Protection Of Aquatic Biodiversity:

Protection of Aquatic Biodiversity, 1995 **Protection of Aquatic Biodiversity** David P. Philipp, 1995 A proceedings volume based on the World Fisheries Congress held in Athens Greece in 1992 this book includes the following topics protection of aquatic biodiversity will we meet the challenge and a common conservation ethic communicating the way towards protection **Ecosystem-Based Management, Ecosystem Services and Aquatic Biodiversity** Timothy G. O'Higgins, 2020 Aquatic ecosystems are rich in biodiversity and home to a diverse array of species and habitats providing a wide variety of benefits to human beings Many of these valuable ecosystems are at risk of being irreversibly damaged by human activities and pressures including pollution contamination invasive species overfishing and climate change Such pressures threaten the sustainability of these ecosystems their provision of ecosystem services and ultimately human well being Ecosystem based management EBM is now widely considered the most promising paradigm for balancing sustainable development and biodiversity protection and various international strategies and conventions have championed the EBM cause and the inclusion of ecosystem services in decision making This open access book introduces the essential concepts and principles required to implement ecosystem based management detailing tools and techniques and describing the application of these concepts and tools to a broad range of aquatic ecosystems from the shores of Lough Erne in Northern Ireland to the estuaries of the US Pacific Northwest and the tropical Mekong Delta , **Aquatic Biodiversity Conservation and Ecosystem Services** Shin-ichi Nakano, Tetsukazu Yahara, Tohru Nakashizuka, 2016-06-02 This volume examines the topic of local biodiversity conservation in the Asia Pacific region one of the most rapidly changing areas in the world With a focus on aquatic systems this book offers insight on the state of local biodiversity challenges in management and conservation of biodiversity and newly developed methods for monitoring biodiversity In addition because the service provided by an ecosystem for humans is interlinked with conservation the final part is dedicated to evaluating the socioeconomic aspect of ecosystem services with special reference to local biodiversity In effect all contributions provide information that is invaluable for effective conservation and sustainable use of biodiversity This work will interest all stakeholders in biodiversity conservation including policy makers NPOs NGOs environment related industries and biodiversity researchers not only in the Asia Pacific region but also across the entire globe The State of the World's Aquatic Genetic Resources for Food and Agriculture Food and Agriculture Organization of the United Nations, 2019-07-24 The conservation sustainable use and development of aquatic genetic resources AqGR is critical to the future supply of fish The State of the World's Aquatic Genetic Resources for Food and Agriculture is the first ever global assessment of these resources with the scope of this first Report being limited to cultured AqGR and their wild relatives within national jurisdiction The Report draws on 92 reports from FAO member countries and five specially commissioned thematic background studies The reporting countries are responsible for 96 percent of global aquaculture production The Report sets

the context with a review of the state of world's aquaculture and fisheries and includes overviews of the uses and exchanges of AqGR the drivers and trends impacting AqGR and the extent of ex situ and in situ conservation efforts The Report also investigates the roles of stakeholders in AqGR and the levels of activity in research education training and extension and reviews national policies and the levels of regional and international cooperation on AqGR Finally needs and challenges are assessed in the context of the findings from the data collected from the countries The Report represents a snapshot of the present status of AqGR and forms a valuable technical reference document particularly where it presents standardized key terminology and concepts

Pond Conservation in Europe Beat Oertli,Régis Céréghino,Jeremy Biggs,Steven Declerck,Andrew P. Hull,Maria Rosa Miracle,2010-09-24 Ponds are an exceptional freshwater resource around the world and represent thirty percent of the global surface area of standing water Furthermore the millions of ponds which exist exhibit a particularly high biodiversity and have a high potential for ecosystem functions and services Despite these impressive features ponds face many threats from a variety of human activities and receive little or no protection under European and national legislation Consequently there is an urgent need to protect consolidate and increase the pond resource in Europe In order to achieve these objectives the European Pond Conservation Network EPCN was launched 2004 in Geneva Its aim is to promote the awareness understanding and conservation of these small water bodies in the European landscape This volume of Developments in Hydrobiology presents a selection of 31 papers presented during EPCN conferences held in 2006 in France Toulouse and in 2008 in Spain Valencia They represent a diverse collection of themes from across the continent and North Africa and present new and original insights into topics as wide ranging as pond biodiversity human disturbance landscape ecology ecological assessment and monitoring practical management measures ecological restoration hydrology and climate change invasive species and threatened species

Hydrogeochemistry of Aquatic Ecosystems Sughosh Madhav,Virendra Bahadur Singh,Manoj Kumar,Sandeep Singh,2022-11-30 Hydrogeochemistry of Aquatic Ecosystems Discover the geological foundation of global water supply focusing on resource conservation and restoration Hydrogeochemistry explores the connections between the geology of a region and the chemical characteristics and quality of its water sources including such factors as erosion evaporation and increasingly man made activities With the emergence of climate change as a major factor reshaping water quality and availability the need to understand interactions between hydrochemistry and geology has never been greater Hydrogeochemistry of Aquatic Ecosystems meets this need by offering foundational knowledge about the hydrochemistry of different types of aquatic systems the nature of their interactions with various pollutants and geological processes and the possibilities and dangers of human intervention With a particular focus on aqueous resource conservation and restoration this is a vital timely guide to a potentially life saving subject Hydrogeochemistry of Aquatic Ecosystems readers will also find Detailed treatment of water sediment interactions arsenic and fluoride enrichment sand mining and many other subjects Coverage throughout of solute acquisition processes the
