Estimating and Displaying Shortrun Costs of Soil Conservation Practices Daryll D. Raitt, 1981 A computerized system is presented for estimating and displaying shortrun costs of alternative combinations of soil conservation practices for specific soils Erosion rates costs per acre and costs per ton reduction of erosion are displayed in a schematic diagram that permits one to observe the cumulative effects of adding practices to an initial practice Combinations of practices are ranked by the cost per ton reduction and cost per acre The reduction in erosion versus cost per acre or per ton reduction can also be displayed The model also computes the effects of incremental changes in underlying conservation input costs on per acre practice costs **Wallaces Farmer**, 2001 Soil and Water Conservation Advances in the United States Teddy Michael Zobeck, 2010 Have agricultural management efforts begun in the desperation of the Dust Bowl brought us to where we need to be tomorrow Questions about the environmental footprint of farming make this book required reading Approximately 62% of the total U S land area is used for agriculture and this land also provides critical ecosystem functions Authors from each region of the continental United States describe the progress of soil and water conservation to date and visualize how agricultural production practices must change in future years to address the newest challenges **Green Technologies for a More Sustainable Agriculture** James Hrubovcak, 1999 **Managing Agricultural Greenhouse Gases** Mark Liebig, A.J. Franzluebbers, Ronald F Follett, 2012-06-08 In 2002 the USDA Agricultural Research Service ARS developed a coordinated national research effort called GRACEnet Greenhouse gas Reduction through Agricultural Carbon Enhancement network to provide information on the soil C status and GHG emission of current agricultural practices and to develop new management practices to reduce net GHG emission and increase soil C sequestration primarily from soil management Managing Agricultural Greenhouse Gases synthesizes the wealth of information generated from the GRACEnet project in over 30 ARS locations throughout the US and in numerous peer reviewed articles Although GRACEnet is an ARS project contributors to this work include a variety of backgrounds and reported findings have important international applications For example many parts of the world possess similar ecoregions to the U S e g northern Great Plains is similar to the Argentina Pampas and Ukraine Steppe **Soil Carbon Management** John M.
