

# GESTALT LAW OF PROXIMITY

The law of proximity states that individual elements that are placed close to each other are perceived as belonging together.

## ILLUSTRATION

The image below demonstrates grouping based on proximity.

So, when looking at the image above, we see the dots on the left as belonging to one group, and the dots on the right as belonging to a separate group.

## EXAMPLES

- Stars clustered together are seen as a formation in the sky, leading to their interpretation as star signs in astrology.
- Putting a blank space between paragraphs in a report or academic paper helps the reader understand that the next set of sentences will present a new idea.

## **Proximity Theory:**

Theories of Communication Networks Peter R. Monge, Noshir S. Contractor, 2003 In this text the authors develop a multitheoretical model that relates different social science theories with different network properties This model is multilevel providing a network decomposition that applies the various social theories to all network levels *Handbook of Social Psychology* John DeLamater, 2006-11-24 Psychology focusing on processes that occur inside the individual and Sociology focusing on social collectives and social institutions come together in Social Psychology to explore the interface between the two fields The core concerns of social psychology include the impact of one individual on another the impact of a group on its individual members the impact of individuals on the groups in which they participate the impact of one group on another This book is a successor to Social Psychology Social Perspectives and Sociological Perspectives in Social Psychology The current text expands on previous handbooks in social psychology by including recent developments in theory and research and comprehensive coverage of significant theoretical perspectives Entrepreneurial Ecosystems Sophie Boutillier, Denis Carré, Nadine Levratto, 2016-05-09 In today's rapidly changing business landscape entrepreneurship is growing and actively promoted by policy makers Several reports explore the influence of entrepreneurship on the economy and put some emphasis on its positive influence GDP per capita unemployment and exports However entrepreneurship does not go per se and it is now broadly admitted that the decision of the entrepreneur is narrowly connected with its environment the so called entrepreneurial ecosystem This book shows why policymakers entrepreneurship supporters and entrepreneurs themselves should keep in mind the locally structured nature of entrepreneurial networks Even if the notion of Entrepreneurial Ecosystem has become quite popular among the international organization development agencies and public administrations this concept is often considered as a new one having its origins in very recent publications This book aims at showing that entrepreneurial ecosystems have their roots in the history of economic thought and that scholars have long been conscious of their importance Instead of insisting upon the diversity of agents involved in these organizations it also puts some emphasis on the importance of the linkages and sharing between them and suggests some orientations in view of a performing evaluation system *Theories of Consciousness* William Seager, 2002-01-31 The most remarkable fact about the universe is that certain parts of it are conscious Somehow nature has managed to pull the rabbit of experience out of a hat made of mere matter Making its own contribution to the current lively debate about the nature of consciousness *Theories of Consciousness* introduces variety of approaches to consciousness and explores to what extent scientific understanding of consciousness is possible Including discussion of key figures such as Descartes Fodor Dennett and Chalmers the book covers identity theories representational theories intentionality externalism and the new information based theories **Political Science Research Methods** Janet Buttolph Johnson, H. **Sharing Territories** Cara Nine,2022-03-24 In *Sharing Territories* Cara Nine defends a river model of territorial rights On a river model groups are assumed to be interdependent and overlapping If we imagine human settlements and territorial rights as established in river catchment areas not on lands with walls and borders the primary features of group life are not independence and distinctness Drawing on natural law philosophy Nine s theory argues for the establishment of foundational territories around geographical areas like rivers Usually lower scale political entities foundational territories overlap with and serve as the grounding blocks of larger territorial units Examples of foundational territories include not only river catchment areas but also urban areas drawn around individuals who hold obligations to collectively manage their surroundings Foundational territorial authorities manage spatially integrated areas where agents are interconnected by dense and scaffolded physical circumstances In these areas individuals cannot fulfil their natural obligations to each other without the help of collective rules As foundational territories overlap the territories of other political units Nine frames a theory of nested and shared

territorial rights and argues for insightful changes to the allocation of resource rights between political groups and individuals
