Protocols by Invariants Anneke A. Schoone, 1996-06-13 Algorithms are a set of rules that specify a sequence of actions to be taken to solve a problem Distributed algorithms which are designed to solve many problems at once are conceptually far more complex than algorithms in a single processing unit environment When the number of simultaneous events becomes large human minds cannot keep track of all of them Naturally it is necessary to know whether a distributed algorithm will have the desired effect In this book Dr Schoone discusses assertational verification by system wide invariants for use in verifying the behavior of distributed algorithms The approach is entirely pragmatic the author considers many different examples over a wide range of algorithms and protocols This volume will be an essential purchase for all those with an interest in distributed algorithms *Protocols, Strands, and Logic* Daniel Dougherty, José Meseguer, Sebastian Alexander Mödersheim, Paul Rowe, 2021-11-18 This Festschrift was published in honor of Joshua Guttman on the occasion of his 66 66 birthday The impact of his work is reflected in the 23 contributions enclosed in this volume Joshua s most influential and enduring contribution to the field has been the development of the strand space formalism for analyzing cryptographic protocols It is one of several symbolic approaches to security protocol analysis in which the underlying details of cryptographic primitives are abstracted away allowing a focus on potential flaws in the communication patterns between participants His attention to the underlying logic of strand spaces has also allowed him to merge domain specific reasoning about protocols with general purpose first order logical theories The identification of clear principles in a domain paves the way to automated reasoning and Joshua has been a leader in the development and distribution of several tools for security analysis *A Formal Approach to Hardware Design* Jørgen Staunstrup, 2012-12-06 A Formal Approach to Hardware Design discusses designing computations to be realised by application specific hardware It introduces a formal design approach based on a high level design language called Synchronized Transitions The models created using Synchronized Transitions enable the designer to perform different kinds of analysis and verification based on descriptions in a single language It is for example possible to use exactly the same design description both for mechanically supported verification and synthesis Synchronized Transitions is supported by a collection of public domain CAD tools These tools can be used with the book in presenting a course on the subject A Formal Approach to Hardware Design illustrates the benefits to be gained from adopting such techniques but it does so without assuming prior knowledge of formal design methods The book is thus not only an excellent reference it is also suitable for use by students and practitioners **Theorem Provers in Circuit Design** Ramayya Kumar, Thomas Kropf, 1995-03-06 This two volume set contains papers presented at the International Conference on Computational Engineering Science ICES 95 held in Mauna Lani Hawaii from 30 July to 3 August 1995 The contributions capture the state of the science in computational modeling and simulation in a variety of engineering disciplines civil mechanical aerospace materials and electronics engineering , *PROCEEDINGS OF THE 22ND CONFERENCE ON*

PROCEEDINGS OF THE 21ST CONFERENCE ON FORMAL METHODS IN COMPUTER-AIDED DESIGN - FMCAD 2021 Michael W. Whalen,Ruzica Piskac,2021-10-14 Our life is dominated by hardware a USB stick the processor in our laptops or the SIM card in our smart phone But who or what makes sure that these systems work stably safely and securely from the word go The computer with a little help from humans The overall name for this is CAD computer aided design and it s become hard to imagine our modern industrial world without it So how can we be sure that the hardware and computer systems we use are reliable By using formal methods these are techniques and tools to calculate whether a system description is in itself consistent or whether requirements have been developed and implemented correctly Or to put it another way they can be used to check the safety and security of hardware and software Just how this works in real life was also of interest at the annual conference on Formal Methods in Computer Aided Design FMCAD Under the direction of Ruzica Piskac and Michael Whalen the 21st Conference in October 2021 addressed the results of the latest research in the field of formal methods A volume of conference proceedings with over 30 articles covering a wide range of formal methods has now been published for this online conference starting

from the verification of hardware parallel and distributed systems as well as neuronal networks right through to machine learning and decision making procedures This volume provides a fascinating insight into revolutionary methods technologies theoretical results and tools for formal logic in computer systems and system developments **Proceedings of the 1995 International Conference on Parallel Processing** Prithviraj Banerjee,1995-08-08 This set of technical books contains all the information presented at the 1995 International Conference on Parallel Processing This conference held August 14 18 featured over 100 lectures from more than 300 contributors and included three panel sessions and three keynote addresses The international authorship includes experts from around the globe from Texas to Tokyo from Leiden to London Compiled by faculty at the University of Illinois and sponsored by Penn State University these Proceedings are a comprehensive look at all that s new in the field of parallel processing Deductive Verification of Object-oriented Software Benjamin Weiß,2014-08-18 Software systems play a central role in modern society and their correctness is often crucially important Formal specification and verification are promising approaches for ensuring correctness more rigorously than just by testing This work presents an approach for deductively verifying design by contract specifications of object oriented programs The approach is based on dynamic logic and addresses the challenges of modularity and automation using dynamic frames and predicate abstraction
