Recent Trends In Mortality Analysis Studies In Population:

The Life Table Guillaume Wunsch, Michel Mouchart, Josianne Duchêne, 2013-03-09 Guillaume Wunsch Michel Mouchart Josianne Duchene This book is an outcome of the activities of the Working Group on Health Morbidity and Mortality Differentials of the European Association for Population Studies which was chaired for some years by one of the present editors G Wunsch In collaboration with the Institute of Statistics and the Institute of Demography of the University of Louvain this Working Group held a workshop in Louvain la Neuve a few years ago on the use of life tables in Europe taking into account problems of data collection methods and models Some of the participants in the workshop were then invited by the present editors to improve develop or in some cases thoroughly modify their papers in order to transform them into chapters of a book on life tables Though life tables are one of the oldest tools in demography and every textbook on demographic methods deals with the topic of life table construction few books have dealt with the subject in depth It is the hope of the editors that the present volume will fulfill to some extent this need Though primarily written by and for demographers this book will also be of use to actuaries working in life insurance and to epidemiologists dealing with morbidity and cause of death Furthermore a topic such as competing risks theory should also be of interest to statisticians

Formal Demography David P. Smith, 2013-11-11 This book is intended as a relatively nontechnical introduction to current demographic methods It has been several years in preparation beginning from occasional class handouts I wrote to elaborate on essential points of demographic methodology Its growth from scattered notes to an integrated text was a natural process if a gradual one The content of the book addresses three objectives first I have tried to avoid demographic methods that are now dated In some chapters that has meant concentrating on formulas most demographers recognize In the chapters on life tables it meant testing competing formulas on a variety of real and synthetic data sets and dropping or relegating to footnotes those that were least accurate Second I have attempted to give readers a sense of the limits of different formulas and methods I am a terse writer however and for the reader that means most sentences carry weight Chapters should be read attentively with careful regard to commentary as well as to formulas and examples Finally I have tried to make the principal methodologies of the book accessible by offering explanations for formulas that are not obvious by keeping examples to the forefront and by placing relatively specialized topics in chapter appendices
