGLANDINS, THROMBOXANES AND LEUKOTRIENES ARE OXYGEN METABOLITES OF ARACHIDONIC ACID FORMING A FAMILY OF LIPIDIC SUBSTANCES WITH INTRINSIC BIOLOGICAL ACTIVITIES.

PROSTAGLANDINS

LEUKOTRINES

THROMBOXANES

- Prostaglandins are lipid autacoids derived from arachidonic acid.
- They both sustain homeostatic functions and mediate pathogenic mechanisms, including the inflammatory response.

- The leukotrienes are a family of biologically active molecules, formed by leukocytes, mastocytoma cells, macrophages, and other tissues and cells in response to immunological and nonimmunological stimuli.

- Thromboxane A₂ (TXA₂), together with prostacyclin (PGI₂), maintain vascular homeostasis and platelet aggregation.
- PGI₂ is a vasodilator and platelet aggregation inhibitor, and TXA₂ is a vasoconstriction and platelet aggregation promoter.

Vane, Rodolfo Paoletti, Peter Ramwell, Patrick Y-K Wong, 2013-11-11 The International Symposium on Prostaglandins and Related Compounds first held in Vienna 1972 revisited the city after 24 years for the 10TH Symposium For the many researchers working in this multi disciplinary field it was an opportunity to exchange their experiences and share new data with colleagues from all around the world This scientific exchange was largely encouraged by the unseasonably cold and rainy weather For the first time there was quite a large attendance from the former Communist countries Eugene Garfield prepared a key note address delivered during the meeting The Scientist 1996 12 reviewing the contribution of the Nobel Laureates U S von Euler I R Vane S K Bergstrom and B I Samuelsson discussing the relevance of the more than 40 000 papers in this area published since 1991 Overall there is still a rapidly growing interest and in particular a great variety of clinical applications of this family of compounds which were discussed in detail during the meeting Beside the lectures there were 19 workshops covering nearly all the topics of key interest All the speakers were invited to prepare a manuscript which has resulted in the volume now in your hands Special thanks to Dr Patrick Wong and the new publisher of this series who helped to publish the proceedings in the usual quality and reasonable period of time Looking forward to seeing all of you again in Florence in 1999 hopefully with much more sun **Prostaglandins, Leukotrienes, and Lipoxins** J. Harris, Donald P. Braun, Kenning M. Anderson, 2024-12-06 This book provides an updated overview of eicosanoid metabolism It also presents a timely discussion of eicosanoid metabolism in the process of tumor cell metastasis in chemoprotection and radioprotection associated with cancer therapy and in cell differentiation The book focuses on the role of eicosanoids in the immunology of malignant disease This includes how various immune cell populations in cancer are affected by the secretion and action of various eicosanoids and metabolites of eicosanoids and how these processes may be affected by various pharmacological manipulations and interventions to augment anti tumor immunity Head and neck cancer is covered in great detail to illustrate a cancer in humans where these considerations are particularly relevant This important volume demonstrates that the principal factor in cancer patient immunologic deficiency is related to excess secretion by monocytes of prostaglandins **Advances in Prostaglandin and Thromboxane Research: Chemistry of the prostaglandins and leukotrienes** Bengt Samuelsson, Rodolfo Paoletti, 1985 Eicosanoids in the Cardiovascular and Renal Systems P.V. Research edited by Sultan M M Karim was published by MTP Press in three volumes in 1975 and 1976 A glance at those books illustrates the progress that has been made since then The thromboxanes were mentioned twice first publication 1975 and prostacyclin not once first publication 1976 leukotrienes were only on the horizon The amazing generation of research data in the last 10 15 years has given new broad insights into many areas including asthma inflammation renal cardiovascular and gastrointestinal diseases and in reproduction and has led in some instances to real clinical benefit This series *Advances in Eicosanoid Research* reflects the current understanding of prostaglandins thromboxanes and leukotrienes The aim is to provide an introductory background to each topic and the most up to date information available Although each book stands alone the eicosanoids cut across many boundaries in their basic actions selected chapters from each book in the series will provide illuminating and productive information for all readers which will advance their education and research In the production of this series I must acknowledge with pleasure my collaboration with editors and authors and the patient endeavours of Dr Michael Brewis and the staff at MTP Press

