## **Rebuilding Europe:**

Rebuilding Europe David W. Ellwood, 2014-02-04 With the end of the Cold War and the prospect of a federal Europe ever closer this book is a timely reassessment of the processes by which western Europe was reborn out of the devastation and despair of 1945 Concentrating on the first postwar decade and making rich use of the latest research findings David Ellwood gives a detailed account of the practicalities of reconstruction how it was done what it cost who paid for it and what those involved hoped for expected and actually received

**Rebuilding Europe** Ruth Rouse, World's Student Christian Federation, 1925

**Rebuilding Europe's Bombed Cities** Jeffrey M. Diefendorf, 2015-12-30 An exploration of Europe's urban reconstruction after World War II this volume contains 12 essays based on new research which examine the significant architectural continuities in pre war and post war building They highlight the unusual character of rebuilding in several case studies

*American Hegemony and the Postwar Reconstruction of Science in Europe* John Krige, 2008-08-29 In 1945 the United States was not only the strongest economic and military power in the world it was also the world's leader in science and technology In *American Hegemony and the Postwar Reconstruction of Science in Europe* John Krige describes the efforts of influential figures in the United States to model postwar scientific practices and institutions in Western Europe on those in America They mobilized political and financial support to promote not just America's scientific and technological agendas in Western Europe but its Cold War political and ideological agendas as well Drawing on the work of diplomatic and cultural historians Krige argues that this attempt at scientific dominance by the United States can be seen as a form of consensual hegemony involving the collaboration of influential local elites who shared American values He uses this notion to analyze a series of case studies that describe how the U S administration senior officers in the Rockefeller and Ford Foundations the NATO Science Committee and influential members of the scientific establishment notably Isidor I Rabi of Columbia University and Vannevar Bush of MIT tried to Americanize scientific practices in such fields as physics molecular biology and operations research He details U S support for institutions including CERN the Niels Bohr Institute the French CNRS and its laboratories at Gif near Paris and the never established European MIT Krige's study shows how consensual hegemony in science not only served the interests of postwar European reconstruction but became another way of maintaining American leadership and making the world safe for democracy

*The United States and European Reconstruction 1945-1960* John Killick, 2014-06-11 In this book John Killick introduces the reader to a key aspect of economic history the impact of American economic intervention in Europe after World War II The effects of this impact are still open to debate The Marshall Plan has traditionally been seen as a decisive turning point in European economic and political history but its effect is now being called into question Would Europe have revived spontaneously after 1945 Did American dollars save the world in 1947 Was American influence the underlying reason for the general drift away from socialism and the move towards European federalism in the late 1940s and early 1950s If the Marshall Plan in conjunction with NATO created a coherent and

prosperous western bloc was this critical for the outcome of the Cold War These are important questions to which this careful analysis provides some new and accessible answers

The Marshall Plan Nova Ashford, After the end of World War II Europe was left in a state of devastation Cities infrastructure and industries lay in ruins and the economies of many European nations were crippled The war had drained resources and the continent faced widespread poverty unemployment and hunger The immediate aftermath was marked by the destruction of agricultural systems a lack of essential goods and the breakdown of trade networks Millions of people had lost their homes their livelihoods and their sense of stability The scale of the devastation created a monumental challenge for European nations as they struggled to rebuild and recover In addition to the physical destruction there was a profound psychological impact Many citizens were deeply disillusioned with their governments and institutions leading to political instability in several countries Rising unemployment inflation and a lack of basic resources created fertile ground for extremist ideologies particularly communism to gain traction The fear of a potential Soviet expansion into Western Europe was another driving force behind the need for reconstruction The Soviet Union had already established control over Eastern Europe and there was a growing sense of urgency to rebuild Europe s economies to prevent the spread of communism and maintain stability The United States which had emerged from the war as a global superpower recognized that the fate of Europe was closely tied to its own security The U S feared that economic instability in Europe would lead to political upheaval making it vulnerable to Soviet influence As part of a broader strategy to contain the spread of communism the U S decided to step in and offer assistance to Western Europe This would not only help rebuild the region but also ensure that the newly rebuilt countries would align more closely with democratic and capitalist ideals

**The Shock of America** David Ellwood, 2012-07-19 The Shock of America is based on the proposition that whenever Europeans of the last 100 years or more contemplated those margins of their experience where change occurred there sooner or later they would find America How Europeans have come to terms over the decades with this dynamic force in their midst and what these terms were is the story at the heart of this text Masses of Europeans have been enthralled by the real or imaginary prospects coming out of the USA Important minorities were at times deeply upset by them Sometime the roles were reversed or shaken up But nobody could be indifferent for long Inspiration provocation myth menace model all these categories and many more have been deployed to try to cope with the Americans Attitudes and stereotypes have emerged intellectual resources have been mobilised positions and policies developed all trying to explain and deal with the kind of radiant modernity America built over the course of the twentieth century David Ellwood combines political economic and cultural themes suggesting that American mass culture has provided the United States with a uniquely effective link between power and influence over time The book is structured in three parts a separation based on the proposition that America s influence as an unavoidable force for or against innovation was visible most conspicuously after Europe s three greatest military political conflicts of the contemporary era the Great War World War II and the Cold War It concludes with

the emotional upsurge in Europe which greeted the arrival of Obama on the world scene suggesting that in spite of all the disappointments and frictions of the years the US still retained its privileged place as a source of inspiration for the future across the Western world

[The Greening of London, 1920–2000](#) Matti O. Hannikainen,2017-05-15 The long term development of public green spaces such as parks public gardens and recreation grounds in London during the twentieth century is a curiously neglected subject despite the fact that various kinds of green spaces cover huge areas in cities in the UK today This book explores how and why public green spaces have been created and used in London and what actors have been involved in their evolution during the course of the twentieth century Building on case studies of the contemporary boroughs of Camden and Southwark and making use of a wealth of archival material the author takes us through the planning and creation stages to the intended and actual uses and ongoing management of the spaces By highlighting the rise and fall of municipal authorities and the impact of neo liberalism after the 1970s the book also deepens our understanding of how London has been governed planned and ruled during the twentieth century It makes a crucial contribution to academic as well as political discourse on the history and present role of green space in sustainable cities
