## **Pseudocereals And Less Common Cereals Grain Properties And Utilization Potential:**

Pseudocereals and Less Common Cereals Peter S. Belton, John R.N. Taylor, 2013-03-14 Today at the beginning of the third millennium just three cereal grains wheat rice and maize dominate the world's food supply accounting for some 75 % of all grains produced This food oligoculture poses some risks for the future of humankind The risk of catastrophic food crop failure through insect pests or fungal diseases is ever greater as genetic diversity is reduced The introduction of genetically modified cereals may exacerbate this situation as different species will share the same genes conferring resistance to pests The intensive cultivation practices needed to produce the required high yields of these highly developed cereals the so called Green Revolution is leading to environmental degradation through denudation of the soil and pollution of the environment due to pesticide and fertilizer runoff In addition the undoubted benefits brought about for many by the Green Revolution with its use of intensive agricultural practices cannot be shared by all Such cultivation practices are often inappropriate in the developing world where farmers simply do not have the income to purchase the required agricultural machinery inorganic fertilizers and pesticides Also the environmental conditions in much of the developing world characterised by frequent droughts interspersed with short periods of very high rainfall are especially damaging to the large areas of unprotected soil which result from mechanised agriculture Reliance on so few different grains for our nutrition also appears to be detrimental to our long term health

Millet and Pseudo Cereals Mohar Singh, Salej Sood, 2020-09-20 Millets and Pseudo Cereals is the first comprehensive resource to focus on the potential crop improvements through genetic enhancements The choice of food crop for a region is primarily determined by the conditions of climate and soil Once labelled as orphan crops millets and pseudo cereals are now known as miracle grains due to their adaptation to harsh conditions and high nutritional quality Small millets and pseudo cereals are now seen to occupy special niches through their ability to adapt to challenging conditions These crops have a comparative advantage in marginal lands where they withstand stress conditions and contribute to sustainable production They also contribute to the diversity richness and production stability of agro ecosystems Millets include sorghum pearl millet finger millet foxtail millet proso millet barnyard millet little millet and kodo millet while the other group which are not cereals but consumed as cereals and generally referred as pseudo cereals comprises of grain amaranths buckwheat and chenopods Millets and Pseudo Cereals presents current information on the genetic architecture of important economic traits and the genomic resources for gene enabled breeding This compilation contains information on the global status available germplasm resources nutritional value breeding advancements genomics applications and sustainability of agriculture through millets and pseudo cereals cultivation This book is a valuable resource for those conducting research and exploring new areas for advancing crop genetic understanding Explores the current challenges of pseudo cereal production and how that can be overcome by developing genetic and breeding resources using appropriate germplasm Provides holistic information on millets and pseudo cereals Features global perspectives from an

makers      **Sourdough Microbiota and Starter Cultures for Industry** Elaine Berger Ceresino, Grazina Juodeikiene, Susanne Miescher Schwenninger, João Miguel Ferreira da Rocha, 2024-04-16 Traditional sourdough bread refers to spontaneous fermentation of cereals by lactic acid bacteria and yeasts leading to natural selections of microorganisms. The metabolic activity of these microorganisms promotes the formation of organic acids, flavor development and leavening in food matrices which most know as sourdough bread. This bread is still widely manufactured at farm level across Europe and worldwide being highly appreciated by consumers for its distinct flavor, texture, healthy attributes and natural origin. Sourdough bread is expected to grow 6.9% annually through 2023. Once stagnant, the bread market has experienced a revival specifically through sourdough bread consumption. Consumers have been avoiding bread in the recent years due to the presence of extra ingredients such as chemical dough conditioners, preservatives and added sugar. However, the increasing popularity of fermented foods and their multiple health benefits are prompting the growth of sourdough market. This fast growing market has been demanding a dynamic response from industries producing starter cultures to accelerate sourdough fermented bread production in increasing quantities while keeping its made-for-you characteristics. By bringing together top sourdough experts in Europe and beyond, this book compiles the latest knowledge in all areas of sourdough starter culture and advantages in using sourdough fermentation. **Sourdough Microbiota and Starter Cultures for Industry** supplies a biosciences audience with a hands-on view of the latest advances from sourdough microbiota characterization to starter culture potentials targeting industrial application including specific techno-functional and safety improvements obtained by clean labeling strategies. Insights on health and improved quality shed light on new shifting consumer preferences and why choosing sourdough fermentation is a great expansion opportunity in one's portfolio as the science behind sourdough starter cultures meets improved nutrition impact opportunities. This text teaches methods to exploit sourdough technology through the entire value chain from sourdough natural microflora through the development of novel starter cultures for producing fermented food, introducing the advantages that sourdough fermentation offers for improving the sensorial, technological and nutritional properties of breads.

Yu,Rong Tsao,Fereidoon Shahidi,2012-01-30 Cereal and pulse crops are staple foods that provide essential nutrients to many populations of the world Traditionally whole grains were consumed but most current foods are derived from refined fractions of cereal and pulse crops Consumption of processed or refined products may reduce the health benefits of food In wheat based processed foods for example the removed 40% of the grain mainly the bran and the germ of the wheat grain contains the majority of the health beneficial components These components particularly non essential phytochemicals such as carotenoids polyphenols phytosterols stanols and dietary fibers have been shown to reduce the risk of major chronic diseases of humans such as cancer cardiovascular diseases and Parkinson s disease Such bioactives are therefore good candidates for ingredients of nutraceuticals and functional foods There are many factors that can affect the bioactive content of cereal and pulse based food ingredients including genetics growing and storage conditions post harvest treatments food formulation and processing All of these factors ultimately affect human health and wellness Bioavailability is also important for these compounds for exerting their protective roles Cereals and Pulses Nutraceutical Properties and Health Benefits provides a summary of current research findings related to phytochemical composition and properties of cereal and pulse crops The nutraceutical properties of each major cereal and pulse are discussed Coverage of cereals and pulse crops includes barley oats rice rye corn adlay wheat buckwheat psyllium sorghum millet common beans field peas faba beans chickpea lentil and soybeans

Chapters for each crop discuss methods to improve crop utilization nutraceutical components and properties bioactive compositions antioxidant properties beneficial health effects disease prevention activities and areas for future research Also included are two chapters that examine the beneficial health properties of dietary fibers and antioxidants Edited and written by an international team of respected researchers this book is a reference guide for scientists working in food ingredients food product research and development functional foods and nutraceuticals crop breeding and genetics human nutrition post harvest treatment and processing of cereal grains and pulses It will enable them to effect value added food innovation for health promotion and disease risk reduction
