Minority Serving Institutions National Academies of Sciences, Engineering, and Medicine,Policy and Global Affairs,Board on Higher Education and Workforce,Committee on Closing the Equity Gap: Securing Our STEM Education and Workforce Readiness Infrastructure in the Nation's Minority Serving Institutions,2019-03-05 There are over 20 million young people of color in the United States whose representation in STEM education pathways and in the STEM workforce is still far below their numbers in the general population Their participation could help re establish the United States preeminence in STEM innovation and productivity while also increasing the number of well educated STEM workers There are nearly 700 minority serving institutions MSIs that provide pathways to STEM educational success and workforce readiness for millions of students of color and do so in a mission driven and intentional manner They vary substantially in their origins missions student demographics and levels of institutional selectivity But in general their service to the nation provides a gateway to higher education and the workforce particularly for underrepresented students of color and those from low income and first generation to college backgrounds The challenge for the nation is how to capitalize on the unique strengths and attributes of these institutions and to equip them with the

resources exceptional faculty talent and vital infrastructure needed to educate and train an increasingly critical portion of current and future generations of scientists engineers and health professionals Minority Serving Institutions examines the nation's MSIs and identifies promising programs and effective strategies that have the highest potential return on investment for the nation by increasing the quantity and quality MSI STEM graduates This study also provides critical information and perspective about the importance of MSIs to other stakeholders in the nation's system of higher education and the organizations that support them *Departments of Labor, Health and Human Services, Education, and Related Agencies Appropriations for 2008* United States. Congress. House. Committee on Appropriations. Subcommittee on the Departments of Labor, Health and Human Services, Education, and Related Agencies, 2007 *Long Lives Are for the Rich* Jan Baars, 2023-07-26 *Long Lives Are for the Rich* is the title of a silent ominous program that affects the lives of millions of people In all developed countries disadvantaged and especially poor people die much earlier than the most advantaged During these shorter lives they suffer ten to twenty years longer from disabilities or chronic disease This does not happen accidentally health inequalities including those between healthy and unhealthy life styles are mainly caused by social inequalities that are reproduced over the life course This crucial function of the life course has become painfully visible during its neoliberal reorganization since the early 1980s Studies about aging over the life course from birth to death show the inhumane consequences as people get older In spite of the enormous wealth that has been piled up in the US for a dwindling percentage of the population there has been growing public indifference about the needs of those in jobs with low pay and high stress but also about citizens from a broad middle class who can hardly afford high quality education or healthcare However this ominous program affects all recent mortality rates show that all Americans including the rich are unhealthier and dying earlier than citizens of other developed countries Moreover the underlying social inequalities are tearing the population apart with nasty consequences for all citizens including the rich Although the public awareness of the consequences has been growing neoliberal policies remain tempting for the economic and political elites of the developed world because of the enormous wealth that is flowing to the top All this poses urgent questions of social justice Unfortunately the predominant studies of social justice along the life course help to reproduce these inequalities by neglecting them This book analyzes the main dynamics of social inequality over the life course and proposes a theory of social justice that sketches a way forward for a country that is willing to invest in its greatest resource the creative potential of its population
