## **Pseudoscience In Biological Psychiatry Blaming The Body:**

*Pseudoscience in Biological Psychiatry* Colin A. Ross, Alvin Pam, 1995 Lately it seems that not a day passes without the media proclaiming yet another sensational breakthrough in the search for the physical origins of mental illness But beyond all the fanfare and media hype is there a single shred of hard empirical evidence to substantiate the existence of a gene for alcoholism or the brain chemistry behind schizophrenia More to the point in fact is it scientifically sound to limit the search for the roots of mental illness to processes occurring within the body while dismissing socioeconomic familial and experiential influences as at best mere triggering mechanisms And if not what harm is being done by psychiatry's current obsession with these somatic chimeras This groundbreaking book offers answers to those questions and more While Dr Ross and Professor Pam clearly assert from the outset that biological psychiatry is dominated by a reductionist ideology which distorts and misrepresents much of its research this is by no means a raw polemic voiced by an overzealous opposition Instead it is a reasoned discourse based on a clear sighted and methodical examination of the professional literature Contributors to this volume include distinguished researchers and clinicians from the fields of psychiatry psychology sociology and psychopharmacology Their common purpose in coming together was to alert the mental health community to the ideological blind spots and conceptual errors in the basic logic and methodology of biological psychiatry to demonstrate the need for a more scientifically based psychiatric practice and to suggest alternative approaches to understanding and treating mental illness Readers will find their arguments stimulating provocative and highly persuasive Among the cutting edge issues they explore are the historical origins of biological psychiatry genetics and mental illness the current state of psychiatric training psychopharmacology and drug therapy the public health legal and ethical implications of biological psychiatry and the funding power and politics of research This book is essential reading for all mental health professionals It also has many important things to say to health care administrators political analysts and public policy makers Of related interest *INSANITY The Idea and Its Consequences* Thomas Szasz In this provocative book Dr Thomas Szasz one of the most celebrated and controversial psychiatric thinkers of our time presents a carefully crafted systematic analysis of the precise character and practical consequences of the idea of mental illness His findings and opinions have captured the attention of organized psychiatry and given everyone concerned with the human condition a better understanding of this almost universally misunderstood disease 1990 0 471 52534 0 432 pp *CRUEL COMPASSION Psychiatric Control of Society's Unwanted* Thomas Szasz *Cruel Compassion* is the capstone of Thomas Szasz's critique of psychiatric practices Reexamining psychiatric interventions from a cultural historical and political economic perspective Szasz demonstrates that the main problem that faces mental health policymakers today is adult dependency He gives us a sobering look at some of our most cherished notions about our humane treatment of society's unwanted and about ourselves as a compassionate and democratic people 1994 0 471 01012 X 260 pp **Blaming the Brain** Elliot Valenstein, 2002-02 In *Blaming the Brain* Elliott

Valenstein exposes the many weaknesses inherent in the scientific arguments supporting the widely accepted theory that biochemical imbalances are the main cause of mental illness. He lays bare the commercial motives of drug companies and their huge stake in expanding their markets. This provocative book will force patients, practitioners and prescribers alike to rethink the causes of mental illness and the methods by which we treat it.

**Pseudoscience** Allison B. Kaufman, James C. Kaufman, 2019-03-12 Case studies, personal accounts and analysis show how to recognize and combat pseudoscience in a post truth world. In a post truth, fake news world, we are particularly susceptible to the claims of pseudoscience. When emotions and opinions are more widely disseminated than scientific findings and self-proclaimed experts get their expertise from Google, how can the average person distinguish real science from fake? This book examines pseudoscience from a variety of perspectives through case studies, analysis and personal accounts that show how to recognize pseudoscience, why it is so widely accepted and how to advocate for real science. Contributors examine the basics of pseudoscience, including issues of cognitive bias, the costs of pseudoscience, with accounts of naturopathy and logical fallacies in the anti-vaccination movement, perceptions of scientific soundness, the mainstream presence of integrative medicine, hypnosis and parapsychology, and the use of case studies and new media in science advocacy. Contributors: David Ball, Paul Joseph Barnett, Jeffrey Beall, Mark Benisz, Fernando Blanco, Ron Dumont, Stacy Ellenberg, Kevin M. Foltz, Christopher French, Ashwin Gautam, Dennis M. Gorman, David H. **Blinded by Science** Wastell, David, White, Susan, 2017-03-15 There's no hotter area of science at least as far as the general media and laypeople are concerned than neuroscience. Every day we hear of dramatic, surprising discoveries that seem to have the potential to utterly change our understanding of how the mind works. This book offers the first thorough review of such claims and the new biological science behind them. It examines the actual and potential applications of neuroscience within social policy and the impact of neuroscientific discoveries on long-standing moral debates and professional practices throughout social work, mental health practice and criminal justice.

