Protecting Biodiversity National Laws Regulating Access To Genetic Resources In The Americas:

Protecting Biodiversity International Development Research Centre (Canada),2000 Within the countries of South and North America are found some of the most diverse collections of flora and fauna in the world Colombia alone carries over 50 thousand different plant species This precious resource however is quickly dwindling Pharmaceutical and biotechnology companies are tapping America s genetic resources at an ever increasing rate and habitat destruction has pushed many species to extinction or to the brink of extinction Protecting Biodiversity addresses one of the most fundamental aspects of this important issue the lack of adequate national laws regulating access to and compensation for the use of local genetic resources This book is the first to compare such laws and policies across a range of countries in both the industrialized and developing worlds including Argentina Canada Colombia Costa Rica Paraguay Peru and the United States It also presents legal viewpoints conclusions and solid recommendations for future action Protecting Biodiversity is the newest reference book in the rapidly emerging legal field that combines environmental intellectual property contract and administrative law

Accessing Biodiversity and Sharing the Benefits Santiago Carrizosa,2004 The book aims to address the lack of information on the experiences of others by providing a comparative analysis of national access and benefit sharing laws and policies in the 41 Pacific Rim countries that signed the CBD It provides key insights on the main characteristics of selected access and benefit sharing ABS policies and laws their development and implementation process It contains a detailed comparative analysis of existing laws and policies It presents four case studies of countries with regulations in place and contrasts them with four case studies of countries that are struggling to develop their regulations It ends by discussing options of an international regime on ABS and a summary analysis of the main lessons and recommendations from the study

Legal Systems for the Management of Protected Areas in Italy and Ukraine Gianfranco Tamburelli,2008 **African Perspectives on Genetic Resources** Kent Nnadozie,2003 *The Custodians of Biodiversity* Manuel Ruiz,Ronnie Vernooy,2012-03-15 Globally local and indigenous approaches to conserving biodiversity crop improvement and managing precious natural resources are under threat Many communities have to deal with biopiracy for example As well existing laws are usually unsuitable for protecting indigenous and traditional knowledge and for recognizing collective rights such as in cases of participatory plant breeding where farmers researchers and others join forces to improve existing crop varieties or develop new ones based on shared knowledge and resources This book addresses these issues It outlines the national and international policy processes that are currently underway to protect local genetic resources and related traditional knowledge and the challenges these initiatives have faced In particular these themes are addressed within the context of the Convention of Biological Diversity and the International Treaty on Plant Genetic Resources for Food and Agriculture The authors broaden the policy and legal debates beyond the sphere of policy experts to include the knowledge holders themselves These are the custodians of biodiversity farmers herders and fishers in local communities Their experience in

sharing access and benefits to genetic resources is shown to be crucial for the development of effective national and international agreements. The book presents and analyzes this experience including case studies from China, Cuba, Honduras, Jordan, Nepal, Peru, and Syria. Copublished with the International Development Research Centre (IDRC). *Biological Diversity*. L. N. Petrov, 2003. One of the cornerstones of life's wonders is the vast array of species filling the planet. From plants to animals to humans, there is no shortage of beings to provide spice of life. Variety is said to be periodically. Scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes. At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when compared to the insect population. Given the biological diversity of the planet, it is incumbent upon humans to safeguard the natural beauty of the environment. To that end, conservation takes on special importance, necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us. This book is an important tool in understanding and researching the many different life forms spanning the globe. Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its conservation. Following this bibliography are author title and subject indexes to allow for further access to this information. The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life's variety. *IUCN Environmental Policy and Law Paper*, 1972. *Protecting and Promoting Traditional Knowledge*. Sophia Twarog, Promila Kapoor, 2004. Consists of papers presented at a conference on traditional knowledge in 2000. *Latin America and the Caribbean Regional Synthesis for The State of the World's Biodiversity for Food and Agriculture*. Food and Agriculture Organization of the United Nations, 2019-12-04. The Latin America and the Caribbean Regional Synthesis for The State of the World's Biodiversity for Food and Agriculture summarizes the state of biodiversity for food and agriculture in the region based largely on information provided in fourteen country reports submitted to FAO as part of the reporting process for the report on The State of the World's Biodiversity for Food and Agriculture. Biodiversity for food and agriculture is the diversity of plants, animals, and microorganisms at genetic, species, and ecosystem levels present in and around crop, livestock, forest, and aquatic production systems. It is essential to the structure, functions, and processes of these systems to livelihoods and food security and to the supply of a wide range of ecosystem services. It has been managed or influenced by farmers, livestock keepers, forest dwellers, fish farmers, and fisherfolk for hundreds of generations. The report was originally prepared as supporting documentation for an informal regional consultation on the state of Latin America and the Caribbean's biodiversity for food and agriculture held in Panama City, Panama, 8 to 10 March 2016. It was later revised based on feedback received from the participants of the informal consultation and on an additional country report. It also discusses the state of efforts to promote the sustainable use and conservation of biodiversity for food and agriculture in the region, including through the development of supporting policies.