Immunopharmacology in Autoimmune Diseases and Transplantation L. Endresen, Ø. Førre, H.E. Rugstad, 2013-11-11 This book incorporates the latest advances in immunopharmacological treatment. One objective has been to provide appropriate bridges between the basic sciences of immunology and pharmacology on the one hand and clinical medicine on the other. A further intention has been to emphasize those advances in immunology and pharmacology that are of clinical importance while retaining those facts that while not new remain clinically useful. The immunology section provides the necessary background for immunopharmacological treatment. The chapters on individual cell types include normal surface markers, mode of activation and activation markers and functions in health and disease. The chapters on pharmacology give comprehensive information on immunosuppressive drugs in regular use today, their biochemical and cellular mechanisms of action, pharmacokinetics, dosage regimens, therapeutic responses, adverse reactions and drug interactions and tolerance. In addition, certain therapeutic principles that are still in an experimental phase are described, for example, immunotoxins, thymic hormones and interleukins. The book presents comprehensive information on various autoimmune diseases, the etiopathogenetic immune mechanisms where these are known and the current possibilities for immunopharmacological intervention. The specific disease section also covers rare situations, fluctuations in disease patterns and subgroups of patients and immunopharmacological treatment in these situations. Altogether the book represents a practical textbook for clinicians and advanced students who want to be updated on therapeutic principles with regard to autoimmune diseases and transplantation.

Prostaglandins in Cancer Research Enrico Garaci, Rodolfo Paoletti, M. Gabriella Santoro, 2012-12-06 Arachidonic acid metabolites are known to play a regulatory role in a number of biological systems in which they function as microenvironmental hormones and intracellular signal mediators. One of the most exciting areas of research of these compounds is the one that studies the relationship between prostaglandins and tumor cell growth and function. In the last few years there has been an extraordinary evolution of data on prostaglandins and related compounds and cancer. This volume is based on papers presented at the 1986 International Conference on Prostaglandins and Cancer organized by the Italian National Research Council and the II University of Rome and held in Rome, Italy, in June 1986. This Conference brought together oncologists and specialists in the areas of prostaglandin chemistry, biochemistry, pharmacology, physiology, cellular and molecular biology to overview the actual state of knowledge on the role of eicosanoids in cancer and to focus on the key questions that need to be answered. The picture that comes out of this book describes a very complicated network of interactions between arachidonic acid metabolites and different aspects of the complex phenomenon cancer. Eicosanoids participate in carcinogenesis initiation and promotion and their relationship with tumor promoters and growth factors is well established. During cancer growth different prostaglandins

can have different roles in the regulation of cell proliferation and differentiation and in metastasis formation meanwhile evidence is accumulating for a possible use of some of these compounds as antineoplastic agents **Advances in**

Prostaglandin and Thromboxane Research: Prostaglandins and perinatal medicine Bengt Samuelsson, Rodolfo Paoletti, 1978 Lipid Mediators Fiona M. Cunningham, 2016-10-27 The Handbook of Immunopharmacology Lipid Mediators covers a comprehensive overview of lipid mediators from synthesis through to inhibition The book discusses the metabolism of arachidonic acid the measurement of fatty acids and their metabolites and the biological properties of cyclooxygenase products The text also describes other essential fatty acids their metabolites and cell cell interactions the inhibitors of fatty acid derived mediators as well as the biosynthesis and catabolism of platelet activating factor The cellular sources of platelet activating factor and related lipids the biological properties of platelet activating factor and the effects of platelet activating factor receptor antagonists are also considered Immunopharmacologists immunologists and pharmacologists will find the book invaluable **Recent Progress in Hormone Research** Roy O. Greep, 2013-10-22 Recent Progress in Hormone Research presents the proceedings of the 1977 Laurentian Hormone Conference held at Mont Tremblant Quebec Canada from August 28 through September 2 1977 The book discusses the concepts and perspectives of reproductive endocrinology and the mechanism of action of hypothalamic hormones in the anterior pituitary gland and specific modulation of their activity by sex steroids and thyroid hormones The text also describes the morphology of insulin secretion and binding studies on relaxin and the interrelationships between calcium calcemic hormones and gastrointestinal hormones and calcitonin binding sites in bone The hormonal regulation of bone formation neural control of ACTH and the genetic regulation of mammalian glucuronidase are also considered The book further tackles the crystal structure molecular conformation binding and structure function relationships of the thyroid hormone the thyroxine transport proteins of plasma and the pathways of metabolism of thyroid hormones Endocrinologists biochemists and physiologists will find the text invaluable
