The Psychology of Strength and Conditioning David Tod, David Lavallee, 2013-03-01. An effective strength and conditioning program underpins the training regime of every successful athlete or sportsperson and it is now widely recognized that psychology plays a significant role in the application of strength and conditioning principles. This is the first book to examine the importance of psychological factors in strength and conditioning and to offer a comprehensive overview of current research theory and best practice. Written by a team of leading international researchers and practitioners, the book looks at how psychology influences training and performance and how training can influence an individual's psychological well-being. It explores a range of key topics in contemporary sport psychology and athletic training including mental skills training, behaviour change, psychology in professional practice, psychological problems including exercise dependence, eating disorders and steroid use. Throughout the book combines evidence-based research with discussion of the practical issues facing athletes, coaches and sport science professionals. By firstly developing our understanding of the latest psychological skills and techniques used by athletes and coaches to maximize strength and conditioning training and performance and then the ways other psychological factors influence and are influenced by strength and conditioning training, this book represents invaluable reading for all advanced students, researchers, trainers and sport scientists with an interest in strength and conditioning or sport psychology.

The first volume of its kind, this provocative book evaluates the construct of cultural competence from multiple perspectives. At the intersection of diverse disciplines and domains, contributors argue for greater clarity in understanding the cultural competence construct, a deeper level of analysis as to its multifaceted components, and call for concrete practical objectives and science-based means of measurement. Serious nuanced discussion addresses challenges, strengths and limitations of current cultural competence practice in terms of sociocultural concepts, e.g. race, ethnicity, and practical concepts, e.g. sensitivity in the therapeutic relationship, treatment efficacy. In addition, contributors

identify future directions for research training and practice with the potential to spur the further evolution of this clinically important construct This timely book Critiques the cultural competence construct and its evaluation as it is currently disseminated within applied psychology Compares and contrasts how cultural competence is defined within clinical school and counseling psychology Analyzes difficulties and challenges in understanding the cultural competence construct as evaluated through the lens of closely related fields outside of applied psychology Spotlights complexities in cultural competence issues pertaining to specific populations Sets out implications for education and training offering a detailed outline for an ideal college course in cultural competence With this level of reasoning and rigor Cultural Competence in Applied Psychology is sure to stimulate long overdue dialogue and debate among professionals across a wide variety of fields such as clinical psychology social work child and social psychology psychotherapy school psychology and counseling
