Liebling,Denis Naddef,George L. Nemhauser,William R. Pulleyblank,Gerhard Reinelt,Giovanni Rinaldi,Laurence A. Wolsey,2009-11-06 In 1958 Ralph E Gomory transformed the field of integer programming when he published a paper that described a cutting plane algorithm for pure integer programs and announced that the method could be refined to give a finite algorithm for integer programming In 2008 to commemorate the anniversary of this seminal paper a special workshop celebrating fifty years of integer programming was held in Aussois France as part of the 12th Combinatorial Optimization Workshop It contains reprints of key historical articles and written versions of survey lectures on six of the hottest topics in the field by distinguished members of the integer programming community Useful for anyone in mathematics computer science and operations research this book exposes mathematical optimization specifically integer programming and combinatorial optimization to a broad audience **Encyclopedia of Computer Science and Technology** Jack Belzer,Albert G. The idea of a refereed conference for the mathematical programming community was proposed by Ravi Kannan and William Pulleyblank to the Mathematical Programming Society MPS in the late 1980s. Thus IPCO was born and MPS has sponsored the conference as one of its main events since IPCO I at the University of Waterloo in 1990. The conference has become the main forum for recent results in Integer Programming and Combinatorial Optimization in the non Symposium years. This volume compiles the papers presented at IPCO XIV held June 9-11, 2010 at EPFL in Lausanne. The scope of papers considered for IPCO XIV is likely broader than at IPCO I. This is sometimes due to the wealth of new questions and directions brought from related areas. It can also be due to the successful application of math programming techniques to models not traditionally considered. In any case, the interest in IPCO is greater than ever and this is reflected in both the number (135) and quality of the submissions. The Programme Committee with 13 members was also IPCO's largest. We thank the members of the committee as well as their sub-reviewers for their exceptional and time-consuming work and especially during the online committee meeting held over January. The process resulted in the selection of 34 excellent research papers which were presented in non-parallel sessions over three days in Lausanne. Unavoidably, this has meant that many excellent submissions were not able to be included.

The editors and authors dedicate this book to Bernhard Korte on the occasion of his seventieth birthday. We, the editors, are happy about the overwhelming feedback to our initiative to honor him with this book and with a workshop in Bonn on

November 3 7 2008 Although this would be a reason to look back we would rather like to look forward and see what are the interesting research directions today This book is written by leading experts in combinatorial optimization All papers were carefully reviewed and eventually twenty three of the invited papers were accepted for this book The breadth of topics is typical for the field combinatorial optimization builds bridges between areas like combinatorics and graph theory submodular functions and matroids network flows and connectivity approximation algorithms and mathematical programming computational geometry and polyhedral combinatorics All these topics are related and they are all addressed in this book Combinatorial optimization is also known for its numerous applications To limit the scope however this book is not primarily about applications although some are mentioned at various places Most papers in this volume are surveys that provide an excellent overview of an active research area but this book also contains many new results Highlighting many of the currently most interesting research directions in combinatorial optimization we hope that this book constitutes a good basis for future research in these areas

RECENT ADVANCES IN MATHEMATICAL PROGRAMMING R. L. GRAVES, PH. WOLFE, 1963

Algorithmic Principles of Mathematical Programming Ulrich Faigle, W. Kern, G. Still, 2013-04-17 Algorithmic Principles of Mathematical Programming investigates the mathematical structures and principles underlying the design of efficient algorithms for optimization problems Recent advances in algorithmic theory have shown that the traditionally separate areas of discrete optimization linear programming and nonlinear optimization are closely linked This book offers a comprehensive introduction to the whole subject and leads the reader to the frontiers of current research The prerequisites to use the book are very elementary All the tools from numerical linear algebra and calculus are fully reviewed and developed Rather than attempting to be encyclopedic the book illustrates the important basic techniques with typical problems The focus is on efficient algorithms with respect to practical usefulness Algorithmic complexity theory is presented with the goal of helping the reader understand the concepts without having to become a theoretical specialist Further theory is outlined and supplemented with pointers to the relevant literature

Discrete Optimization R. Gary Parker, Ronald L.

Rardin, 2014-06-28 This book treats the fundamental issues and algorithmic strategies emerging as the core of the discipline of discrete optimization in a comprehensive and rigorous fashion Following an introductory chapter on computational complexity the basic algorithmic results for the two major models of polynomial algorithms are introduced models using matroids and linear programming Further chapters treat the major non polynomial algorithms branch and bound and cutting planes The text concludes with a chapter on heuristic algorithms Several appendixes are included which review the fundamental ideas of linear programming graph theory and combinatorics prerequisites for readers of the text Numerous exercises are included at the end of each chapter
