Revisiting Seed and Soil: A New Approach to Target Hibernating Dormant Tumor Cells, 2nd edition Dalit Barkan,Ann F. Chambers,Angélica Santiago-Gomez,2023-03-07 Metastasis is the major cause of mortality in cancer patients Metastases can be present at the time of diagnosis or can occur years or decades after the removal of the primary tumor and treatment This long latency in the manifestation of recurrent metastatic disease is explained clinically by the persistence of quiescent tumor cells that disseminated early in the course of the disease from the primary tumor to select distant organs These residing disseminated tumor cells DTCs at distant organs lay dormant and asymptomatic until reawakened to form overt metastases Importantly the quiescent nature of these hibernating DTCs facilitates their resistance to conventional therapies that target actively dividing tumor cells Therefore unraveling the biology of dormancy and reactivation of the residing DTCs to life threatening lesions is of utmost importance in order to develop new therapeutic strategies to prevent the recurrent metastatic disease from ever emerging or to better treat these recurrent cancers The mechanisms underlying the biology of tumor dormancy and their reactivation to overt metastases are just beginning to emerge thanks to a growing appreciation of the potentially chronic nature of some cancers and the development of experimental model systems for their study In this Research Topic we will follow the journey of circulating tumor cells CTCs dispatching from the primary site until their successful lodging into a new and foreign site to become DTCs We will explore the intrinsic mechanisms along with microenvironmental cues and niches that they encounter during their journey that may dictate their fate *Journal of the National Cancer Institute* ,2014

Principles and Practice of Surgical Oncology Howard Silberman, Allan W. Silberman, 2012-03-28 Principles and Practice of Surgical Oncology uniquely emphasizes a multidisciplinary integrated approach to the treatment of solid tumors. It presents treatment strategies that combine surgery with preoperative or postoperative adjunctive chemotherapy, hormonal therapy and/or radiation therapy to achieve optimal outcome. The book features contributions from surgeons, basic scientists, pathologists, radiologists, radiation therapists and medical oncologists and offers a comprehensive presentation of genetics, molecular biology, pathogenesis and multimodal therapeutic approaches. A unique feature of the book is a commentary following each chapter which describes alternative approaches and discusses controversial areas of current therapy. A companion Website will offer the fully searchable text with images.

Biomarkers in Urologic Cancer, An Issue of Urologic Clinics of North America Kevin R. Loughlin, 2016-01-19 The past decade has been marked by the acceleration of our understanding of the molecular biology of cancer. Simultaneously there have been increasing exigencies to diagnose, treat and follow cancer patients more economically. Biomarkers represent the marriage of science and economics. Biomarkers offer the potential to increase the precision of diagnosis, prognosis and surveillance of urological malignancies. This issue presents the cutting edge advances of biomarker technology to urologic oncology.

Best Care at Lower Cost Institute of Medicine, Committee on the Learning Health Care System in America, 2013-05-10 America's health care system has become too complex and costly to continue business as usual. Best Care at Lower Cost explains that inefficiencies, an overwhelming amount of data and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness. According to this report, the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost. The costs of the system's current inefficiency underscore the urgent need for a systemwide transformation. About 30 percent of health spending in 2009, roughly 750 billion

was wasted on unnecessary services excessive administrative costs fraud and other problems Moreover inefficiencies cause needless suffering By one estimate roughly 75 000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state This report states that the way health care providers currently train practice and learn new information cannot keep pace with the flood of research discoveries and technological advances About 75 million Americans have more than one chronic condition requiring coordination among multiple specialists and therapies which can increase the potential for miscommunication misdiagnosis potentially conflicting interventions and dangerous drug interactions Best Care at Lower Cost emphasizes that a better use of data is a critical element of a continuously improving health system such as mobile technologies and electronic health records that offer significant potential to capture and share health data better In order for this to occur the National Coordinator for Health Information Technology IT developers and standard setting organizations should ensure that these systems are robust and interoperable Clinicians and care organizations should fully adopt these technologies and patients should be encouraged to use tools such as personal health information portals to actively engage in their care This book is a call to action that will guide health care providers administrators caregivers policy makers health professionals federal state and local government agencies private and public health organizations and educational institutions
