*Food Protein Chemistry* Joe Regenstein, 2012-12-02 *Food Protein Chemistry* An Introduction for Food Scientists discusses food proteins and how they are studied Proteins are both biological entities and physicochemical compounds and they will be examined in both contexts in this volume The chemical and physical properties of proteins will be viewed from the perspective of chemists despite the fact that their use in the food supply emphasizes their biological nature Key topics discussed include proteins as essential to life amino acids protein classification selected proteins of the most important food systems and protein structure The book also includes chapters on protein measurement protein purification and spectral techniques for the study of proteins The book requires readers to have the equivalent of the Institute of Food Technologists requirements for undergraduate food science majors It also assumes a knowledge of math through calculus While primarily intended for senior and first year graduate food science students the text may also be useful to researchers in allied fields

**Biophysics** W. Hoppe,W. Lohmann,H. Markl,H. Ziegler,2012-12-06 What is biophysics As with all subjects which straddle traditional boundaries between fields it eludes a precise definition Furthermore it is impossible to do biophysics without having a certain foundation of knowledge in biology physics physical chemistry chemistry and biochemistry One approach to a biophysics textbook would be to refer the student to the literature of these neighboring fields and to leave the selection of the appropriate supplementary material up to the student The editors of this volume are of the opinion that it is more useful and less time consuming to present a selection of the supplementary knowledge in concentrated form together with the subject matter specific to biophysics The reader will thus find in this book introductions to such subjects as the structure and function of the cell the chemical structure of biogenic macromolecules and even theoretical chemistry What indeed is biophysics Must we consider it to include physiology electromedicine radiation medicine etc The field has evolved continuously in recent years Molecular understanding of life processes has come more and more to the fore Just as the field of molecular physics has developed to describe structures and processes in the realm of non living systems there has been a corresponding development of molecular biophysics *Characterization of Proteins* Felix Franks,2007-10-03 Proteins are the servants of life They occur in all component parts of living organisms and are staggering in their functional variety despite their chemical similarity Even the simplest single cell organism contains a thousand different proteins fulfilling a wide range of life supporting roles Their production is controlled by the cell's genetic machinery and a malfunction of even one protein in the cell will give rise to pathological symptoms Additions to the total number of known proteins are constantly being made on an increasing scale through the discovery of mutant strains or their production by genetic manipulation this latter technology has become known as protein engineering The in vivo functioning of proteins depends critically on the chemical structure of individual peptide chains but also on the detailed folding of the chains themselves and on their assembly into larger supramolecular structures The molecules and their functional assemblies possess a limited in vitro stability Special methods are required for their intact isolation from the source material and for their analysis both qualitatively and quantitatively Proteins are also increasingly used as industrial components e.g. in biosensors and immobilized enzymes because of their specificity selectivity and sensitivity This requires novel and refined processing methods by which the protein isolate can be converted into a form in which it can be utilized Food Proteins Shuryo Nakai,H.
