

PROTECT THE SOURCE

Maintaining Water Resources Now and into the Future

1. Practice Conservation

One of the best ways to ensure sustainable water resources for the future is to practice conservation and smart water use practices today.

2. Support Watersheds

Watershed health is essential to protecting water supply. Most water infrastructure spending focuses on built infrastructure, but investment in watershed conservation is essential to ensure water security.

3. Ensure Quality

From source to faucet to waste, maintaining water quality requires an intersectional approach. Contaminants can enter waterways from runoff, groundwater pollution, and older infrastructure.

4. Grow Green Infrastructure

Green infrastructure is an important part of how drinking, wastewater, stormwater agencies can provide innovative, effective, affordable water services.

Boer, Joanne Vinke-de Kruijf, Gül Özerol, Hans Th. A. Bressers, 2013-05-29 In an increasingly global community of researchers and practitioners new technologies and communication means have made the transfer of policies from one country or region

to another progressively more prevalent There has been a lot of attention in the field of public administration paid to policy transfer and institutional transplantation This book aims to create a better understanding of such transfers in the water management sector These include the adoption of modern water management concepts such as integrated water resources management and forms of water governance which are strongly promoted and sometimes also imposed by various international organizations Transfers also occur within the scope of development aid or for the purpose of creating business opportunities In addition many research organisations consultancies and governmental agencies are involved in cross border work The purpose of this book is therefore to present practical examples of the transfer of modern water management from one locality to another and to critically discuss the transferability of policy and governance concepts by analysing the contextual needs and factors Case studies are included from North America Europe the Middle East and Asia It is argued that in many cases context matters in water management and that there is no panacea or universal concept that can be applied to all countries or regions with different political economic cultural and technological contexts Yet it is also shown that some countries are facing pressing and similar water management issues that cut across national borders and hence the transfer of knowledge may be beneficial
