Protecting The Health Of The Elderly A:

Health Rights of Older People Long Thanh Giang, Theresa W. Devasahayam, 2018-04-17 The book examines the health rights of older persons who are more likely potentially to face various disadvantages in terms of healthcare access and affordability thereby impacting on health outcomes The point of departure in the analyses is that the health security of older persons is guaranteed only if a country approaches the health of its citizens out of moral obligation viewing health and well being as a right rather than an entitlement Data from five countries in the ASEAN region are analysed with the intent of highlighting the health inequalities and barriers at the societal and individual levels on the one hand as well as the gaps at the health and healthcare policy and programmatic levels within each country on the other It is also intended that the analyses of the data from the selected countries which represent different stages of development and thus income levels provide a useful comparative framework for policymakers in the ASEAN region

Perspectives on the Economics of Aging David A. Wise,2007-11-01 This book investigates several important issues in the economics of aging including the accumulation of wealth and the relationship between health and financial prosperity Examining the changes in savings behavior and investment priorities in the United States over the past few decades contributors to the volume point to a dramatic shift from employer managed defined benefit pensions to employee controlled retirement savings plans Further the legislative reforms

of the 1980s and the booming stock market of the 1990s did their share to influence individual wealth accumulation patterns of Americans. These studies also explore the relationship between health status and economic status. Considering issues like pension income and health mortality and medical care contributors present evidence from the United States, Britain, South Africa, and Russia. The volume culminates with wide-ranging discussions on a number of key topics in the field, including the innovations that have contributed to a decline in mortality rates, the various medical advances that have benefited populations over time, and the determinants of expenditures on health. The findings with regard to cross-sectional differences in health outcomes and health care utilization also pose troubling questions for policymakers seeking to democratize health care across regions and races.
