Handbook of Food Processing Equipment George Saravacos, Athanasios E. Kostaropoulos, 2015-12-29 This text covers the design of food processing equipment based on key unit operations such as heating cooling and drying In addition mechanical processing operations such as separations transport storage and packaging of food materials as well as an introduction to food processes and food processing plants are discussed Handbook of Food Processing Equipment is an essential reference for food engineers and food technologists working in the food process industries as well as for designers of process plants The book also serves as a basic reference for food process engineering students The chapters cover engineering and economic issues for all important steps in food processing This research is based on the physical properties of food the analytical expressions of transport phenomena and the description of typical equipment used in food processing Illustrations that explain the structure and operation of industrial food processing equipment are presented style font size 13 3333330154419px The materials of construction and fabrication of food processing equipment are covered here as well as the selection of the appropriate equipment for various food processing operations Mechanical processing equipment such as size reduction size enlargement homogenization and mixing are discussed Mechanical separations equipment such as filters centrifuges presses and solids air systems plus equipment for industrial food processing such as heat transfer evaporation dehydration refrigeration freezing thermal processing and dehydration are presented Equipment for novel food processes such as high pressure processing are discussed The appendices include conversion of units selected thermophysical properties plant utilities and an extensive list of manufacturers and suppliers of food equipment Integrated Power And Desalination Plants Asghar. Husain, 2003-10-15 Application of advanced computer oriented techniques are necessary in the synthesis design analysis and operation of a complex integrated plant to produce power and freshwater by desalting seawater or brackish water at higher efficiency and lower cost These are the two vital commodities to maintain sustainability of life particularly in the arid regions where natural freshwater supply is either totally lacking or has become scarce Even in the regions with polluted water resources such a system is required to support life At the same time the available energy should be put to maximum use and life cycle analysis is essential to ensure sustainability of the systems The contributors of this book experts in their own respective fields outline the various techniques enriched by their experience The contents of the book would therefore be of great interest not only to designers and operators of dual purpose power desalination plants but also to educators and researchers as well serve as a valuable source of information to those engaged in other areas of processing industry The book is motivated by the growing importance of integrated power and desalination plants in general and in their respective regions in particular and the long felt need for an authoritative book on the subject After a long gap of more than two decades following the publication of Principles of Desalination Spiegler and Laird in 1980 this book would be a welcome addition to the literature in the field to serve as a valuable guide and reference to all those

who are concerned with the integration of power and desalination plants It will also serve as a valuable source of information to those in the processing industry in general

Tools and Methods for Pollution Prevention Subhas K. Sikdar, Urmila Diwekar, 2013-11-11 Difficult ethical and political issues confront the application of scientific and technological solutions for preventing pollution from occurring Often the questions embodying proposed solutions to known problems are ambiguous and no singular solution can exist for all locations Yet the common organizing principle for all solutions to environmental problems must be scientific because only sound science can provide a rational understanding that decision makers can use universally The NATO Advanced Research Workshop ARW on Tools and Methods for Pollution Prevention October 12 14 1998 Prague Czech Republic was designed to assemble experts from NATO and former socialist countries of Eastern Europe to discuss science based tools and methods either available or in development that can be used to analyze environmental impacts of manufacturing processes and manufactured products The presentations at the workshop were written up specifically for the purpose of this book albeit after peer reviews and thorough revisions Most of the chapters focus on specific method development for designing environmentally benign processes or products Several chapters take a broader view and focus on such designs from an implementation perspective and dwell on ethical conflicts resistance to change because of inertia or inadequate infrastructure and on the lack of resources We placed these chapters at the beginning of the book The volume starts with the overview by Sikdar et al who describe the scope and difficulties of pollution prevention in the manufacturing sectors
