Modeling and Using Context Varol Akman, Paolo Bouquet, Richmond Thomason, Roger A. Young, 2003-06-30 Context has emerged as a central concept in a variety of contemporary approaches to reasoning The conference at which the papers in this volume were presented was the third international interdisciplinary conference on the topic of context and was held in Dundee Scotland on July 27-30 2001 The first conference in this series was held in Rio de Janeiro in 1997 and the second in Trento in 1999 Like the previous conferences CONTEXT 2001 was remarkably successful in bringing together representatives of many different fields spanning the entire range of the cognitive and informational sciences and with interests ranging from specific commercial applications to highly general philosophical and logical theories The papers collected here demonstrate well the range of context related research While foundational problems remain and continue to be discussed in many of the contributions collected in this volume the work shows increased sophistication about what forms of reasoning are important and what techniques are appropriate in accounting for them The papers themselves however do not convey the lively excitement of the conference itself and the continuing spirit of cooperation and communication across disciplines that has been the hallmark of these conferences We are very pleased that the field of context research has shown over four years intense sustained development while retaining this sense of interdisciplinary cooperation
