Recent Advances In Fourier Analysis And Its Applications:

Recent Advances in Fourier Analysis and Its Applications J.S. Byrnes, 2012-12-06 This volume contains papers presented at the July 1989 NATO Advanced Study Institute on Fourier Analysis and its Applications The conference held at the beautiful Il Ciocco resort near Lucca in the glorious Tuscany region of northern Italy created a dynamic in interaction between world renowned scientists working in the usually disparate communities of pure and applied Fourier analysts The papers to be found herein include important new results in x ray crystallography by Nobel Laureate Herbert Hauptman the application of the new concept of bispectrum to system identification by renowned probabilist Athanasios Papoulis fascinating applications of number theory in Fourier analysis by eminent electrical engineer Manfred R Schroeder and exciting concepts regarding polynomials with restricted coefficients by foremost mathematical problem solver Donald J Newman The remaining papers further illustrate the inherent power and beauty of classical Fourier analysis whether the results presented were sought as an end in themselves or whether these classical methods were employed as a tool in illustrating and solving a particular applied problem From antenna design to concert hall acoustics to image and speech processing to unimodular polynomials each conference participant benefited significantly from his or her exposure in many cases for the first time to those scientists on the other end of the spectrum from themselves The purpose of this volume is to pass those benefits on to the reader

Harmonic Analysis and Applications Christopher Heil, 2007-08-02 This volume is dedicated to John Benedetto It seems just yesterday that we celebrated his 60th birthday in a memorable conference in College Park Yet that was October of 1999 and already more than six years have passed But John is still too young to be fully honored by a single foreword or even a single volume that attempts to summarize the impact of his work on harmonic analysis his students and his coworkers Given his continuing high and even increasing level of activities his list of lifetime achievements is surely far from complete Even so we will make an attempt in this foreword to take a look back to see the major lines of his work and activities during the past 40 years of his life as a scientist and to learn from his biography and bibliography how the field of harmonic analysis has changed over the years and in particular to see the vibrant role that John has taken in this process John's first paper appeared in 1965 when he was 25 years old and his first book the Springer Lecture Notes on Harmonic Analysis on Totally D connected Sets when he was 31 By that time he had already published on the subjects of Tauberian algebras in the theory of generalized functions and on questions related to spectral synthesis His work on this latter topic continued through the 1970s culminating in the insightful volume Spectral Synthesis 1975 Only a year later his text Real Variables and Integration with Historical Notes appeared