**A Complex Exile** Erin Dej, 2020-11-15 Over 235,000 people couch surf, stay in emergency shelters or live on the street in Canada every year. But lack of housing security is just one barrier faced by people who are homeless. As *A Complex Exile* shows, the homelessness sector inadvertently reinforces social exclusion as well. The very policies, practices and funding models that exist to house the homeless promote social inclusion and provide mental health care form a homelessness industrial complex. These practices emphasize personal responsibility and individualized responses that ultimately serve to exclude people in subtle and not so subtle ways. Erin Dej demonstrates that the causes of and responses to homelessness have become largely medicalized, limiting discussion on structural and systemic drivers such as income inequality, discrimination and housing affordability. A

Complex Exile goes beyond bio medical and psychological perspectives on homelessness mental illness and addiction to call for a transformation in how we respond to homelessness in Canada      **Critical Health Psychology** Michael

**Beyond the Disease Model of Mental Disorders** Donald Kiesler, 1999-03-30 Kiesler's *Beyond the Disease Model of Mental Disorder* goes beyond recent volumes which argue that psychotropic medications are being overused and abused in contemporary mental health settings Elliott Valenstein for example an emeritus professor of psychology and neuroscience at the University of Michigan recently argues that people should be highly suspicious of the claim that all mental illness is primarily a biochemical disorder In his 1998 book *Blaming the Brain: The Truth about Drugs and Mental Health* Valenstein does not argue that drugs never work or that patients should discontinue taking medication Valenstein's central point instead is that drugs do not attack the real cause of a disorder since biochemical theories are an unproven hypothesis and probably a false one Inasmuch as Kiesler's volume is concerned exclusively with scientific explanations of mental disorders it does not review at all the evidence for psychotropic medications or for other treatments of mental disorders Kiesler does highlight a message similar to that of Valenstein who rejects the hypothesis that mental illness is primarily a biochemical disorder After a comprehensive review of the relevant scientific evidence Kiesler concludes that henceforth the study of mental disorders must be guided by multicausal theories and research that systematically include an array of biological psychological and sociocultural causal factors Kiesler adds that in order for this to be accomplished the mental health field and the public at large must first abandon the invalid monocausal biomedical disease model of mental disorder

**A Spiritual Hypothesis** Daniel Punzak, 2017-04-06 Traditional Western religion explains that each human has a spiritual aspect called a soul However several passages in the Bible allude to humans having a soul and a spirit Dan has explored this idea and found numerous modern psychological findings that support this notion Shamanism and some Eastern religious concepts also support this idea Diverse concepts such as creativity and mental illness can be explained by the idea that two spiritual forms are in each human

*Beyond Boundaries of Biomedicine*, 2003-01-01 Cultural forces shape much of medicine including psychiatry and medicine shapes much of our culture Medicine provides us with beneficial treatments of disease but it also causes harm increasingly so in the form of overmedication enhanced by the pharmaceutical industry The book explores boundaries of

medicine and psychiatry in a cultural setting by building bridges between unconnected literatures Boundaries have to be redrawn since effects of the environment biological social and political on health and disease are undervalued Potential beneficial effects of diet therapies are a recurrent theme throughout the text with particular emphasis on omega 3 fatty acids Deficiencies of these acids in common diets may contribute to many chronic diseases and psychiatric disorders The book uncovers limitations of evidence based medicine which fosters a restrictive view of health and disease Case studies include the biology of migraine limitations of biological psychiatry conventional versus alternative medicine science religion and near death experiences
