

# Functions of Prostate Gland

- Prostate gland's primary job is to supply the testes with prostatic fluid, which is then transformed into sperm. It contributes approximately 20 to 30 percent of the total volume of sperm.
- It contains an enzyme known as 5-alpha reductase, which is responsible for the conversion of testosterone into a form known as dihydrotestosterone, which is more biologically active (DHT).
- Because of the contraction that takes place in this gland during ejaculation, the prostate blocks the opening that leads from the urinary bladder to the urethra.
