Receptor Subunits And Complexes:

Receptor Subunits and Complexes A. Burgen, E. A. Barnard, 1992-06-18 This volume provides a wide ranging review of the variety and specificity of receptors including those for neurotransmitters hormones growth factors oncogenes and antigens and looks in depth at the fundamental features of multi subunit complexes and their vital role in coordinating and controlling the functions of the body These receptors for hormones and drugs are mostly constituted from protein subunits They may be organised as ligand operated ion channels in a cell membrane or they may be concerned with enzyme activation to generate second messengers or DNA transcription following a change in the association disassociation state of the receptor complex Advances at the molecular level have enabled scientists to relate the structure of these receptor subunits to their specific mode of action and their function and this in turn is leading the way forward to exciting new research with important medical consequences for the treatment of disease The fourteen chapters in this volume summarise these advances across a wide range of disciplines and the resulting publication will therefore be of interest to research scientists in endocrinology immunology pharmacology oncology and neurobiology

The truth in complexes: why unraveling ion channel multi-protein signaling nexuses is critical for understanding the function of the nervous system Leigh Anne Swayne, Christophe Altier, Gerald W. Zamponi, 2015-04-15 In the search for simple explanations of the natural world its complicated textures are often filed down to a smoothened surface of our liking The impetus for this Research Topic was borne out of a need to re ignite interest in the complex in this case in the context of ion channels in the nervous system Ion channels are the large proteins that form regulated pores in the membranes of cells and in the brain are essential for the transfer processing and storage of information These pores full of twists and turns themselves are not just barren bridges into cells More and more we are beginning to understand that ion channels are like bustling medieval bridges packed with apartments and shops rather than the more sleek modern variety they are dynamic hubs connected with many structures facilitating associated activities Our understanding of these networks continues to expand as our investigative tools advance Together these articles highlight how the complexity of ion channel signaling nexuses is critical to the proper functioning of the nervous system

Addictions David Belin,2012-10-19 Addiction increasingly perceived as a heterogeneous brain disorder is one of the most

peculiar psychiatric pathologies in that its management involves various often non overlapping resources from the biological psychological medical economical social and legal realms Despite extensive efforts from the players of these various fields to date there are no reliably effective treatments of addiction This may stem from a lack of understanding of the etiology and pathophysiology of this disorder as well as from the lack of interest into the potential differences among patients in the way they interact compulsively with their drug This book offers an overview of the psychobiology of addiction and its current management strategies from pharmacological social behavioural and psychiatric points of view
