Tropical Rainforests and Agroforests under Global Change Teja Tscharntke, Christoph Leuschner, Edzo Veldkamp, Heiko Faust, Edi

Guhardja, Arifuddin Bidin, 2010-02-04 not only for land use systems that depend on the regular supply of rain or irrigation water but also for the future development of natural rainforests as drought stress has been shown to affect tree growth and species composition in old growth forests. Wright 1991, Walsh and Newbery 1999, Engelbrecht et al 2007. A drought experiment conducted in a cacao agroforestry plantation showed that this plantation was surprisingly resilient to an induced drought of more than a year. Schwendenmann et al 2009. However, droughts can have a strong impact on household incomes from agriculture; they strongly affect the vulnerability to poverty and thus have to be analyzed as important exogenous shocks to households, forcing them to adjust their behaviour and develop strategies to cope with these problems. The stability of rainforest margins is a critical factor in the protection of tropical rainforests. Tscharntke et al 2007. At present, however, rainforest margins in many parts of the tropics are far from stable, both in socio-economic and in ecological terms. For example, protected areas may attract rather than repel human settlement, which may be due to international donor investment in national conservation programs. Wittemeyer et al 2008. An alternative hypothesis is that protected areas might be compromised if leakage takes place, that is, if impacts that would take place inside the restricted area are displaced to a nearby undisturbed area. Ewers and Rodrigues 2008.

Population Ecology, Habitat Requirements, and Conservation

of Neotropical Migratory Birds Deborah M. Finch, 1991. This report was prepared in support of the National Fish and Wildlife Foundation's Neotropical Migratory Bird Conservation Program and the USDA Forest Service's role in the program. Recent analyses of data on forest-dwelling species, many of which are neotropical migrants, show population declines in many North American areas. The literature review summarizes current information on population trends of neotropical migratory birds and the factors affecting migrant populations on the breeding and wintering grounds. Opportunities for research, monitoring, and conservation of these migrants on Forest Service lands are discussed.

Tropical Rainforests Eldredge Bermingham, Christopher W. Dick, Craig Moritz, 2005-08. Synthesizing theoretical and empirical analyses of the processes that

help shape these unique ecosystems Tropical Rainforests looks at the effects of evolutionary histories past climate change ecological dynamics on the origin maintenance of tropical rainforest communities **Biodiversity Hotspots** Frank E. Zachos, Jan Christian Habel, 2011-09-15 Biodiversity and its conservation are among the main global topics in science and politics and perhaps the major challenge for the present and coming generations This book written by international experts from different disciplines comprises general chapters on diversity and its measurement human impacts on biodiversity hotspots on a global scale human diversity itself and various geographic regions exhibiting high levels of diversity The areas covered range from genetics and taxonomy to evolutionary biology biogeography and the social sciences In addition to the classic hotspots in the tropics the book also highlights various other ecosystems harbouring unique species communities including coral reefs and the Southern Ocean The approach taken considers but is not limited to the original hotspot definition *sensu stricto* and presents a chapter introducing the 35th hotspot the forests of East Australia While due to a bias in data availability the majority of contributions on particular taxa deal with vertebrates and plants some also deal with the less studied invertebrates This book will be essential reading for anyone involved with biodiversity particularly researchers and practitioners in the fields of conservation biology ecology and evolution Bat Evolution, Ecology, and Conservation Rick A. Adams, Scott C. Pedersen, 2013-09-05 Recent advances in the study of bats have changed the way we understand this illusive group of mammals This volume consist of 25 chapters and 57 authors from around the globe all writing on the most recent finding on the evolution ecology and conservation of bats The chapters in this book are not intended to be exhaustive literature reviews but instead extended manuscripts that bring new and fresh perspectives Many chapters consist of previously unpublished data and are repetitive of new insights and understanding in bat evolution ecology and conservation All chapters were peer reviewed and revised by the authors Many of the chapters are multi authored to provide comprehensive and authoritative coverage of the topics **The American Bird Conservancy Guide to Bird Conservation** Daniel J. Lebbin, Michael J. Parr, George H. Fenwick, 2010-10-15 Whether we live in cities in the suburbs or in the country birds are ubiquitous features of daily life so much so that we often take them for granted But even the casual observer is aware that birds don t fill our skies in the number they once did That awareness has spawned conservation action that has led to notable successes including the recovery of some of the nation s most emblematic species such as the Bald Eagle Brown Pelican Whooping Crane and Peregrine Falcon Despite this a third of all American bird species are in trouble in many cases they re in imminent danger of extinction The most authoritative account ever published of the threats these species face The American Bird Conservancy Guide to Bird Conservation will be the definitive book on the subject The Guide presents for the first time anywhere a classification system and threat analysis for bird habitats in the United States the most thorough and scientifically credible assessment of threats to birds published to date as well as a new list of birds of conservation concern Filled with beautiful color illustrations and original range maps the Guide is a timely important and

inspiring reference for birders and anyone else interested in conserving North America's avian fauna. But this book is far more than another shout of crisis. The Guide also lays out a concrete and achievable plan of long-term action to safeguard our country's rich bird life. Ultimately it is an argument for hope. Whether you spend your early weekend mornings crouched in silence with binoculars in hand, hoping to check another species off your list, or you've never given much thought to bird conservation, you'll appreciate the visual power and intellectual scope of these pages.

Human Values and Biodiversity Conservation Clement A. Tisdell, 2014-08-01 This pioneering book explores the influence of human values on the willingness of individuals to pay for the conservation of individual wildlife species and classes of these to be for or against their survival and to favour or oppose their harvesting.

New World Warblers Jon Curson, 2010-06-30 Following the same format as other books in the series, this guide to North American wood warblers, the parulines, looks at their distribution throughout the USA and into Central and South America. It contains a full text for each species, including wing formulae drawings. Some of the species covered find their way to the UK and Europe.
